

ADMINISTRATIVE ACTION  
TYPE 2 CATEGORICAL EXCLUSION

Florida Department of Transportation

DESOTO BRIDGE FROM 21ST AVE W TO US 19 BRIDGE #130053

District: FDOT District 1

County: Manatee County

ETDM Number: 14510

Financial Management Number: 442630-1-21-01

Federal-Aid Project Number: N/A

Project Manager: Steven Anthony Andrews

The Environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the the Florida Department of Transportation (FDOT) pursuant to 23 U.S.C. § 327 and a Memorandum of Understanding (MOU) dated May 26, 2022 and executed by the Federal Highway Administration and FDOT.

This action has been determined to be a Categorical Exclusion, which meets the definition contained in 40 CFR 1508.4, and based on past experience with similar actions and supported by this analysis, does not involve significant environmental impacts.

Signature below constitutes Location and Design Concept Acceptance:

Figure 1-1 - Project Location Map

# 1. Project Information

## 1.1 Project Description

This project involves the reconstruction of the DeSoto Bridge (DeSoto) [Structure Number 130053] along State Road (SR) 55/US 301/US 41 (SR 55). The limits of the improvements are from Manatee Avenue East (SR 64) in the City of Bradenton to Haben Boulevard in the City of Palmetto, covering a distance of 1.3 miles and serving as one of the three bridge crossings connecting the cities of Bradenton and Palmetto. A project location map is provided in **Figure 1-1**. The purpose of this study is to address structural deficiencies, system linkages, and modal interrelationships. Construction is scheduled for year 2027, and less than an acre of right of way will be acquired for the project.

### Existing Conditions

SR 55 is classified as an Urban Principal Arterial within the project limits and falls within the 2020 Urban Area Boundary for Manatee County in the Cities of Bradenton and Palmetto. The context classification for SR 55, is C3C-Suburban Commercial. The project corridor's current design and posted speeds are 50 miles per hour (mph).

The existing bridge is a mid-level fixed structure that consists of two 12-foot travel lanes in each direction, totaling four lanes, separated by a four-foot median with a concrete barrier in the middle. Additionally, it has a 2-foot outside shoulder and a 3.5-foot raised traffic railing. The bridge measures 62 feet-1 inch in width, 2,225 feet in length, and comprises 30 concrete approach spans along with three steel main spans, as shown in **Figure 1-2**. Currently, no bicycle or pedestrian facilities are present on the bridge.

**Figure 1-2 - Existing Bridge Typical Section**

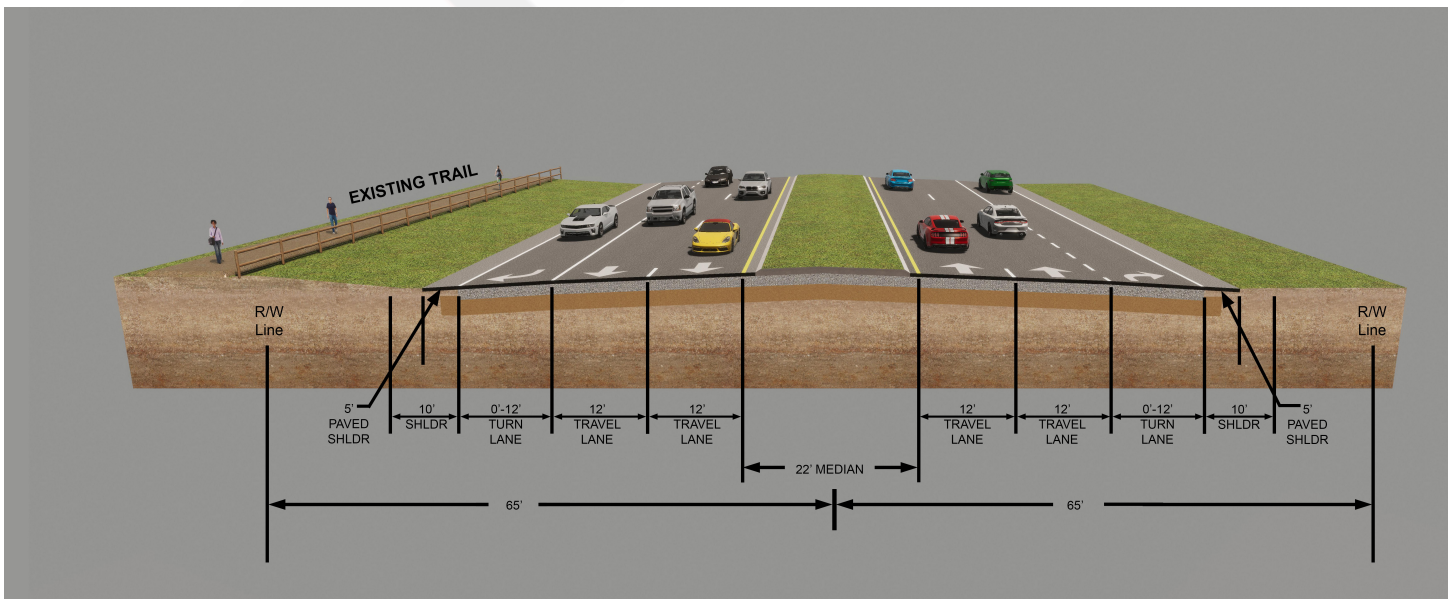

The southern landside urban segment roadway features include two 12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders, and right turn lanes as shown in **Figure 1-3**. There is a short section of sidewalk in the southbound direction near the beginning of the project.

**Figure 1-3 - Existing Typical Section south of bridge**

The northern landside segment rural roadway features include two 12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders that transitions to a 22-foot median with five-foot outside paved shoulders, as shown in **Figure 1-4**. There is a short segment of sidewalk in front of the 7-Eleven convenience store. While no transit service operates north-south within the project limits, the Manatee County Area Transit (MCAT) Route 3- Manatee Avenue does operate along SR 64.

**Figure 1-4 - Existing Typical Section north of bridge**

**Preferred Alternative**

The Preferred Alternative involves the demolition of the existing bridge and the construction of a new bridge east of the existing bridge. The southbound half of the new bridge would begin construction independent of the existing bridge, with a centerline shift of approximately 41 feet to the east. This will allow approximately 10 feet of spacing between the new and old bridges to maintain existing traffic on the existing bridge and roadway while construction of the new bridge commences without interference. The preferred bridge typical section includes two 12-ft travel lanes, 10-ft inside shoulder, 12-ft outside shoulder, and a 12-ft shared-use path in each direction. The shared use path will be separated by a concrete barrier, as shown in **Figure 1-5**. The proposed bridge deck elevation at the center of the bridge will be approximately four feet higher than the existing bridge to meet the required 40-foot vertical clearance. The design and posted speed limits for the Preferred Alternative will also be 45 mph from the begin project to the begin bridge, then 50 mph across the bridge to the end of the project.

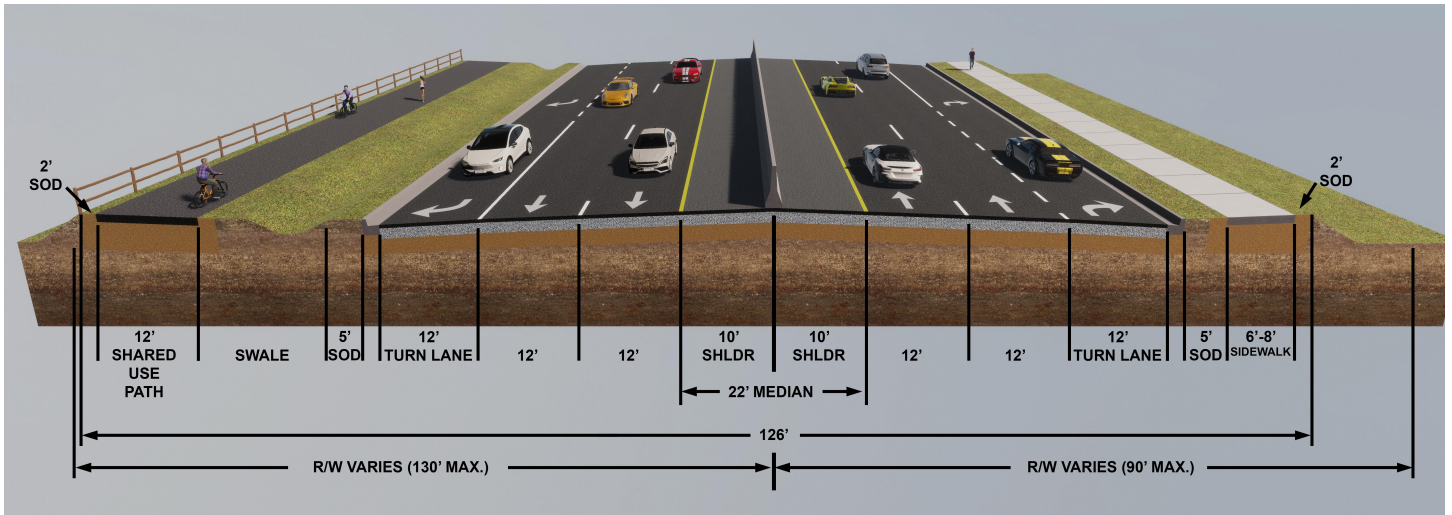

**Figure 1-5 - Preferred Bridge Typical Section**

The preferred southern landside urban segment roadway features include two 12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders, and right turn lanes with a shared use path near the right of way line southbound, and sidewalk northbound as shown in **Figure 1-6**. Additional right of way will be required at the southern end of the project to provide sidewalk connectivity, which will transition to a 12-foot shared-use path to cross the bridge and go to the Bradenton Riverwalk and Bradenton Riverwalk Skatepark.

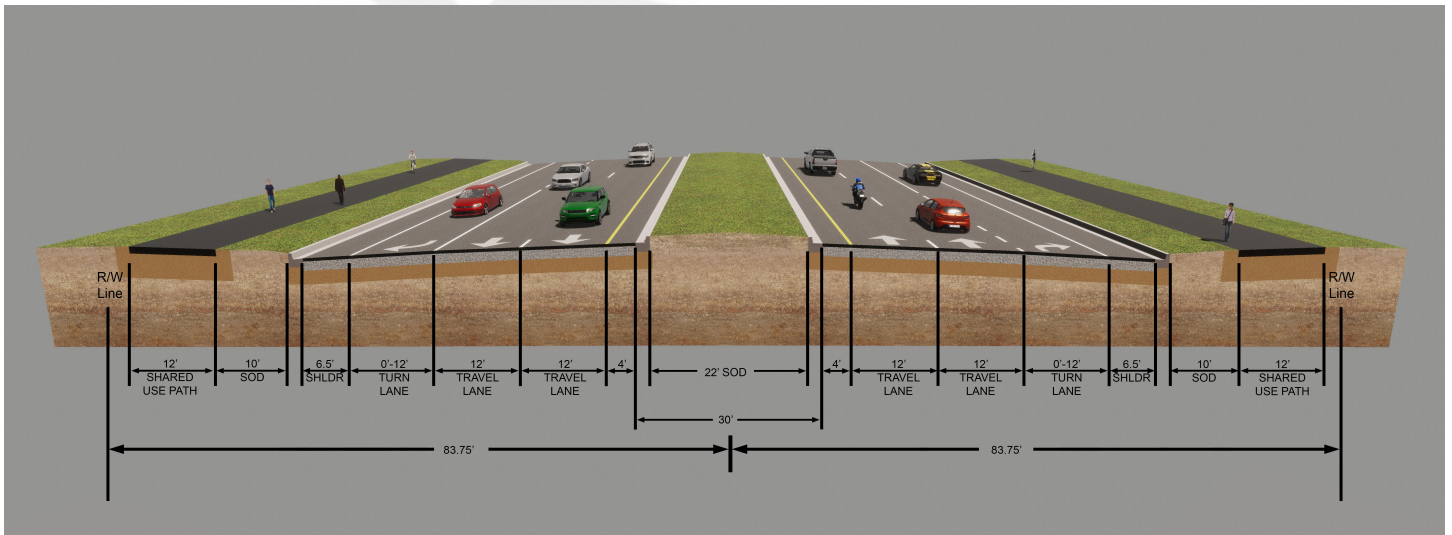

**Figure 1-6 - Preferred Typical Section south of bridge**

The preferred northern landside segment sub-urban roadway features include two-12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders that transitions to a 22-foot median with Type E curb & gutter, 4-foot inside shoulders, 6-foot outside shoulders, Type E curb & gutter, with a 12-foot shared use path near the right of way line as shown in **Figure 1-7**. Additional right of way will be required at the project's northern end to incorporate the shared use path.

**Figure 1-7 - Preferred Typical Section north of bridge**

Design variations for border width near Manatee Memorial Hospital will be required for the Preferred Alternative.

## 1.2 Purpose and Need

The purpose of this project is to address the structural degradation and substandard design elements of the existing DeSoto Bridge located between SR 64 and Haben Boulevard within the Cities of Bradenton and Palmetto in Manatee County. Other goals of the project are to 1) maintain a critical link for regional travel and 2) accommodate multimodal activity within the area. The need for the project is based on the following criteria:

### Bridge Deficiencies

As noted within a FDOT District One 2020 Summary regarding the condition of the DeSoto Bridge, the bridge has exceeded its design life of 50 years. The bridge superstructure comprises 1950s pre-American Association of State Highway and Transportation Officials (AASHTO) standards post-tensioned (PT) concrete beams reinforced with steel PT bars. These beams have a long history of problems in Florida and are of concern due to their tendency to excessively deteriorate and possibly fail. Although corrosion has not seriously impacted the anchorage of the bridge beams to date, corrosion has been identified on the beam end anchorage zones. The substructure is also rapidly deteriorating; gunite repairs previously performed on the footers are now failing on 93% of the footers.

In addition, as revealed through an assessment of the bridge conducted by FDOT District One in March 2019 (which included corrosion testing of the concrete bridge material and rate of future corrosion progression), DeSoto Bridge falls on the low end of the fair condition per National Bridge Inspection ratings (with poor, fair, and good serving as the ratings). The substructure elements that were tested exceed the threshold levels (at levels two to three times higher) for chloride intrusion and for corrosion potential concentrations. There is evidence that the high chloride contamination levels in the existing concrete are causing recent concrete repairs to fail prematurely; the pier columns and footings have reached a point where repairing concrete materials is no longer an option to provide long-term corrosion control.

The existing DeSoto Bridge does not meet current FDOT design standards as it lacks both inside and outside shoulders as well as bicycle and pedestrian facilities. According to the 2023 FDOT Design Manual, the typical section for this type of bridge should feature 12-foot lanes, 10-foot outside shoulders, and 6-foot inside shoulders. Sidewalks and/or bicycle facilities should also be considered to allow for the safe movement of pedestrians and bicyclists along the bridge. The lack of inside and outside shoulders on the bridge restricts the ability of drivers to avoid hazards or react to changing driving conditions within the directional travel lanes without causing direct impacts. In addition, due to the current configuration of the bridge, there is limited space for an emergency service vehicle to pass to respond to a situation during periods of congestion or to accommodate a maintenance vehicle or disabled vehicle to prevent it from obstructing traffic flow.

### System Linkages

The DeSoto Bridge is integral to facilitating the movement of regional commuter, visitor, and freight traffic as one of three crossings over the Manatee River on Florida's west coast. According to United States Census Longitudinal Employer-Household Dynamics (LEHD) data, there are a total of 10,633 jobs provided within a quarter mile of the project corridor; 99.7% of these jobs are filled by individuals who commute from outside the quarter-mile area. As such, much of this workforce/regional traffic (over 30% according to the Central Manatee Network Alternatives Analysis Origin-Destination Study Technical Memorandum) uses the DeSoto Bridge and the other limited number of Manatee River crossings to access the provided jobs. This percentage is anticipated to increase as Sarasota and Manatee Counties are expected to reach a regional population of over 1.1 million by 2050.

In addition, Transform 2045 (the Sarasota/Manatee Metropolitan Planning Organization's (MPO) Long Range Transportation Plan (LRTP)) identifies the safe and convenient crossing of the Manatee River as a major transportation concern. The plan notes that improvements to the river crossings are critical in maintaining access between the region

and Tampa Bay. Transform 2045 lists US 301 and US 41 as two of the primary surface transportation routes used to transport goods to and through the region, underscoring the importance of the project link to the local and regional economies and associated transportation network.

Maintaining and enhancing this regional link is vital to commuters, visitors, and freight providers in providing access to area jobs, tourist destinations, and distribution centers. This connection is also essential for area residents to access essential services north and south of the river.

**Modal Interrelationships**

Currently, no pedestrian or bicycle facilities are present on the DeSoto Bridge. The closest crossing of the Manatee River with bicycle and pedestrian accommodations is the Green Bridge (US 41 Business/8th Ave) located a half a mile to the west. In addition, no transit service operates north-south on the project corridor; only one Manatee County Area Transit (MCAT) bus route [Route 3-Manatee Avenue] operates along SR 64 [the southern project limit], crossing the project corridor twice.

The current and projected increase in population growth, the concentrated efforts by both cities to invest in and revitalize their respective older central cores [via a designated Opportunity Zone in the City of Bradenton and a Community Redevelopment Area in the City of Palmetto], and the appeal of destinations within the area to tourists [i.e. Bradenton Area Convention Center and waterfront recreational features] have created latent demand for increased bicycle and pedestrian activity in the area. In addition, an extensive transit dependent population [consisting of individuals that are low-income under/just at driving age, or otherwise unable to drive, and housing units with no vehicle available] is present at the bridge approaches; this population has a higher propensity to walk, bike, or take transit to access essential services. These identified aspects reinforce the critical need for multimodal transportation options to be provided in the area. Bicycle and pedestrian facilities potentially included as part of the proposed replacement bridge are anticipated to enhance multimodal connectivity and access across the Manatee River and help attain local planning goals.

**1.3 Planning Consistency**

**USCG Permit**

- A USCG Permit IS NOT required.
- A USCG Permit IS required.

\* **Impact Determination:** Yes = Significant; No = No Significant Impact; Enhance = Enhancement; NoInv = Issue absent, no involvement. Basis of decision is documented in the following sections.

### 3. Social and Economic

The project will not have significant social and economic impacts. Below is a summary of the evaluation performed.

#### 3.1 Social

The project will not have significant social and economic impacts. Below is a summary of the evaluation performed.

The project was screened through the Environmental Screening Tool (EST) as part of the Efficient Transportation Decision Making (ETDM) Programming Screen phase (ETDM #14510). Socio-economic data was generated as part of the screening event used for the Final ETDM Programming Screen Summary Report (published July 5, 2023), available in the project file. The July 2023 ETDM Report evaluated potential improvements for the DeSoto Bridge Replacement. Using a 500-foot evaluation buffer, the project's study area covers approximately 0.276 square miles (approximately 177 acres).

#### Population

The Sociocultural Data Report prepared for the DeSoto Bridge project utilized 2017-2021 American Community Survey (ACS) 5-Year Estimates for the Census Block Groups located within the 500-foot project area buffer. This Census Block Group data within the buffer area was examined to identify the presence or absence of minority populations and to identify potential disproportionate impacts. Total and minority population data is presented in **Table 3-1**.

The demographic information indicates a minority population of 146 individuals comprising approximately 32.2% percent of the population within the project buffer area. Meanwhile, ACS data indicates that Manatee County contains a minority population comprising 29.82% of the total population.

**Table 3-1 - Minority Population**

Geographic Area	Total Pop.	Not Latino or Hispanic							Hispanic or Latino of Any Race
		White	Black / African American	AIAN	Asian	NHPI	Other Race	Two or More Races	
500 ft Buffer (0.276 sq miles)	453	349	57	0	33	0	5	6	52
<b>TOTAL Percent</b>	<b>100%</b>	<b>77.0%</b>	<b>12.6%</b>	<b>0%</b>	<b>7.3%</b>	<b>0%</b>	<b>1.1%</b>	<b>1.3%</b>	<b>11.5%</b>

#### Income and Poverty Status

Census Block Group data from the Socioeconomic Data Report was evaluated for low-income populations. The median household income and households below the poverty status were examined to identify the presence or absence of low-income populations in the project buffer and identify potential disproportionate impacts. The poverty level was determined based on the 2021 US Department of Health and Human Services poverty threshold of \$26,500 for a family of four. **Table 3-2** presents the estimated median family income, median household income, and households and population below the poverty level within buffer area.

**Table 3-2 - Low Income Populations**

<b>Geographic Area</b>	<b>Median Family Income (dollars)</b>	<b>Median Household Income (dollars)</b>	<b>Population below Poverty Level</b>	<b>Households below Poverty Level</b>
500 ft Buffer (0.276 sq miles)	\$45,984	\$55,768	13.91%	10.81%

Notes:

- (1) Geographic Area was determined to be the 500 ft project buffer area.
- (2) Households below the poverty level were determined based on 2017-2021 American Community Survey 5-Year Estimates and 2021 US Department of Health and Human Services poverty threshold of \$26,500 for a family of four.

**Limited English Proficiency**

The Socioeconomic Data Report, comprising of data from the 2017-2021 ACS 5-Year Estimates, was reviewed for language spoken at home by ability to speak English for the population 5 years and above. Within the project buffer, approximately 5.4 percent of the population 5 years old and above speaks English "less than very well."

As part of the project's Public Involvement Plan (PIP), accommodations were made to ensure compliance with Title VI of the U.S. Civil Rights Act of 1964 and other related statutes. Informational materials, such as newsletters and fact sheets, were developed in bilingual format, and public meetings were advertised upon the FDOT's request and approval.

The Preferred Alternative will not have an impact on LEP populations within or adjacent to the project buffer area.

**Community Cohesion**

Existing residential land uses are sporadic and generally occur at the beginning and end of the study limits, predominantly in the form of apartments and condominiums. The Preferred Alternative is not expected to cause permanent negative impacts to community cohesion. Although acquisition of right-of-way (ROW) will be necessary for the project, no neighborhoods or communities within the project study area will be bisected. Minor direct impacts will be confined to parcels immediately adjacent to the corridor, including minor ROW acquisitions. The proposed improvements are not anticipated to lead to residential relocations or business displacements.

The Preferred Alternative will not impact any important resources that contribute to community cohesion. It will have beneficial impacts on community cohesion by providing improved mobility and connectivity for pedestrians and bicyclists.

A sidewalk and/or shared-use path are proposed on both sides of the road throughout the project limits.

**Community Facilities and Services**

Community facilities within the project study area include one Development of Regional Impact [Riviera Dunes Resorts (ADA No: 1999-012) - approved with conditions], one aviation transportation facility [Manatee Memorial Hospital Helistop], one civic center [Bradenton Area Convention Center], one hospital [Manatee Memorial Hospital], five health care facilities, one fire station [Manatee County Rescue Station 16], one existing recreational trail [Manatee River Trail] - part of the Office of Greenways and Trails paddling trail opportunity [Paddle Manatee Trails Corridor], three local park and recreational facilities [Veterans Memorial Park, Bradenton Riverwalk Park/Bradenton Riverwalk, and Palmetto Estuary Preservation Project (also a Florida Managed Area) - the latter two parks are also National Park Projects], State of Florida owned land that primarily surrounds the Palmetto Estuary Preservation Project and cultural resources. Access to these facilities will be maintained during and after construction, as required by FDOT's Standard Specifications for Road and Bridge Construction.

The proposed improvements and bridge replacement will improve overall travel reliability as emergency response will improve due to the wide inside and outside shoulders.

### **3.2 Economic**

The project segment of the SR 55 corridor serves critical north-south movement across the Manatee River, between the cities of Bradenton and Palmetto. The bridge facilitates significant commuter, visitor, and freight traffic at the regional and local levels as it connects to other major arterials and highways and provides access to area jobs, essential services, tourist destinations, and freight distribution centers. The project corridor specifically supports many hotels, restaurants, waterfront recreational features, as well as the Bradenton Area Convention Center. Major area employers include the Bradenton Area Convention Center, Manatee Memorial Hospital, and Manatee County Schools.

Benefits associated with the Preferred Alternative increased accessibility, and multimodal connectivity. By bringing the existing bridge up to current standards through the provision of bicycle and pedestrian facilities and wider shoulders, the project is expected to enhance access to businesses and the connection to employment opportunities and essential services, particularly for transportation disadvantaged populations. There will be no adverse impacts to businesses, or the tax base within the project area; therefore, the Preferred Alternative is expected to have minimal economic impacts along the project corridor.

### **3.3 Land Use Changes**

The proposed improvements associated with the Preferred Alternative are compatible with both the Bradenton and Palmetto Comprehensive Plans and support their respective plans' Future Land Use Elements. According to the City of Bradenton 2030 Comprehensive Plan Future Land Use Map (see attachment) and the City of Palmetto Future Land Use Map (see attachment), the project area will remain urbanized with predominantly commercial, retail, institutional, community recreational areas, high density residential, and undeveloped/ open land uses.

The City of Bradenton designates the areas within the study area and within its jurisdiction as Urban Central Business District according to the 2010-2030 Future Land Use Map. The portion of the project that falls within the jurisdiction of the City of Palmetto designates areas within the study area as Public Use and Planned Community according to their respective future land use map.

The area surrounding the existing corridor north of the DeSoto bridge is mostly undeveloped land zoned for community development and open land reserved for public use. The Riviera Dunes community is set back approximately 48 feet from SR 55 and contains undeveloped lots and a 7-Eleven at the corner of Haben Blvd and SR 55. Palmetto Estuary Preserve and Palmetto Bridge Park are two open space areas located to the west of SR 55 and south of 1st Street East.

The area south of the bridge contains a mixture of commercial, retail, community recreation, high-density residential, and institutional land use, with Manatee Memorial Hospital located to the east of SR 55. The Bradenton Riverwalk and the Bradenton Riverwalk Skatepark are located immediately north of the southern bridge approach.

The proposed improvements associated with the Preferred Alternative are not anticipated to affect land use in the area. The character of the study area remains unchanged and will continue to support the existing and future land uses within the project and surrounding area, maintaining the goals of the City of Bradenton and the City of Palmetto's respective

Future Land Use Maps.

### 3.4 Mobility

The Preferred Alternative aims to enhance multimodal connectivity through the implementation of 12-foot shared-use paths on either side of the DeSoto Bridge. South of the bridge, there will be 6 to 8 feet sidewalks on both sides of US 55, connecting to the 12-foot shared-use path at the southern bridge approach. The east shared-use path will link to Riverfront Boulevard, providing pedestrians and cyclists access to community recreational spaces along the waterfront including the Bradenton Riverwalk Skatepark and Bradenton Riverwalk. The 12-foot shared-use paths will extend north of the bridge on both sides of US 55, concluding at Haben Boulevard. These improvements will also facilitate connections to the unofficial recreational area east of SR 55 (within FDOT property), and the Palmetto Estuary Preserve. See **Table 3-3** for the existing pedestrian facilities within the project limits.

**Table 3-3 Existing Pedestrian Facilities within the Project Study Limits**

Limits	East Side	West Side
SR 64 to 3rd Avenue West	N/A	5-ft sidewalk
In front of 7-Eleven	5-ft sidewalk	N/A

Existing bicycle facilities for the project portion of SR 55 are shown in **Table 3-4**.

**Table 3-4 Existing Bicycle Facilities within the Project Study Limits**

Limits	East Side	West Side
North of bridge to Haben Blvd.	5-ft paved shoulder	5-ft paved shoulder

### 3.5 Aesthetic Effects

The area surrounding the proposed project consists primarily of commercial, vacant, and recreational land uses. The view of the Manatee River is considered a unique visual resource in the project corridor. Notable stakeholders that may be sensitive to the aesthetic effects of the project include the Riviera Dunes and recreational users (i.e., boaters). SR 55 is along the Tamiami Trail - Widows to the Gulf Coast Waters scenic highway/byway.

Visual impacts associated with clearing and grubbing, storage of construction materials and equipment, and establishment of temporary construction facilities may occur but are expected to be minimal and temporary in nature. Disturbed areas will be restored to existing or better condition after the completion of construction activities. No construction staging will be allowed within the Palmetto Estuary Preserve.

The Preferred Alternative is not anticipated to alter or obstruct scenic views associated with agricultural features in the project study area. Permanent aesthetic effects and changes to the existing viewshed (both from the bridge and from land and water) are anticipated to be minimal, given that the vertical profile of the bridge is not anticipated to change.

### **3.6 Relocation Potential**

While the proposed replacement of the DeSoto Bridge is to be in-kind, additional right-of-way is anticipated to accommodate elements (such as shoulders and bicycle and pedestrian facilities) that will bring the bridge up to current standards. Therefore, no relocations are expected at this time. The Preferred Alternative will be constructed on lands currently owned by the property owners shown in **Table 3-5** below.

The proposed project, as presently conceived, will not displace any residences or businesses within the community. Should this change over the course of the project, a Right of Way and Relocation Assistance Program will be carried out in accordance with Florida Statute 421.55, Relocation of displaced persons, and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (Public Law 91-646 as amended by Public Law 100-17).

### **3.7 Farmland Resources**

Through coordination with the Natural Resources Conservation Service, it has been determined that the project area which is located in the urbanized area of Manatee County Urban Boundary does not meet the definition of farmland as defined in 7 CFR Part 658. Therefore, the provisions of the Farmland Protection Policy Act of 1981 do not apply to this project.

## 4. Cultural Resources

The project will not have significant impacts to cultural resources. Below is a summary of the evaluation performed.

### 4.1 Section 106 of the National Historic Preservation Act

A Cultural Resource Assessment Survey (CRAS), conducted in accordance with 36 CFR Part 800, was performed for the project, and the resources listed below were identified within the project Area of Potential Effect (APE). FDOT found that these resources do not meet the eligibility criteria for inclusion in the National Register of Historic Places (NRHP), and State Historic Preservation Officer (SHPO) concurred with this determination on 01/18/2024. Therefore, FDOT, in consultation with SHPO, has determined that the proposed project will result in No Historic Properties Affected.

For this study, the archaeological APE was defined as the footprint of construction within the existing ROW, while the historical/architectural APE was set based on east and west replacement bridge alternatives. The architectural history of APE includes the archaeological APE, which was expanded to the property lines of parcels adjacent to the right-of-way or a distance of no more than 100 meters (328 feet) from the right-of-way line.

The archaeological survey consisted of pedestrian reconnaissance, which indicated subsurface testing was not possible due to the presence of marked buried utilities, steep artificial slopes, and drainage structures throughout the archaeological APE. No artifacts were recovered, and no archaeological sites or features were identified within the archaeological APE. No further archaeological survey in support of the proposed project.

The architectural history survey resulted in the identification and evaluation of one newly recorded historic building (8MA02569) within the architectural history APE. Historic building 8MA02569 lacks the architectural distinction and significant historical associations necessary to be considered for listing in the NRHP and is considered ineligible.

No historic districts were identified therefore, no further architectural history survey. No NRHP-listed or eligible cultural resources were identified within the project APE, therefore no further cultural resources work for the DeSoto Bridge Replacement project is required. Furthermore, a Tribal consultation was initiated during the initial environmental review of the project and resulted in no comments received from any of the Tribes contacted.

Based on the results of this study, the FDOT's determination was that the proposed undertaking would result in no historic properties affected. The FDOT submitted the December 2023 CRAS and the "no effect" determination to the SHPO on December 20, 2023. SHPO provided their concurrence with the FDOT's findings on January 25, 2024. The CRAS is available in the project file. The SHPO concurrence letter is included as an attachment to this document.

### 4.2 Section 4(f) of the USDOT Act of 1966, as amended

The following evaluation was conducted pursuant to Section 4(f) of the U.S. Department of Transportation Act of 1966, as amended, and 23 CFR Part 774.

Four resources were reviewed for the applicability of Section 4(f). Coordination with the local Officials With Jurisdiction (OWJ) and the FDOT's Office of Environmental Management (OEM) is provided at the end of this document. As a result of the evaluation, there will be no adverse impacts to properties within or immediately adjacent to the project area.

### **Bradenton Riverwalk/Bradenton Riverwalk Skatepark**

The Bradenton Riverwalk is a 1.5-mile stretch of land located between the Green and DeSoto Bridges, along the southern shoreline of the Manatee River. Amenities include a multi-use path, skatepark, beach volleyball courts, restrooms, water fountains, picnic tables/benches, and opportunities for fishing the Manatee River. Through a lease agreement between FDOT and the City of Bradenton, a portion of the skatepark is positioned under the current DeSoto Bridge within FDOT right-of-way. In addition, the Blue Star Memorial is located within FDOT right-of-way. The current lease expires March 20, 2037, and contains a 25-year renewal option. Language in the current lease agreement states that if FDOT modifies, repairs, or replaces the DeSoto Bridge, the lease may be cancelled, the recreational improvements removed, and the land restored to its original condition. The Preferred Alternative will not have any direct use of lands within the Bradenton Riverwalk. However, the FDOT recognizes that Riverwalk facilities are present within the bridge right-of-way and will coordinate the project's design and construction phases with the City of Bradenton.

### **Manatee River Blueway**

The Manatee River Blueway, a FDEP and Manatee County-designated paddling trail that passes under the DeSoto Bridge along the southern shoreline of the Manatee River. This 75-mile water-based trail system supports outdoor recreation, guiding canoeists and kayakers through the County's coastal areas, bays, bayous, and river systems. It can be accessed via a series of boat ramps and connects many points of interest including preserves and parks. The proposed replacement of the DeSoto Bridge over the Manatee River will not affect the Blueway. The project will maintain motorized vessel and paddling boat traffic on the river in the future condition and during construction. No effects to the attributes, features, or activities that qualify the Manatee River Blueway for protection under Section 4(f) are anticipated, and no use of the Blueway will occur.

### **Palmetto Estuary Preserve**

The Palmetto Estuary Preserve consists of three land parcels totaling 35 acres located north of the Manatee River. The two northernmost parcels (totaling 19.7 acres), owned by the City of Palmetto, are located on the west side of SR 55, and the southernmost parcel (15.3 acres), owned by the Florida Communities Trust (FCT) and the Florida Board of Trustees of the Internal Improvement Trust Fund (TIITF) is located both east and west of SR 55 on the north shore of the Manatee River. Of the two northernmost parcels, the southern parcel was subject to a Grant Award Agreement from the FCT in October 1998. Available features within the facility include walking trails, a playground, boardwalk through mangrove estuary, picnic tables/benches, and restrooms. The Preferred Alternative will not result in any direct use impact to this resource. The entrances to the southern parcels, both east and west of SR 55, will be improved as part of the project, thereby improving public access, and providing an enhancement to the preserve.

In summary, no use of either Bradenton Riverwalk, the Bradenton Riverwalk Skatepark, the Manatee River Blueway, or Palmetto Estuary Preserve is anticipated.

## **4.3 Section 6(f) of the Land and Water Conservation Fund Act of 1965**

The following evaluation was conducted pursuant to Section 6(f) of the land and water conservation fund of 1965.

Bradenton Waterfront Park and Palmetto Estuary Preservation Project are National Park Projects protected under the Land and Water Conservation Fund Act of 1965 (LWCF). Both resources have received LWCF grant funding.

The Preferred Alternative will not acquire ROW from Palmetto Estuary Preserve, the Bradenton Riverwalk Park, and the Bradenton Riverwalk Skatepark.

Temporary impacts to these listed Section 6(f) resources include temporary closure during construction and temporary effects from noise, dust, and vibration. However, no permanent adverse impacts are anticipated. The project is expected to have positive effects on accessibility and connectivity due to the inclusion of a shared-use path.

#### **4.4 Recreational Areas and Protected Lands**

This project will have involvement with the following parks and/or recreational resources: the Manatee River Trail (part of the Paddle Manatee Trails Corridor) and three local park and recreational facilities - Veterans Memorial Park, Bradenton Riverwalk Park/Bradenton Riverwalk Skatepark, and Palmetto Estuary Preservation Project, includes 70.98 acres (40.21%) of submerged lands (including eight submerged state land records) within the 500-foot project buffer. The Palmetto Estuary Preserve, and the property northeast of the bridge is a locally owned conservation land managed by the City of Palmetto.

The proposed Preferred Alternative is anticipated to result in the acquisition of zero acres of the Palmetto Estuary Preservation and zero acres of the Bradenton Riverwalk/Bradenton Riverwalk Skatepark. Other anticipated impacts from the Preferred Alternative include the temporary closure of the aforementioned resources during construction, as well as temporary impacts from noise, dust, and vibrations. Permanent adverse impacts are not anticipated with this project. Positive impacts resulting from increased accessibility and connectivity are anticipated with the inclusion of the shared-use path in the project.

## 5. Natural Resources

The project will not have significant impacts to natural resources. Below is a summary of the evaluation performed:

### 5.1 Protected Species and Habitat

The following evaluation was conducted pursuant to Section 7 of the Endangered Species Act of 1973 as amended as well as other applicable federal and state laws protecting wildlife and habitat.

A Natural Resource Evaluation (NRE) was completed to document and present the findings of potential protected species and habitat involvement associated with the proposed Preferred Alternative. On October 7, 2023, an ETDM Programming Screen Summary Report was published, featuring comments from the Environmental Technical Advisory Team (ETAT) regarding the project's impact on natural, physical, and social resources. Comments were also received from USFWS, FWC, and FDACS. These agencies provided feedback and a list of wildlife species that could potentially be present along the proposed alignment or in the nearby regional area based on known range and habitat preferences.

A review of USFWS, FWC, and FNAI data indicates thirty (30) protected wildlife species are known to occur in Manatee County. Eighteen (18) of the species are federally listed as endangered or threatened. Eleven (11) listed species are state-listed, endangered, or threatened. The bald eagle (*Haliaeetus leucocephalus*) was delisted from protection under the Endangered Species Act in 2007. However, the bald eagle is still protected under the Bald and Golden Eagle Protection Act, the Migratory Bird Treaty Act, and State law (Florida Administrative Code [FAC] 68A-16.002). There is one species, the tricolored bat (*Perimyotis subflavus*), that is a proposed candidate for federal listing and has been known to occur in Manatee County. Additionally, multiple species of bats are state-protected by FAC 68A-4.001 General Prohibitions and 68A-9.010 Taking Nuisance Wildlife.

A total of twenty-six (26) federal and state protected plants are known to occur within Manatee County. Of the 26 species, seven (7) plants are federally listed species, and nineteen (19) plants are state-protected species.

To further summarize the results of desktop and field data collection efforts, each potentially occurring species was assigned a likelihood for occurrence of "none", "low", "moderate", or "high" within habitats found in the project study area. Field reviews did not document any observations of protected species.

**Table 5-1** lists the federally and state-protected wildlife and plant species known to occur within Manatee County that could potentially occur near the project area based on availability of suitable habitat and known ranges.

#### Federally Listed Species

Eighteen (18) species are listed by the USFWS as endangered or threatened. Federally listed species are also considered state-listed species. Three of the 18 species, Florida scrub-jay (*Aphelocoma coerulescens*), red-cockaded woodpecker (*Picoides borealis*), and Audubon's crested caracara (*Caracara plancus audubonii*), were determined to have no probability of occurrence due to a lack of suitable habitat within the project study area. Additionally, the project study area is not within the CA for the red-cockaded woodpecker or the Audubon's crested caracara. Therefore, the proposed project will have no effect on these species. The remaining sixteen (16) remaining species are listed in **Table 5-2** with their effect determinations.

Table 5-1 - Federal and State Protected Species

Scientific Name	Common Name	Listing Status		Probability of Occurrence	Effect Determination

E = Endangered

MANLAA = May affect, not likely to adversely affect

1 The tricolored bat is a candidate for listing under the jurisdiction of the USFWS

Six (6) of the seven (7) federally listed plant species have no probability of occurrence within the project area due to lack of suitable habitat; therefore, the proposed project will have no effect on those species. These species include the Florida bonamia (*Bonamia grandiflora*), pygmy fringe tree (*Chionanthus pygmaeus*), Florida goldenaster (*Chrysopsis floridana*), perforate reindeer (*Cladonia perforata*), Britton's beargrass (*Nolina brittoniana*), and chaffseed (*Schwalbea americana*). These species and aboriginal prickly apple (*Harrisia aboriginum*) are included in **Table 5-3**.

**Key:**

USFWS = U.S. Fish and Wildlife Service

T = Threatened

E = Endangered

**State Listed Species**

Twenty-nine (29) wildlife species are listed by FWC as endangered or threatened. Eighteen (18) of the species are also federally listed and discussed above. In-house research and field reviews were conducted evaluating the habitat requirements for each species and the types of habitats present within the project study area. All eleven (11) state-listed species were determined to potentially have a probability of occurrence within the project area. Effect determinations for each species are listed in **Table 5-4** below.

**Table 5-4 Effect Determination for State Listed Wildlife Species**

Scientific Name	Common Name	FWC Designation	Effect Determination

<i>Rynchops niger</i>	Black skimmer	T	No Adverse Effect Anticipated

**Key:**

FWC = Florida Fish and Wildlife Conservation Commission

T = Threatened

Eleven (11) of the nineteen state-listed plant species have no probability of occurrence within the project area due to lack of suitable habitat (**Table 5-1**); therefore, the appropriate effect determination is no effect anticipated for those species. These species include the pinewoods bluestem (*Andropogon arctatus*), many-flowered grass-pink (*Calopogon multiflorus*), Florida tree fern (*Ctenitis sloanei*), Tampa vervain (*Glandularia tampensis*), nodding pinweed (*Lechea cernua*), pine pinweed (*Lechea divaricata*), Florida spiny-pod (*Matelea floridana*), comb polypody (*Pecluma ptilota var. bourgeauana*), large-plumed beaksedge (*Rhynchospora megaplumosa*), toothed maiden fern (*Thelypteris serrata*), and broad-leaved noddingcaps (*Triphora amazonica*). The remaining state-protected plant species effect determinations are listed in **Table 5-5** below. If any listed plants are observed during surveys FDOT will notify FDACS.

**Table 5-5 Effect Determination for State Listed Plant Species**

Scientific Name	Common Name	FDACS Designation	Effect Determination

**Key:**

FDACS = Florida Department of Consumer Services

T = Threatened

E = Endangered

**Other Protected Species**

The bald eagle (*Haliaeetus leucocephalus*) was delisted from protection under the Endangered Species Act in 2007. However, the bald eagle is still protected under the Bald and Golden Eagle Protection Act, the Migratory Bird Treaty Act, and State law. A desktop review of Audubon EagleWatch mapping indicates that there is one documented nest near the proposed project. However, no bald eagle nests are located within the secondary protection zone (660-feet) of the project study area. Therefore, no adverse effects are anticipated for the species. Prior to construction, additional bald eagle surveys will be conducted during the nesting season, to determine nesting status, and coordination with USFWS and FWC will take place, as necessary.

Bats in the state of Florida are protected via F.A.C. 68A-4.001 General Prohibitions, F.A.C. 68A-9.010 Taking Nuisance Wildlife, and F.A.C. 68A-29.002 Regulations Relating to the Taking of Mammals. Solitary bats may roost in small tree cavities or palm fronds while larger colonies of bats may roost in manmade structures such as the joints of bridges. Within the study area are structures which could provide roosting habitat for state-protected bats, primarily within the existing bridge, which is a suitable size for a colony of bats. During field reviews, no evidence of bat utilization was noted within the existing DeSoto Bridge. Bats were observed in the bat boxes at the Palmetto Estuary Park. Bat surveys will be conducted during the design phase to ensure no roosting bats are inhabiting the bridge. If bats are present, bat exclusion would be required due to the proposed bridge replacement activities. Since bats are not currently roosting in the bridge impacts to bats are not anticipated.

**Critical Habitat**

The project study area was evaluated for Critical Habitat (CH) as defined by Congress 50 CFR Chapter IV, Subchapter A, Part 424. The project area falls within U.S. Fish and Wildlife Service (USFWS)-designated CH for the West Indian Manatee (*Trichechus manatus latirostris*). The proposed project will not result in the destruction or adverse modification of CH, and appropriate compensatory mitigation will be provided to offset impacts to wetlands and surface waters within the CH.

**Avoidance and Mitigation**

Compensatory mitigation and conservation measures implemented during construction will offset negative impacts to protected species. The tricolored bat is not likely to roost within the bridge structure. FDOT will continue coordination with USFWS to determine the potential effect to the tricolored bat once a final listing decision has been made. No impacts are anticipated to state or federally protected bats due to the proposed project.

Compensatory mitigation, conservation measures implemented during construction, and the ability of avian species to move away from construction will offset negative impacts to state protected species.

No bald eagle nests are located within the secondary protection zone (660-foot) of the project study area. Therefore, no impacts are anticipated to the species.

No roosting bats were observed within the DeSoto Bridge during field reviews.

Multiple avenues of protection will be employed to negate and minimize any potential effects to federal and state listed species. Some of the measures employed may include detailed surveys and agency coordination during the project design phase, including providing appropriate mitigation to offset impacts. During construction, BMPs, adherence to FDOT's "Standard Specification for Road and Bridge Construction", and use of preconstruction surveys are strategies that will be considered, as needed, for protection of listed species.

The study area occurs within areas of CH for the West Indian manatee. The proposed project will include the replacement of an existing overwater structure and minor impacts to mangroves and surface waters (Manatee River), which provides suitable habitat utilized by manatees. Impacts to mangroves are minor given the small size of impact to mangroves relative to the available habitat in the region. Additionally, compensatory mitigation to offset the loss of similar habitat will be provided. No impact to seagrass is proposed, which is a main food source for manatees. Seagrasses in the vicinity of the bridge will be unaffected by construction. Water depths are shallow around the mangroves swamps but deepen under the main stretch of bridge where pilings will be added. Boat traffic is common within the channel/Manatee River. Impacts to surface waters considered critical habitat will result from the pilings; however, these impacts will be minimal. Impacts to water quality during construction may occur due to pile driving and other in-water work; however, these will be temporary and BMPs will be implemented. For these reasons, it was determined that the Preferred Alternative will **not result in the destruction or adverse modification of critical habitat** for the West Indian manatee.

## 5.2 Wetlands and Other Surface Waters

The following evaluation was conducted pursuant to Presidential Executive Order 11990 of 1977 as amended, Protection of Wetlands and the USDOT Order 5660.1A, Preservation of the Nation's Wetlands.

A Natural Resource Evaluation (NRE) was completed in accordance with Executive Order 11990, Protection of Wetlands, to document and present the findings of potential wetland involvement associated with Preferred Alternative.

Identification and assessment of wetlands and surface waters within and adjacent to the project area was completed. Field investigations were performed to evaluate the presence of wetland vegetation, hydric soils, and hydrologic indicators within the DeSoto Bridge Replacement project corridor. Potential wetland impacts within the project corridor are located on the east side of US 301/ US 41, just north of the northern bridge approach, and are anticipated to be minimal. The Preferred Alternative will cross and shade 36.72 acres of US Army Corps of Engineers (USACE) and Southwest Florida Water Management District (SWFWMD) jurisdictional surface waters (Manatee River). Construction of bridge pilings will result in permanent surface water impacts (<0.10 acre); however, these impacts are considered de minimis and do not require mitigation. A summary of permanent impacts is provided in **Table 5-6** and accounts for all wetlands within the project footprint with potential impacts.

**Table 5-6 - Wetland Impacts**

Location	Habitat (FLUFCS)	Wetland Acreage	Functional Loss Units
East side of US 301, adjacent to northern bridge approach	Mangrove Swamps (6120)	0.31 (permanent)	0.23
		0.71 (secondary)	0.04
<b>Total</b>		<b>1.02</b>	<b>0.27</b>

## **Mitigation**

Jurisdictional determinations and mitigation requirements will be completed during the permitting process as wetlands are subjected to further study, delineation, verification, and survey during the final design. Mitigation will be required by both the United States Army Corps of Engineers (USACE) and the Southwest Florida Water Management District (SWFWMD) for wetland impacts.

All measures to avoid and minimize impacts have been and will continue to be, employed to the maximum extent practicable. FDOT will employ various strategies to fulfill mitigation needs, which may include using approved mitigation banks or restoration, enhancement, preservation, and/or creation of wetlands, either on or off-site. The proposed project is located within the service area of three mitigation banks: Mangrove Point Mitigation Bank, Braden River Mitigation Bank, and Nature Coast Mitigation Bank. Braden River Mitigation Bank and Nature Coast Mitigation Bank are within the SWFWMD basin but are not federally permitted; therefore, the most feasible option is Mangrove Point Mitigation Bank, which has estuarine credits available. These options will be investigated further during the design phase of the project. Any mitigation proposed will be pursuant to Section 373.4137, FS, to satisfy all mitigation requirements of Part IV of Chapter 373, FS, and 33 USC 1344.

## **Secondary and Cumulative Effects**

Indirect, secondary, and cumulative impacts associated with the proposed project would be minor due to the existing bridge in the vicinity. Farther from the roadway, secondary impacts of increased nuisance/exotic vegetation may occur in areas currently designated for offsite stormwater treatment. Species such as Brazilian pepper (*Schinus terebinthifolia*) are particularly aggressive and successful colonizers in disturbed areas; therefore, the disturbance related to construction may allow them to colonize and crowd out native vegetation. Nuisance/exotic vegetation negatively impacts native wildlife as they take over the natural habitats upon which the faunal species rely.

## **Navigable Waters**

Navigable waterways are present within the project corridor, as the Preferred Alternative will span the Manatee River. While no permanent adverse impacts to navigation are anticipated with the proposed bridge replacement, temporary waterway closures under the bridge, as approved by the United States Coast Guard (USCG), are anticipated during the construction of the replacement bridge. USCG coordination and authorization will be needed for the proposed replacement of the existing bridge, and temporary impacts to navigation may occur during construction. A USCG Bridge Permit will be required to construct the bridge.

## **5.3 Essential Fish Habitat (EFH)**

An Essential Fish Habitat (EFH) Assessment has been prepared and consultation has been completed in accordance with the Magnuson-Stevens Fishery Conservation and Management Act (MSFCMA). It has been determined that this project will have adverse effects to EFH.

Essential Fish Habitat (EFH) is present within mangrove swamps and surface waters, Manatee River, within the project study area. Potential impacts to EFH include 0.31 acres of direct mangrove impacts and 0.71 acres of secondary impacts. The new DeSoto Bridge will span 6.09 acres of surface waters, but actual impacts to EFH within the Manatee River will be significantly less. These impacts will be finalized when bridge piling sizes and locations are determined during the design phase.

As reported in the ETDM Programming Screen Summary Report of October 7, 2023, habitat within the Manatee River has been identified as EFH. **Table 5-7** illustrates a list of species that could potentially utilize the study area.

**Table 5-7- Managed Fisheries / Species with EFH within the Project Study Area**

<b>Fishery Management Plan</b>	<b>Scientific Name</b>	<b>Common Name</b>
Shrimp	<i>Penaeus duorarum</i>	Pink Shrimp
	<i>Penaeus aztecus</i>	Brown Shrimp
	<i>Penaeus setiferus</i>	White Shrimp
Red Drum	<i>Sciaenops ocellatus</i>	Red Drum
Reef Fish	<i>Lutjanus campechanus</i>	Red snapper
	<i>Lutjanus cyanopterus</i>	Cubera Snapper
	<i>Lutjanus griseus</i>	Gray Snapper
	<i>Lutjanus synagris</i>	Lane Snapper
	<i>Ocyurus chrysurus</i>	Yellowtail Snapper
	<i>Epinephelus itajara</i>	Goliath Grouper
	<i>Epinephelus morio</i>	Red Grouper
	<i>Mycteroperca bonaci</i>	Black Grouper
	<i>Mycteroperca microlepis</i>	Gag Grouper
	<i>Mycteroperca venenose</i>	Yellowfin Grouper
	<i>Lachnolaimus maximus</i>	Hogfish
Coastal Migratory Pelagics	<i>Scomberomorus cavalla</i>	King Mackerel
	<i>Scomberomorus maculatus</i>	Spanish mackerel
	<i>Rachycentron canadum</i>	Cobia
Spiny Lobster	<i>Panulirus argus</i>	Caribbean Spiny Lobster

BMPs will also be employed during road construction to prevent sedimentation of estuarine habitats. Project commitments provide for coordination with the NMFS to ensure that compensatory mitigation details will be finalized once the project enters the final permitting and design stage. The FDOT has determined the potential adverse effects on EFH will be minimal as a result of the project.

#### **5.4 Floodplains**

There are no floodplains present in the project area.

#### **5.5 Sole Source Aquifer**

There is no Sole Source Aquifer associated with this project.

#### **5.6 Water Resources**

The project study area occupies one drainage basin (Manatee River below Braden River [WBID 1848A]), which is listed for nutrient-related surface water impairments by the Florida Department of Environmental Protection.

Currently, stormwater runoff from the project corridor area south of the bridge is collected by curb inlets within the existing right-of-way before offsite conveyance for treatment. North of the bridge, stormwater is directed to the outside edges of the roadway before the sheet flow is dispersed across the adjacent vegetated shoulders. Stormwater on the existing bridge structure is not treated prior to discharging into the Manatee River. Waters within the project area are retained by the USACE; therefore, a USACE 404 Permit is anticipated. Furthermore, it was agreed that SWFWMD would not require formal water quality treatment for the project.

The proposed stormwater for this project will enhance water quality by providing treatment where none currently exists or where treatment is currently limited. Additionally, BMPs will be employed during construction activities. A Storm Water Pollution Prevention Plan will also be implemented to control the effects of stormwater runoff during construction. An Environmental Resource Permit (ERP) and a National Pollutant Discharge Elimination System (NPDES) construction permit will also be required. The replacement bridge is proposed to be wider to accommodate paved shoulders and pedestrian features which the existing bridge does not have. Vehicular capacity, however, will not increase as the replacement bridge will have the same amount of travel lanes as the existing bridge and, therefore, would not be expected to affect potential stormwater pollution levels into the Manatee River below and, ultimately, Tampa Bay. The existing bridge uses scuppers which allow stormwater to drain directly through holes in the bridge, untreated, into the Manatee River. Stormwater treatment may be included in the replacement bridge design to eliminate this pollutant source which would be anticipated to have beneficial effects to water quality, and therefore EFH, in the project area. BMPs, including proper turbidity control measures, will be utilized during project construction to further prevent water quality impacts in the Manatee River.

### **5.7 Aquatic Preserves**

There are no aquatic preserves in the project area.

### **5.8 Outstanding Florida Waters**

There are no Outstanding Florida Waters (OFW) in the project area.

### **5.9 Wild and Scenic Rivers**

There are no designated Wild and Scenic Rivers or other protected rivers in the project area.

### **5.10 Coastal Barrier Resources**

There are no Coastal Barrier Resources in the project area.

## 6. Physical Resources

The project will not have significant impacts to physical resources. Below is a summary of the evaluation performed for these resources.

### 6.1 Highway Traffic Noise

The following evaluation was conducted pursuant to 23 CFR 772 Procedures for Abatement of Highway Traffic Noise and Construction Noise, and Section 335.17, F.S., State highway construction; means of noise abatement.

The FHWA Traffic Noise Model (TNM) Version 2.5 was used to predict traffic noise levels for the Existing, Future No-Build, and Future Build Alternatives. Traffic noise impacts occur when the predicted traffic sound levels approach or exceed the FHWA Noise Abatement Criteria (NAC) for a given Activity Category or when the predicted traffic noise levels exceed existing levels by 15 dB(A) or more. FDOT requires that noise-abatement measures be evaluated for receptors determined to be noise-impacted because of the Build (Preferred) Alternative. A Noise Study Report (NSR) was prepared and provides additional detail regarding the impact analysis and abatement consideration for all identified noise-sensitive sites.

Within the project study area, a total of 135 noise-sensitive sites were analyzed for impacts. These noise-sensitive sites include a mixture of single and multi-family residences, six recreation uses, one hospital, one office outdoor use area, and one restaurant outdoor seating area.

For the Preferred Alternative (design year 2050), 32 residential receptors are predicted to experience traffic noise levels that will approach, meet, or exceed the NAC for Activity Category B. One recreation use (Palmetto Estuary Preserve Trail) is predicted to experience future traffic noise levels that approach, meet, or exceed the NAC for Activity Category C. A noise barrier was not evaluated for the Palmetto Estuary Preserve trail. The trail is considered an "isolated use" and, according to FDOT's methodology for evaluating noise abatement at non-residential land uses, would not have enough daily person-hours of use to warrant a detailed noise barrier analysis.

A noise barrier was evaluated to abate the project traffic noise impacts at the residential receptors located in the Aria at Bradenton Apartments. Further evaluation of the potentially feasible and cost-reasonable noise barrier will be performed during the final design phase of the project. The potentially feasible and cost-reasonable noise barrier location is shown in the Noise Map.

### 6.2 Air Quality

This project is not expected to create adverse impacts on air quality because the project area is in attainment for all National Ambient Air Quality Standards (NAAQS) and because the project is expected to not change the Level of Service (LOS) and not change delay and congestion on all facilities within the study area.

Construction activities may cause short-term air quality impacts in the form of dust from earthwork and unpaved roads. These impacts will be minimized by adherence to applicable state regulations and to applicable FDOT Standard Specifications for Road and Bridge Construction.

Construction activities may cause short-term air quality impacts in the form of dust from earthwork and unpaved roads. These impacts will be minimized by adherence to applicable state regulations and to applicable FDOT Standard Specifications for Road and Bridge Construction.

### 6.3 Contamination

A Contamination Screening Evaluation Report (CSER) was developed for this PD&E Study in accordance with the FDOT PD&E Manual Part 2, Chapter 20, Contamination (July 1, 2023). This report evaluated potential and existing contamination sources within the project area buffer.

Available records reported many sources associated with hazardous waste management, petroleum storage systems/spills, cleaning or dry-cleaning activities, and environmental contamination within a 500 ft buffer of the project study area. The northern portion of the project corridor is located within one brownfield area - Palmetto Economic Enhancement District. Other potential sources of contamination reported within the 500-foot project buffer include five hazardous waste facilities, three petroleum contamination monitoring sites, four storage tank contamination monitoring sites, three State Underground Petroleum Environmental Response (SUPER) Act risk sources, one USEPA Assessment Cleanup and Redevelopment Exchange System (ACRES) site, three USEPA Resource Conservation and Recovery Act (RCRA) regulated facilities, and one subsidence incident report; it should be noted that some of the identified sources overlap categories. In addition, as reported through an asbestos and protective coating survey conducted for DeSoto Bridge in July 2011, the felt paper located between the end bents and the bridge decking, as well residual felt paper strips observed on the underside of the decking, contain chrysotile asbestos. The known asbestos-containing material will be properly handled and disposed of by a licensed contractor during construction.

Evaluation of site characteristics for these sources and associated environmental information identified nine sources. A contamination risk rating was utilized to evaluate the likelihood that a contaminated site may impact the project area. The risk rating distribution for these identified sites/facilities is presented in Table 6-2. Additional details can be found in the CSER to investigate all potential sites within or adjacent to the project corridor. Based on the finding of this Level I Contamination Screening Evaluation, Level II Impact to Construction Assessments (ICAs) are not anticipated to be required.

Site Name	Site Address	Risk Potential
Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245	520 1st Street West	Low
Gulfcoast Family Practice	202 Manatee Avenue East	Low
The Bradenton Herald	102 Manatee Avenue West	Low
Manatee Memorial Hospital	206 2nd Street East	Low
Gould & Lamb	101 Riverfront Boulevard	Low
Palmetto Economic Enhancement District	Study Area	Low
102 1st Street East Property	102 1st Street East	Low

#### Low Risk Sites (7)

Site Name	Site Address	Risk Potential
Historical Gas Station	101 Manatee Avenue West	Medium
7-Eleven Food Store No. 33110	208 US Highway 41	Medium

#### Medium Risk Sites (2)

## 6.4 Utilities and Railroads

Existing utilities within the project area include overhead power lines (located north of the bridge), underground fiber optic cable, water distribution, sanitary and storm sewer, and natural gas distribution, which are shown in the appendix. In addition, a subaqueous waterline (owned and operated by Manatee County, which is a critical part of the county's potable water distribution system) runs parallel to the bridge and will be replaced. Construction is anticipated to begin in 2025. It is anticipated that utility relocations will be required based on location and depth.

DRAFT

<b>Utility Agency/Owners</b>	<b>Facilities Within Corridor</b>	<b>Description of Existing Utilities</b>
City of Bradenton	Yes	<ol style="list-style-type: none"> <li>1. City of Bradenton has a 20" ductile iron potable water line running east to west along the north side of Riverfront Blvd crossing US 41 and exiting the project limits in both directions.</li> <li>2. City of Bradenton has a 2" PVC force main just west of US 41 that crosses from the north side of Riverfront Blvd to the south side and continues west exiting the project limits.</li> </ol>
Crown Castle	Yes	<ol style="list-style-type: none"> <li>1. Crown Castle has 4 x 1.5" conduit with 72 count FOC running east and west along the south side of Manatee Ave E crossing US 41 and exiting the project limits in both directions.</li> <li>2. Crown Castle has 4 x 1.5" conduit with 216 count FOC at the southeast corner of the Manatee Ave E and US 41 intersection that runs north crossing the bridge before going aerial approximately 260' north of the bridge.</li> <li>3. Crown Castle has 4 x 1.5" conduit with 96 count FOC at the southeast corner of the 3<sup>rd</sup> Ave W and US 41 intersection that crosses to a handhole on the east side of US 41 and continues east exiting the project limits.</li> <li>4. Crown Castle has an aerial 288 count FOC approximately 260' north of the bridge running north along the west side of US 41 exiting the project to the north.</li> <li>5. Crown Castle has 4 x 1.5" conduit with 288 county FOC at the southeast corner of the Haben Blvd and US 41 intersection that crosses to a handhole on the east side of US 41.</li> </ol>
Florida Power & Light – Distribution	Yes	<ol style="list-style-type: none"> <li>1. FPL has an overhead electric line at the northwest corner of the Haben Blvd and US 41 intersection that runs south to Desoto Bridge where it goes subaqueous crossing to the south side but exiting the project limits.</li> <li>2. FPL has a buried electric line running west along the south side of 3<sup>rd</sup> Ave W that crosses US 41 to feed the hospital on the east side of US 41.</li> </ol>
Frontier	Yes	<ol style="list-style-type: none"> <li>1. Frontier has 5 buried 4" PVC with fiber north of Haben Blvd running south along the east side of US 41 to a 3'x5' hanhole just north of the Desoto Bridge where the lines go subaqueous to cross to the south side of the bridge and cross to a hanhole on the southside of Riverfront Blvd.</li> <li>2. Frontier has 2 buried 4" PVC with fiber running east and west along the south side of Riverfront Blvd that cross US 41 and exit the project limits in both directions.</li> </ol>
Manatee County Transportation	Yes	<ol style="list-style-type: none"> <li>1. Manatee County Transportation has facilities running south along the west side of US 41 until reaching the northwest corner of the Haben Blvd and US 41 intersection where they cross to the northeast intersection.</li> </ol>

Manatee County Transportation Continued		<ol style="list-style-type: none"> <li>2. Manatee County Transportation has facilities at the northwest corner of the Haben Blvd and US 41 intersection that run to the southwest corner and cross to the southeast corner.</li> <li>3. Manatee County Transportation has facilities starting at the north end of the project running south along the west side of US 41 to the northwest corner of the Haben Blvd and US 41 intersection.</li> <li>4. Manatee County Transportation has facilities at the northwest corner of the Haben Blvd and US 41 intersection that crosses to the northeast corner then to the southeast corner and crosses to the southwest corner.</li> <li>5. Manatee County Transportation has facilities at the northwest corner of the Haben Blvd and US 41 intersection that runs south ending just north of 1<sup>st</sup> St E.</li> </ol>
Manatee County Utilities	Yes	<ol style="list-style-type: none"> <li>1. Manatee County Utilities has a 16" DIP water main starting at the north end of the project running south along the east side of US 41 eventually becoming subaqueous to cross to 1<sup>st</sup> St E.</li> <li>2. Manatee County Utilities has a 16" DIP water main running south east of 1<sup>st</sup> St E before ending at the northeast corner of the 3<sup>rd</sup> Ave W and 1<sup>st</sup> St E intersection.</li> </ol>
MCI	Yes	<ol style="list-style-type: none"> <li>1. MCI has 2 x 2" HDPE conduit with FOC just south of 3<sup>rd</sup> Ave W that runs north along the west side of US 41 where it goes subaqueous to cross along the west side of the bridge eventually exiting the project limits to the north.</li> <li>2. MCI has 2 x 2" HDPE conduit with FOC just south of 3<sup>rd</sup> Ave W that runs north along the east side of US 41 where it goes subaqueous to cross along the east side of the bridge eventually exiting the project limits to the north.</li> </ol>
Spectrum		<ol style="list-style-type: none"> <li>1. Spectrum has underground facilities at the northeast corner of the Manatee Ave and US 41 intersection that cross to the northwest corner and continue north going subaqueous at the bridge and crossing to the east side of US 41 just north of the end of the bridge.</li> <li>2. Spectrum has underground facilities just north of the bridge on the east side of US 41 running north until exiting the project.</li> </ol>
Uniti Fiber	Yes	<ol style="list-style-type: none"> <li>1. Uniti has underground facilities north of Haben Blvd running south along the west side of US 41 attaching to the bridge to continue south along the west side.</li> </ol>
Zayo Group	Yes	<ol style="list-style-type: none"> <li>1. Zayo has a buried fiber line at the southwest corner of the Manatee Ave and US 41 intersection that runs north before going subaqueous and crossing to the north end of the bridge.</li> <li>2. Zayo has a buried fiber line just north of the bridge that runs north along the west side of US 41 to the southwest corner of the Haben Blvd and US 41 intersection.</li> <li>3. Zayo has a buried fiber line at the southwest corner of the Haben Blvd and US 41 intersection that crosses to the southeast corner and then runs north exiting the project limits</li> </ol>

There are no railroads within the immediate vicinity of the project.

## 6.5 Construction

Construction activities for the proposed Preferred Alternative may temporarily impact air, noise, vibration, water quality, traffic flow, and visual quality for residents and travelers in the project's immediate vicinity. These impacts would be controlled by the FDOT Standard Specifications for Road and Bridge Construction.

Maintenance of traffic and sequence of construction would be planned and scheduled to minimize traffic delays throughout the project corridor. Construction along SR 55 in areas of the existing roadway will be phased to allow a minimum of four lanes (two lanes in each direction) and utilize nighttime lane closures as necessary. This configuration will match the existing number of lanes to minimize disruptions.

During construction, the contractor will utilize BMPs to minimize sedimentation and erosion impacts to areas outside the construction limits. This project may require an NPDES permit, which will be developed during design.

The contractor is responsible for their methods of controlling pollution on haul roads, borrow pits, other material pits, and areas used for disposal of materials from the project. Temporary erosion (water quality) control features, as specified in Section 104 of FDOT Standard Specifications for Road and Bridge Construction, will consist of measures such as temporary grassing, sodding, mulching, sandbagging, slope drains, sediment basins, sediment checks, artificial coverings, and berms.

It is FDOT's policy to follow the requirements of local ordinances to the extent practicable. The residences and the medical facility within the project limits are construction noise and vibration-sensitive sites. Construction of the proposed roadway improvements is not expected to have any significant noise or vibration impacts on these properties. If sensitive land uses develop adjacent to the roadway prior to construction, increased potential for noise or vibration impacts could result. It is anticipated that applying the FDOT Standard Specifications for Road and Bridge Construction will minimize or eliminate potential noise and vibration impacts. The FDOT Standard Specifications contain the following requirements for construction noise and vibration control:

The contractor shall operate only factory-recommended exhaust muffles on internal combustion engines.

Backup alarm noise from heavy equipment and trucks shall be minimized by requiring the contractor to operate forward passes or in a figure-eight pattern when dumping, spreading, or compacting material.

Adequate equipment maintenance procedures shall be used to eliminate unnecessary noise caused by loose body parts on all construction equipment.

Excessive tailgate banging by haul trucks shall be prohibited.

All stationary equipment shall be screened from noise-sensitive receptor sites if it is to operate beyond normal working hours. The equipment shall also be screened during normal working hours to reduce noise impacts if feasible.

When feasible, the contractor shall establish haul routes to direct vehicles away from developed areas and ensure minimal noise from hauling operations.

Additional coordination with Manatee Memorial Hospital will be conducted to ensure access to the hospital is consistently maintained throughout construction. Coordination with local emergency service providers will allow accommodations and

proper planning for emergency service vehicle routes throughout construction.

Should noise or vibration issues arise unexpectedly during the construction process, the Project Engineer, in coordination with the District Noise Specialist and the Contractor, will investigate additional methods to control these impacts.

Temporary impacts to travelers along SR 55 are anticipated during bridge construction. A Temporary Traffic Control Plan (TTCP) will be developed during final design for the implementation of the Preferred Alternative.

## 7. Engineering Analysis Support

The engineering analysis supporting this environmental document is contained within the Preliminary Engineering Report (PER).

DRAFT

## 8. Permits

The following environmental permits are anticipated for this project:

### Federal Permit(s)

USCG Bridge Permit

### Status

To be acquired

### State Permit(s)

FDEP or WMD Environmental Resource Permit (ERP)

FDEP National Pollutant Discharge Elimination System Permit

State 404 Permit

### Status

To be acquired

To be acquired

To be acquired

DRAFT

## 9. Public Involvement

The following is a summary of public involvement activities conducted for this project:

### Summary of Activities Other than the Public Hearing

The following is a summary of public involvement activities conducted for this project:

#### Public Involvement Plan

A Public Involvement Plan (PIP) (May 2023) was prepared at the start of the study and is included in the project file. This program was implemented in accordance with the *FDOT's PD&E Manual*; Section 339.155, F.S.; Executive Orders 11990, Protection of Wetlands and 11988, Floodplain Management; Council on Environmental Quality (CEQ) Regulations for implementing the procedural provisions of the National Environmental Policy Act; and 23 CFR 771. The PIP outlines the strategies used to address public involvement and outreach over the course of the study. Additionally, a Comments and Coordination Report will be prepared to fully document the public, agency, and stakeholder involvement associated with this project. Coordination efforts completed to date are summarized below.

#### Agency and Stakeholder Coordination

At the beginning of the study, numerous agencies and stakeholders were identified that would have an interest in the DeSoto Bridge Replacement PD&E study. Stakeholders include representatives from various local governments, chambers of commerce, civic organizations, environmental groups, and local businesses. Throughout the project meetings and presentations were conducted at various locations. Between 2020 and March 2024 there were 39 meetings with local governments, 21 stakeholder/neighborhood/interested parties, four public meetings, and participation in twelve (12) community outreach events.

#### Public Kick-off Meeting

Project kickoff emails to elected and appointed officials were sent on April 25, 2023. A public newsletter was mailed via U.S. Mail on April 26, 2023. The newsletter informed the public of the start of the project and kickoff meeting information. It also included a description of the study process and schedule, encouraged the need for public input, and provided FDOT point-of-contact information regarding citizen questions, comments, and concerns. The in-person meeting format included an open house format with a continuous loop presentation and exhibits. Some 52 signed in. A virtual Kick-Off Meeting was held on May 25, 2023, from 6 to 7 p.m. The virtual meeting format included a presentation and questions/comments were received through the chat function. 12 people logged in. There were few comments received with no clear preference.

#### Kick Off Public Meeting

Two public kickoff meetings for the DeSoto Bridge PD&E Study in Manatee County-one in-person and one virtual. The in-person meeting was held on Tuesday, May 23, 2023, at the Bradenton Area Convention Center, 1 Haben Boulevard, Palmetto, FL 34221. The in-person event was held from 5 to 7 p.m. and was held as an open house. A virtual public meeting was held on Thursday, May 25, 2023, online through GoTo Webinar. The online event was held from 6 to 7 p.m. Project kickoff emails to elected and appointed officials were sent on April 25, 2023. A public newsletter was mailed via U.S. Mail on April 26, 2023. It also included a description of the study process and schedule, encouraged the need for public input, and provided FDOT point-of-contact information regarding citizen questions, comments, and concerns. The meeting included a video presentation and question-and-answer format. The purpose of the kickoff meetings was to introduce the project to the community, collect feedback, and address queries from interested individuals. The meetings sought to inform the public about the potential in-kind replacement of the Hernando DeSoto Bridge and the project's aim to bring the bridge up to current FDOT design standards.

During the kick-off meeting events, stakeholders were able to view the project video, display boards, and materials. Attendees were able to ask questions and share concerns with project staff. Comment cards were provided for written comments. Fifty-two (52) people signed into the in-person meeting. Twelve (12) people registered for the virtual meeting.

Attendees were given an opportunity to provide public comments through the following methods: 1) written comments at the meeting, 2) mail comments to the FDOT's project manager, 3) e-mail comments to the FDOT's project manager, and via the project website: <https://www.swflroads.com/project/442630-1>. One (1) comment card was received at the in-person meeting. One (1) comment was provided during the virtual meeting.

Meeting comments throughout the comment period showed no clear preference.

### **Alternatives Public Workshop**

An alternatives public workshop was held on Tuesday, October 17, 2023, at the Manatee Performing Arts Center, 502 3rd Avenue W, Bradenton, FL 34205. The in-person event was held from 5 p.m. to 7 p.m. and was held as an open house. A virtual public workshop was held on Thursday, October 19, 2023, online through GoTo Webinar. The online event was held from 6 p.m. to 7 p.m. and was held in a presentation and question-and-answer format. This facility was selected due to its local proximity to the study area, availability of Americans with Disabilities Act (ADA) accessible facilities, and the ability to accommodate an expected number of participants.

Alternatives public workshop emails to elected and appointed officials were sent on September 19, 2023. A public newsletter was mailed via U.S. Mail on September 20, 2023. It also included a description of the study process and schedule, encouraged the need for public input, and provided FDOT point-of-contact information regarding citizen questions, comments, and concerns. The purpose of both workshop events was to provide an opportunity for the public to provide comments regarding the alternatives being considered for the project. Alternatives presented included a "no build" alternative, a west bridge alternative, and an east bridge alternative. The alternatives were provided to determine which side of the existing bridge the initial section of the new bridge would be built or "no build".

During the alternative meetings, stakeholders were able to view the project video, display boards, and materials. Attendees were able to ask questions and share concerns with project staff. A separate table for right-of-way, and "other projects" information was available to the public. The "other projects" included the Bradenton-Palmetto Connector and Connecting Communities projects. Comment cards were provided to attendees for written comments. Thirty-seven (37) citizens and three (3) elected officials signed in at the in-person meeting. Twelve (12) people registered for the virtual meeting.

Attendees were given an opportunity to provide public comments through the following methods: 1) written comments at the meeting, 2) mail comments to the FDOT's project manager, 3) e-mail comments to the FDOT's project manager, and via the project website: <https://www.swflroads.com/project/442630-1>. Eleven (11) comment cards were received at the public workshop. Two (2) comments were provided digitally following the public workshop. Zero comments were received by mail following the public workshop.

During the meeting and throughout the comment period, there was no clear preference and no heavy opposition. Comments received were positive about the shared-use path.

### **Summary of Public Hearing**

A hybrid public hearing is being held on April 30, 2024, from 5 to 7:00 p.m. at the Manatee County Fairgrounds, 1402 14th Avenue W, Palmetto, FL 34221. This facility was selected due to its local proximity to the study area, availability of Americans with Disabilities Act (ADA) accessible-facilities, and the ability to accommodate the expected number of participants. **This section will be updated to reflect the public input received following the public hearing.**

**Date of Public Hearing:** 04/30/2024

**Summary of Public Hearing**

DRAFT

## 10. Commitments Summary

1. The most recent version of the USFWS Standard Protection Measures for the Eastern Indigo Snake will be adhered to during construction of the proposed project;
2. The USFWS and FWC Standard Manatee Conditions for In-Water Work will be utilized during construction.
3. The NMFS Protected Species Construction Conditions will be adhered to during construction of the proposed project;
4. Updated surveys for Submerged Aquatic Vegetation (SAV) will be conducted during the design phase of the project;
5. Consultation will be re-initiated with NMFS regarding Section 7 and EFH during the design phase of the project;
6. FDOT will provide mitigation for impacts to wood stork Suitable Foraging Habitat within the Service Area of a Service-approved wetland mitigation bank or wood stork conservation bank; and
7. If the listing status of the tricolored bat is elevated by USFWS to Threatened or Endangered and the Preferred Alternative is located within the consultation area, FDOT commits to re-initiating consultation with the USFWS to determine the appropriate survey methodology and to address USFWS regulations regarding the protection of the tricolored bat.

## 11. Technical Materials

The following technical materials have been prepared to support this Environmental Document and are included in the Project File.

Cultural Resources Assessment Survey (CRAS)  
Natural Resources Evaluation (NRE)  
Water Quality Impact Evaluation (WQIE)  
Natural Resources Evaluation (NRE)  
Noise Study Report (NSR)  
Contamination Screening Evaluation Report (CSER)  
Preliminary Engineering Report (PER)  
Typical Section Package (TSP)  
Public Involvement Plan (PIP)

## 1.00 INTRODUCTION

The Sarasota/Manatee Metropolitan Planning Organization (MPO) is the regional transportation planning entity within Sarasota and Manatee Counties, including the Sarasota-Bradenton Urbanized Area (UZA). MPOs are established by state and federal laws and through interlocal agreements to provide a process for local governments within a Transportation Management Area (TMA) to coordinate with the Florida Department of Transportation (FDOT), the Federal Highway Administration (FHWA), and the Federal Transit Administration (FTA). A TMA is an urbanized area with a population over 200,000 as determined by the latest decennial census.

The MPO develops the Transportation Improvement Program (TIP) annually in accordance with state and federal requirements, and the current Florida Department of Transportation (FDOT) MPO Program Management Handbook. The TIP is submitted to federal and state review agencies according to the dates, processes and agencies described in the handbook. The MPO planning process is continuing, comprehensive and cooperative.

THE PUBLIC IS INVITED TO COMMENT ON THIS  
**TRANSPORTATION IMPROVEMENT PROGRAM (TIP)**  
BY  
**May 22, 2023**

Public participation is an important part of the transportation planning process. Information gathered from the public provides clear direction to transportation planners and leads to a more collaborative and comprehensive plan that meets the needs of many stakeholders. This document is also available online at [www.mympo.org](http://www.mympo.org).

**1.01 Resolution**

**RESOLUTION NO. 2023-02**

**RESOLUTION ENDORSING THE FY 2023/2024 - 2027/2028  
TRANSPORTATION IMPROVEMENT PROGRAM FOR THE  
SARASOTA-BRADENTON URBANIZED AREA**

**WHEREAS**, the Sarasota/Manatee Metropolitan Planning Organization is responsible for conducting the continuing, cooperative, and comprehensive, transportation planning process for the Sarasota-Bradenton Urbanized Area under Title 23 USC 134, Title 49 USC 5303, and s. 339.175, F.S.; and

**WHEREAS**, the Fixing America’s Surface Transportation Act (FAST Act) of 2015 requires the Metropolitan Planning Organization to develop and endorse the Transportation Improvement Program (TIP), which is a staged multi-year program of transportation improvement projects, consistent with the requirements established in Title 23 USC 134 and 339.175, F.S.; and

**WHEREAS**, the Transportation Improvement Program shall include projects proposed for funding under Title 23 USC and the Federal Transit Act consistent with the MPO Long Range Transportation Plan.

**NOW, THEREFORE, BE IT RESOLVED BY THE SARASOTA/MANATEE METROPOLITAN PLANNING ORGANIZATION THAT:**

1. The FY 2023/2024 - 2027/2028 Transportation Improvement Program as submitted is endorsed and adopted as the official Transportation Improvement Program for the Sarasota-Bradenton Urbanized Area.
2. The Chair is hereby authorized to execute this resolution and to submit the FY 2023/2024 - 2027/2028 Transportation Improvement Program to the various state and federal agencies as required.

The Vice Chair of the MPO thereupon declared the Resolution duly passed and adopted this 22<sup>nd</sup> day of May 2023.

Signed:

## 2.00 TRANSPORTATION IMPROVEMENT PROGRAM (TIP)

### 2.01 Purpose

The purpose of the Transportation Improvement Program (TIP) is to provide a prioritized listing of transportation projects covering a period of five years that is consistent with the Sarasota/Manatee Metropolitan Planning Organization (MPO) Long Range Transportation Plan (LRTP). The TIP contains all transportation projects within the Sarasota/Manatee metropolitan area to be funded by Title 23 and Title 49 funds from the U.S. Department of Transportation (USDOT), the Federal Highway Administration (FHWA), and the Federal Transit Administration (FTA) and all regionally significant projects regardless of funding source. This TIP is for the period beginning July 1, 2023 through June 30, 2028.

### 2.02 Financial Plan

**Financial Constraint:** Under federal legislation, metropolitan areas are required to develop a financially constrained TIP as a means to direct resources toward high priority projects. Pursuant to these federal regulations, the level of authorized funding available to the state and the metropolitan area has been used as the basis for financial restraint and scheduling for the projects using federal funds. Projects are financially feasible for the appropriate funding category and represent, to the maximum extent possible, the MPO's established priorities.

**TIP Implementation:** The federally funded projects identified in the TIP can be implemented using current and proposed revenue sources based on the FDOT Tentative Five-Year Work Program and locally dedicated transportation revenue. The TIP includes projects, or phases of projects, that are expected to be fully funded in the 20-year horizon of the recently adopted 2045 LRTP. Additional projects that would be included in the approved TIP if reasonable additional resources beyond those identified in the financial plan were available may be identified pursuant to s.339.175(8)(c)(3), F.S.

**TIP Development:** The TIP is developed by the MPO in cooperation with FDOT and the region's two public transit operators, Manatee County Area Transit (MCAT) and Sarasota County Area Transit (SCAT), who provide the MPO with estimates of available federal and state funds in order for the MPO to develop the financial plan. [23 C.F.R. 450.326(a) and s.339.175(8), F.S.]. It is developed through a continuing, comprehensive, and cooperative (3C) effort involving all counties, cities, and towns in the Sarasota/Manatee urbanized area as well as the Sarasota-Bradenton Airport Authority and the Manatee Port Authority. The TIP is broadly distributed for review and comment by the public before it is recommended for approval by the MPO Citizens Advisory Committee and Technical Advisory Committee, and before it is approved by the MPO Governing Board.

### 2.03 Project Selection Process

In areas designated as TMAs, the MPO shall select all 23 U.S.C. and 49 U.S.C. Chapter 53 funded projects in consultation with the State and public transportation operator(s) from the approved TIP and in accordance with the priorities in the approved TIP. The State shall select projects on the NHS in cooperation with the MPO, from the approved TIP. [23 C.F.R. 450.332(c)]

In 2012, Congress passed Moving Ahead for Progress in the 21<sup>st</sup> Century Act (MAP-21), which changed the way communities must document the allocation and use of federal funds. This direction was further refined in the 2015 Fixing America's Surface Transportation Act (FAST Act). The FAST Act provided direction to the MPOs mandating that the TIP:

- Contains projects consistent with the current metropolitan transportation plan; and
- Reflects the investment priorities established in the current metropolitan transportation plan; and
- Once implemented, is designed to make progress toward achieving the performance targets established.

States and metropolitan planning organizations are now mandated to verify how they *“invest resources in projects to achieve individual targets that collectively will make progress toward national goals.”* The Sarasota/Manatee Metropolitan Planning Organization (MPO) began addressing this change during development of the Sarasota/Manatee 2040 Long Range Transportation Plan (LRTP) which was adopted in December 2015.

In January 2016, the MPO Technical Advisory Committee (TAC) took on the task of updating the MPO criteria for project selection in accordance with Federal Guidelines on Performance Measures and to be consistent with the newly adopted 2040 LRTP. In April 2017, all MPO advisory committees (Technical, Citizens, and Bicycle/Pedestrian/Trails) and the MPO Governing Board unanimously supported aligning MPO project selection with mandated performance measures.

In April 2018, the MPO reevaluated the correlation between National, State, and MPO goals and objectives. To score projects more effectively, the MPO assessed project prioritization criteria and updated various criteria to better align with specific mandates as new information and data became available. In January 2019, the MPO began updating the Long-Range Transportation Plan for 2045 and a reorganization of focus areas was necessary to better align the goals of the MPO with the requirements of federal and state legislation.

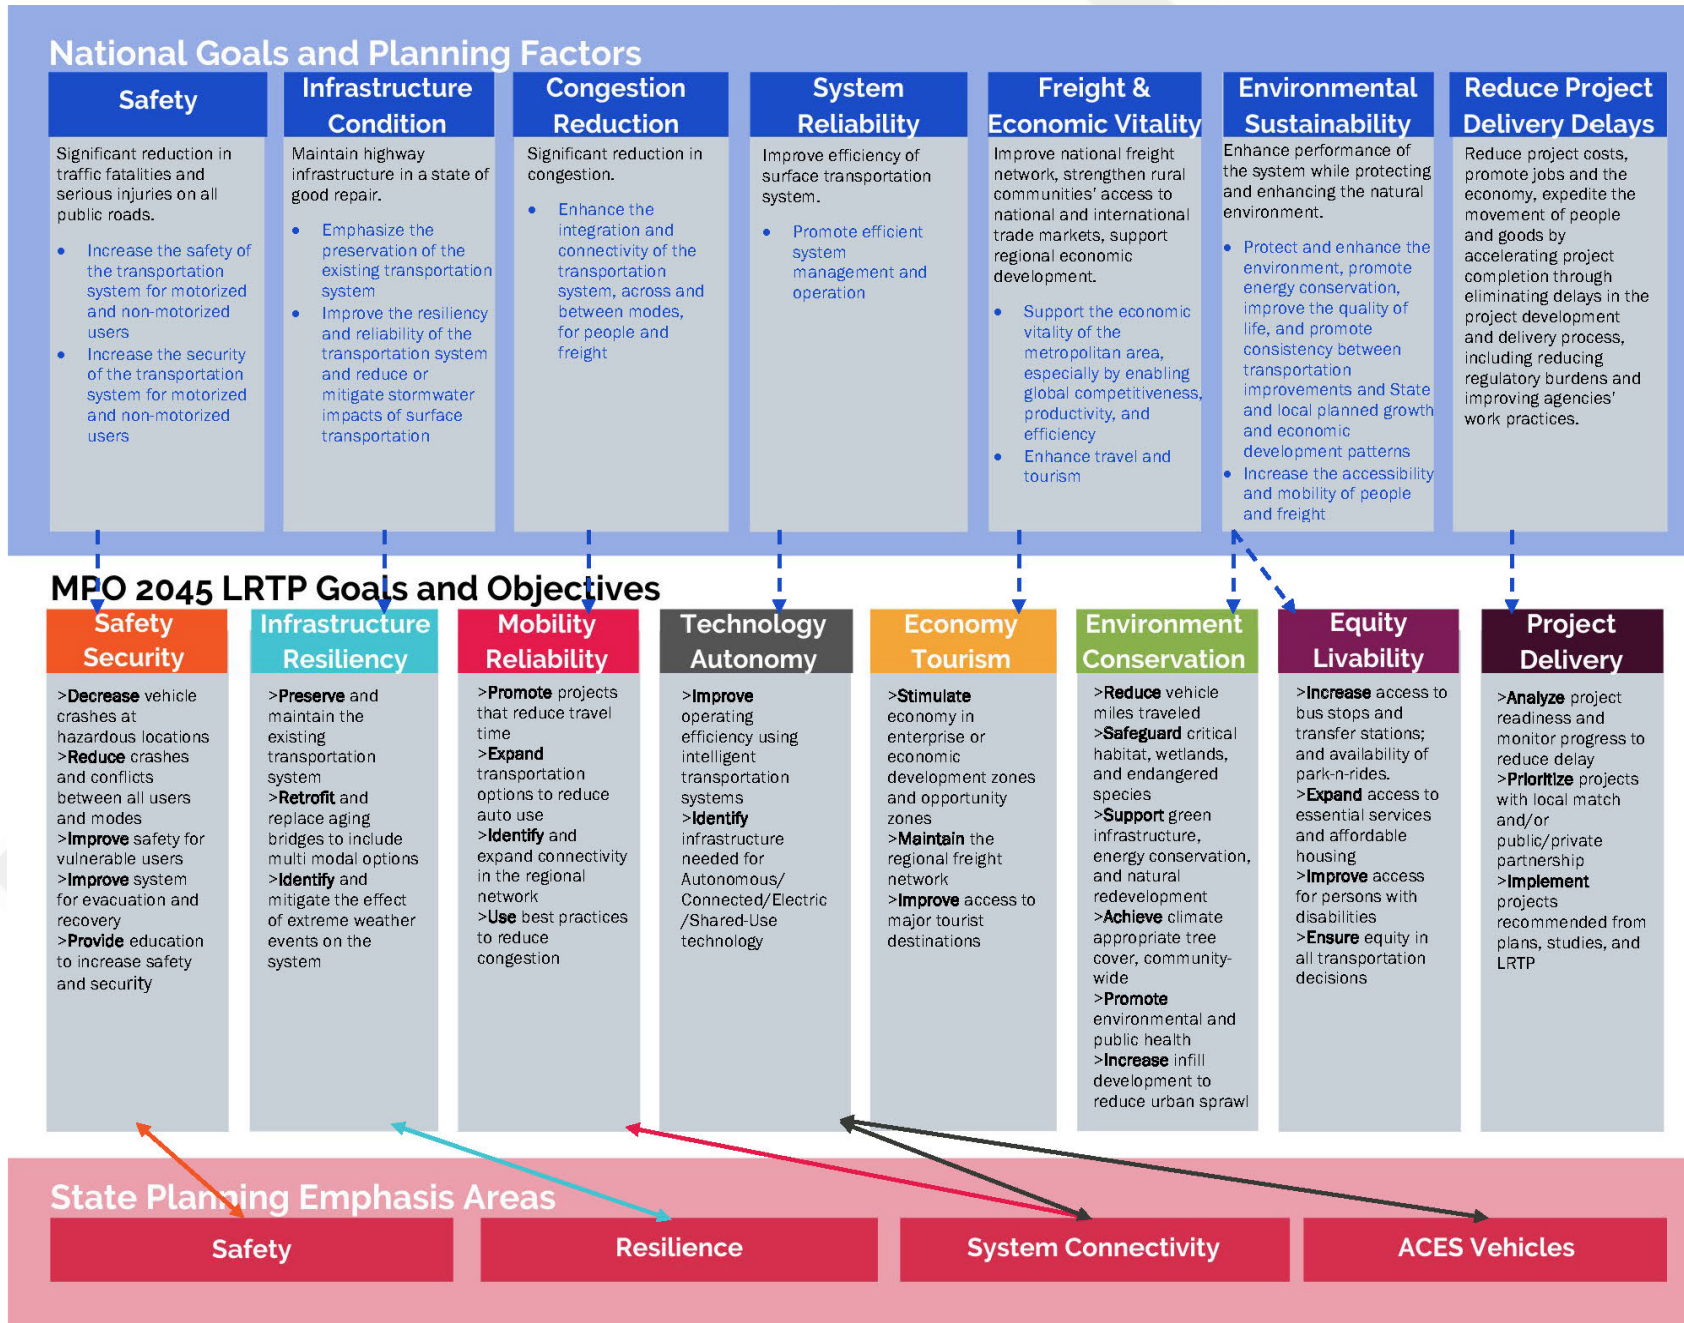

The MPO adopted the 2045 Long Range Transportation Plan in October 2020 and completed the transition process of aligning the MPO goals and objectives with federal and state legislation and performance measures. The updated 2045 Cost Feasible Plan is directly tied to the 2045 Long Range Transportation Plan’s focus areas and will generate projects that will continue to support and promote the requirements set forth by the reviewing agencies.

In November 2021, the Bipartisan Infrastructure Law (BIL) was passed. The BIL continues planning programs that provide funding and set procedural requirements for multimodal transportation planning in metropolitan areas and states that result in long-range plans and short-range programs of transportation investment priorities. While largely continuing the requirements applied by the FAST Act, changes effected by the 2021 BIL include, but are not limited to:

- Adding consideration of state and local housing patterns in the metropolitan planning process;
- Considering the equitable and proportional representation of the population of the metropolitan planning area when designating officials for the first time; and,
- Using at least 2.5% of PL funds on planning activities that increase safe and accessible options for multiple travel modes for people of all ages and abilities.

As of March 2023, the MPO is updating its project prioritization process to align with updated national metropolitan planning focus areas, including equity and resiliency. This process will be concluded in December 2023.

## FHWA National Performance Goals and Sarasota/Manatee MPO 2045 LRTP Goals

## 2.04 Performance Measures

**MAP-21 Performance Management Requirements:** Performance Management is a strategic approach to connect investment and policy decisions to help achieve performance goals. Performance measures are quantitative criteria used to evaluate progress. Performance measure targets are the benchmarks against which collected data is gauged. The Moving Ahead for Progress in the 21<sup>st</sup> Century Act (MAP-21) requires State DOTs and MPOs to conduct performance-based planning by tracking performance measures and setting data-driven targets to improve those measures. Performance-based planning ensures the most efficient investment of federal transportation funds by increasing accountability, transparency, and providing for better investment decisions that focus on key outcomes related to seven national goals:

- Improving Safety; and
- Maintaining Infrastructure Condition; and
- Reducing Traffic Congestion; and
- Improving System Reliability; and
- Improving the Efficiency of the System and Freight Movement; and
- Protecting the Environment; and
- Reducing Delays in Project Delivery.

The Fixing America's Surface Transportation (FAST) Act supplemented MAP-21 by establishing timelines for state DOTs and MPOs to comply with the requirements of MAP-21. The Florida Department of Transportation (FDOT) and MPOs must coordinate when selecting PM1, PM2, and PM3 performance targets, and public transportation providers must coordinate with states and MPOs in the selection of state and MPO transit asset management and transit safety performance targets.

**FHWA Safety Measures (PM1):** Safety is the first national goal identified in the FAST Act. In March of 2016, the Highway Safety Improvement Program (HSIP) and Safety Performance Management Measures Rule (Safety PM Rule) was finalized and published in the *Federal Register*. The rule requires MPOs to establish annual targets for the following safety-related performance measures and report progress to the State DOT:

- Fatalities; and
- Serious Injuries; and
- Non-motorized Fatalities and Serious Injuries; and
- Rate of Fatalities per 100M Vehicle Miles Traveled (VMT); and
- Rate of Serious Injuries per 100M VMT.

FDOT and Florida's traffic safety partners are committed to eliminating fatalities and serious injuries. The organizing principle of the Safe System approach, promoted by the Federal Highway Administration, is that *the death or serious injury of any person is unacceptable*. In 2012, FDOT established zero as the only acceptable target for all five of the federal safety performance measures. FDOT has since reaffirmed this commitment annually by establishing safety targets of zero. The Sarasota/Manatee MPO supports FDOT's 2023 safety targets of zero.

The Florida Transportation Plan (FTP), the state’s long-range transportation plan, identifies eliminating transportation-related fatalities and serious injuries as the state’s highest transportation priority. Florida’s 2021-2025 Strategic Highway Safety Plan (SHSP), published in March 2021, specifically embraces Target Zero: **“Florida’s safety vision is simple: to eliminate all transportation-related fatalities and serious injuries for all modes of travel.”** The SHSP was updated in coordination with Florida’s 27 MPOs and the MPOAC. The SHSP development process included review of safety-related goals, objectives, and strategies in MPO plans. The SHSP guides FDOT, MPOs, and other safety partners in addressing safety and defines a framework for implementation activities to be carried out throughout the state.

The Florida Transportation Plan (FTP) and Florida’s Strategic Highway Safety Plan (SHSP) both highlight the statewide commitment to a vision of zero transportation-related deaths and serious injuries. The Florida Highway Safety Improvement Program (HSIP) Annual Report tracks progress toward that vision by documenting statewide performance measures.

MPOs are required to establish safety targets annually within 180 days of when FDOT established targets. MPOs establish targets by either agreeing to program projects that will support the statewide targets or establish their own quantitative targets for the MPO planning area. The MPO analyzes safety data for the metropolitan planning area annually. From 2018 to 2022, the MPO Board referenced the available data to identify and adopt realistic, attainable safety performance targets based on historical data and projected trends. In 2023, the MPO Board adopted targets of zero for all five performance measures, consistent with FDOTs adopted safety targets and Target Zero.

#	Safety Targets (5-YR AVG)	Date Adopted
1	2014-2018	January 22, 2018
2	2015-2019	September 24, 2019
3	2016-2020	January 27, 2020
4	2017-2021	February 22, 2021
5	2018-2022	January 24, 2022
6	2019-2023	January 23, 2023

The Sarasota/Manatee MPO Board adopted 2018-2022 Safety Targets on January 24, 2022. The MPO area exceeded the adopted targets for the following performance measures: number of fatalities, fatality rate, serious injury rate, and nonmotorized fatalities and serious injuries. The MPO did not exceed the target for the performance measure: number of serious injuries.

### 2018 – 2022 Safety Performance Targets

Performance Measure	2022 ADOPTED TARGET	2022 ESTIMATED*
Number of fatalities	101	124
Rate of fatalities per 100 million vehicle miles traveled (VMT)	1.22	1.48
Number of serious injuries	1,115	1,108
Rate of serious injuries per 100 million vehicle miles traveled (VMT)	11.55	13.21
Number of non-motorized fatalities and serious injuries	158	172

Targets based on 5-year rolling averages.  
 \*Estimate based on available data through December 20,2022 and interpolated for 12 months.  
 Source: Signal4 Analytics (12/21/2022)

On August 31, 2022, FDOT established statewide safety performance targets for calendar year 2023. The MPO adopted safety targets for calendar year 2023 on January 23, 2023. For the first time, the MPO Board adopted safety targets of zero for all five performance measures.

### Statewide Highway Safety Performance Targets

Performance Measure	CY 2023 Statewide Target
Number of fatalities	0
Rate of fatalities per 100 million vehicle miles traveled (VMT)	0
Number of serious injuries	0
Rate of serious injuries per 100 million vehicle miles traveled (VMT)	0
Number of non-motorized fatalities and serious injuries	0

### MPO Safety Performance Targets

Performance Measure	CY 2023 MPO Target	CY 2023 Projected*
Number of fatalities	0	134
Rate of fatalities per 100 million vehicle miles traveled (VMT)	0	1.56
Number of serious injuries	0	1,379
Rate of serious injuries per 100 million vehicle miles traveled (VMT)	0	16.19
Number of non-motorized fatalities and serious injuries	0	187

Projection based on 5-year rolling averages.  
 \* Projection based on available data from 1/1/2015 to 12/20/2022.  
 Source: Signal4 Analytics. December 2021.

The Sarasota/Manatee MPO, along with FDOT and other traffic safety partners, shares a high concern about the unacceptable number of traffic fatalities, both statewide and nationally. As such, on January 23, 2023, the Sarasota/Manatee MPO agreed to support FDOT’s statewide safety performance targets for calendar year 2023, thus agreeing to plan and program projects in the TIP that once implemented, are anticipated to make progress toward achieving the statewide targets. The safety initiatives within this TIP are intended to contribute toward achieving these targets. To demonstrate a concerted commitment to traffic safety considering increasing crash trends in the MPO area, the MPO Board voted to establish zero for the 2023 Safety Targets.

### Sarasota/Manatee MPO Annual Crashes

Performance Measure	Annual Crashes								
	2014	2015	2016	2017	2018	2019	2020	2021	2022*
Number of Fatalities	80	114	139	103	126	114	126	132	122
Fatality Rate	1.05	1.44	1.70	1.25	1.50	1.34	1.56	1.56	1.43
Number of Serious Injuries	955	1,391	1,858	1,508	1,425	1,340	966	928	880
Serious Injuries Rate	12.52	17.55	22.78	18.31	17.02	15.80	11.94	10.94	10.35
Non-Motorized Fatalities and Serious Injuries	154	181	202	189	169	181	159	176	172

 \* Projection based on available data from 1/1/2015 to 12/20/2022.  
 Source: Signal4 Analytics, December 2022

Figure 1 below represents both annual fatalities (2011-2022) and five-year average of fatalities (2015-2022) in the two-county region. The five-year average of roadway fatalities has consistently increased from 2015 to 2022; about a 45 percent change. Roadway fatalities suffered in 2022 (est. total 132) are nearing a peak of roadway fatalities suffered in 2016 (total 139). The trends in the data suggest that the total number of roadway fatalities in 2023 may be greater than in 2022.

While the two-county area is experiencing a historically increasing trend in roadway fatalities, serious injuries have steadily declined since 2016 (see Figure 2 below). Between 2011 and 2022, total serious injuries suffered in roadway crashes peaked in 2016 at 1,858 and has decreased to an estimated 878 in 2022.

The five-year average of nonmotorized deaths and serious injuries has steadily increased from 144 in 2015 to 184 in 2019 (Figure 3 below). In 2020, nonmotorized death and serious injuries has declined somewhat to 175 in 2021, and an estimated 173 in 2022 (five-year average). Annual counts of nonmotorized deaths and serious injuries. Annual counts of nonmotorized deaths and serious injuries have increased from 2020 to 2022, suggesting a potentially greater number of victims in 2023.

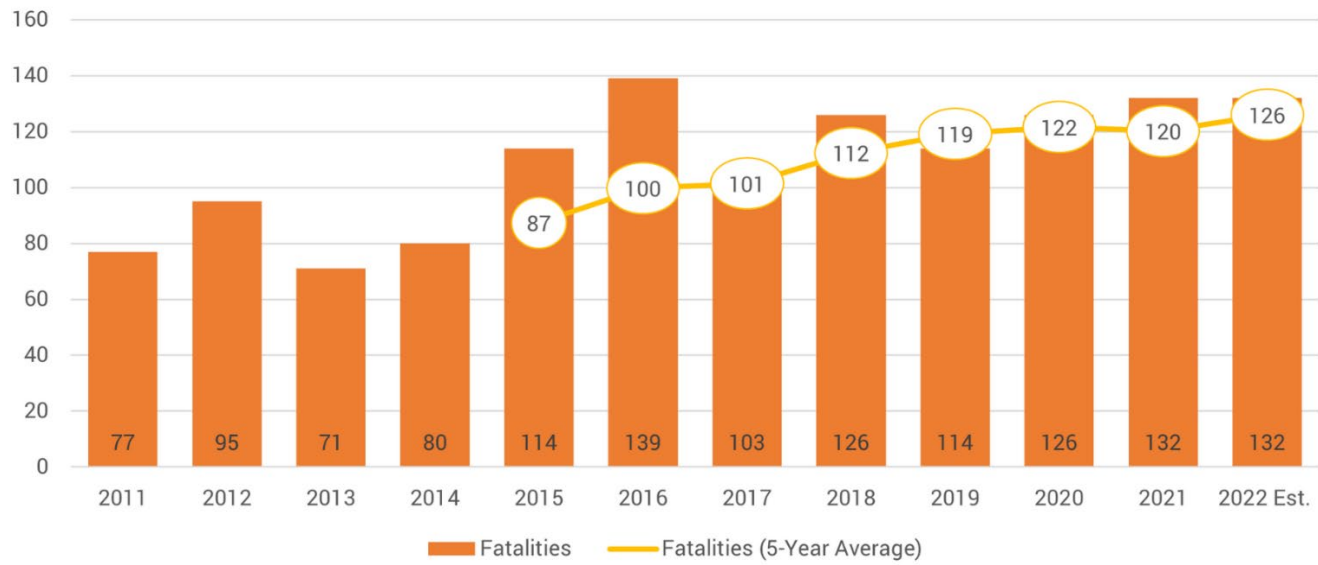

Figure 1 MPO Area Fatalities

Figure 2 MPO Area Serious Injuries

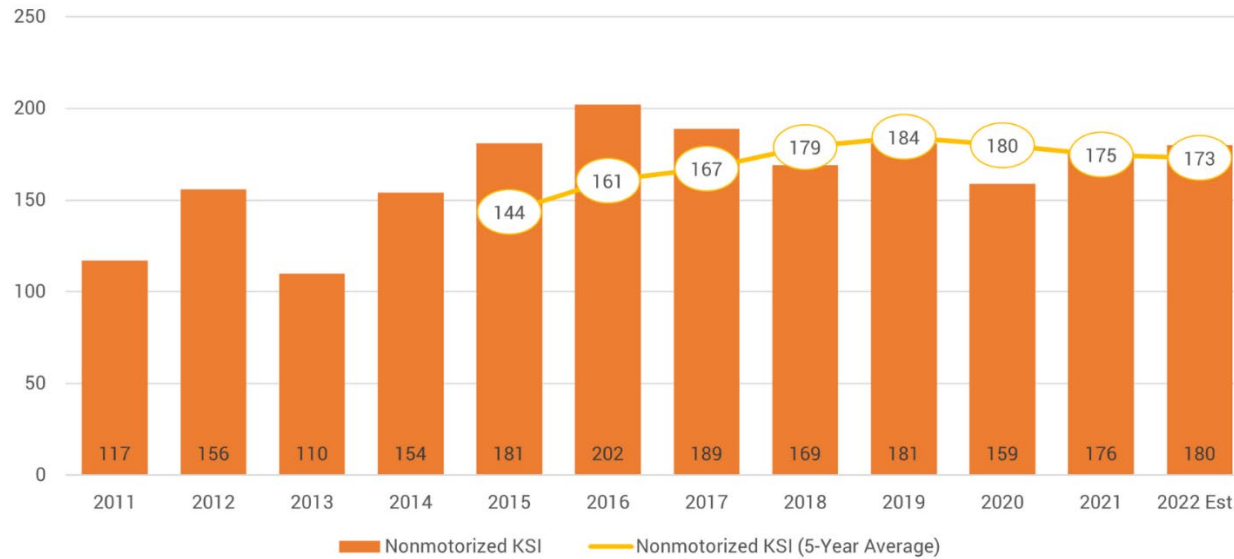

Figure 3 MPO Area Nonmotorized Fatalities and Serious Injuries (KSI)

The MPO has projected an increase in all five safety performance measures from 2022 to 2023. The MPO Board adopted safety targets of zero for all five safety performance measures for 2023. This is in support of the state’s safety measures and to communicate a clear zero tolerance stance on life ending and life altering roadway crashes in the two-county region.

### Sarasota/Manatee MPO Five-Year Rolling Averages

Performance Measures	5-Year Rolling Averages								
	2016	2017	2018	2019	2020	2022 Adopted Targets	2022 Estimated	2023 Adopted Targets	2023 Projected
Number of Fatalities	102	103	112	115	115	101	124	0	133
Fatality Rate	1.32	1.38	1.51	1.49	1.49	1.22	1.48	0	1.56
Number of Serious Injuries	1,136	1,282	1,430	1,438	1,440	1,115	1,108	0	1,379
Serious Injuries Rate	14.57	16.65	19.37	19.59	20.85	11.55	13.21	0	16.19
Non-Motorized Fatalities and Serious Injuries	168	168	173	170	163	158	172	0	187

\*2022 data are estimates based on available data through December 20, 2022, and interpolated for 12 months.

The TIP includes transportation investment projects that support the MPO's long-range goals, including the safety and security of all roadway users, using a prioritization and project selection process. The TIP prioritization process continues to use a data-driven method to evaluate projects that have an anticipated effect of reducing both fatal and serious injury crashes. The MPO's goal of reducing fatal and serious injury crashes for all roadway users is linked to this investment plan and the process used in prioritizing the projects is consistent with federal requirements.

The Sarasota/Manatee MPO supports safety programs including Safe Routes to Schools (SRTS) and the Community Traffic Safety Team (CTST) where local law enforcement, emergency responders, jurisdiction engineers, and the school boards meet and coordinate to tackle safety issues within the region. The following safety factors are considered in the project prioritization process. Does the project:

- Address an identified motorized or non-motorized high crash location?
- Improve safety for vulnerable users?
- Improve traffic flow on an evacuation route?

The MPO uses a project prioritization process with defined project selection criteria related to safety conditions in the LRTP and TIP selection process. Refer to the Project Prioritization Evaluation Criteria and Scoring table in section 2.05 Project Prioritization for more details on the scoring criteria.

All projects in this TIP support progress towards achieving the safety performance targets, through their adherence to the MPOs policies, programs, and standards related to safety.

In FY 2017/18 the MPO conducted an in-depth analysis of all crashes. Using crash patterns identified throughout the region, the MPO developed a set of mitigation strategies aimed at improving multi modal roadway safety. In 2020, the MPO analyzed the US 41 Multi Modal Emphasis Corridor (MMEC) to examine existing conditions along the corridor and to identify potential safety and mobility assessments that address the MPO's safety, mobility, and environmental and livability performance measures. US 41 MMEC is a program included in the past two Long Range Transportation Plans (LRTP). The program was expanded to include seven additional corridors in the Transform 2045 Long Range Transportation Plan (LRTP). For the 2045 LRTP, the MPO updated the 2019 Safety Report to incorporate in the 25-year long range transportation plan. Based on the safety recommendations from the 2018 safety analysis, the 2020 US 41 MMEC study, as well as high crash locations throughout the region, a list of over 70 high priority locations has been identified (see the table below).

On February 28, 2022, the Sarasota/Manatee MPO Governing Board adopted *Destination Zero: The Sarasota/Manatee Path to Zero Fatalities and Serious Injuries*. This **safety action plan** outlines a set of six holistic and comprehensive strategies for making significant reductions in the counts and rates of motorized and non-motorized serious injury and fatal crashes. Development of the Safety Action Plan was data-driven and structured around the **Safe System Approach**. The MPO Board also approved the formation of a dedicated **Destination Zero Advisory Group** to facilitate implementation of the Destination Zero Action Plan. Comprised of safety, transportation, and engineering professionals from the MPO's jurisdictional partners, the Advisory Group exists to help local jurisdiction develop and adopt their own Destination Zero Action Plan.

## High Crash Safety Priority Locations

Jurisdiction	Facility	From	To
Sarasota County	US 41/ S Tamiami Trl	at Stickney Point Rd	
Manatee County	SR 70/ 53rd Ave W	at Tara Blvd

### Systemic Mitigation Strategies

Vehicular	Signal backplates, signal head placement, flashing yellow arrow protected/permissive signals, access management
Vulnerable Users	Street lighting, sidewalk connections, signage, crosswalks, restriping
Senior Road Users	Delineation of edge lines and curbs, left turn traffic control, street name signs, intersection lighting, high visibility crosswalks, reduce left turn conflict intersections, route shield markings, use of highly reflective marking materials

The Sarasota/Manatee MPO continues monitoring investments in the TIP and demonstrating progress toward goals and objectives. The 2023/4-2027/8 TIP includes \$95.44 million to fund 35 projects aimed at improving safety between the two counties. These projects fall in the following categories:

- Bike lanes / Sidewalks / Trails
- Lighting
- Traffic control devices / system
- Safety projects
- Pedestrian Crossings / Push button
- Corridor & intersection improvements
- Add turning lanes
- Signing and pavement markings

## Sarasota/Manatee MPO Sample Safety Projects

Project Number	Project Name	County	Type of Work
448390	SR 45 (US 41) from 63 <sup>rd</sup> Ave to 53 <sup>rd</sup> Ave	Manatee	Safety Project
449646	US 41 from 53 <sup>rd</sup> Ave to Cortez Rd	Manatee	Safety Project
449653	US 41 from Magellan Dr to 63 <sup>rd</sup> Ave	Manatee	Safety Project
449654	15 <sup>th</sup> St from 30 <sup>th</sup> Ave E to 26 <sup>th</sup> Ave E	Manatee	Safety Project
451946	37 <sup>th</sup> Ave E from 11 <sup>th</sup> St Ct E to 15 <sup>th</sup> St E	Manatee	Rail Safety Project
449483	Prine Elementary School – Safe Routes to School	Manatee	Sidewalk
438992	Southern Parkway West from 43 <sup>rd</sup> St W to 26 <sup>th</sup> St W	Manatee	Sidewalk
440440	Ellenton Gillette Rd (CR 683) from Memphis Rd to Mendoza Rd	Manatee	Sidewalk
444904	SR 45 (USB 41) 8 <sup>th</sup> Ave W	Manatee	Pedestrian Midblock Crossing
452379 1	Legacy Trail from Beneva at Legacy Trail	Sarasota	Bike Path/Trail (Overpass)
452379 2	Legacy Trail from Bahia Vista at Legacy Trail	Sarasota	Bike Path/Trail (Overpass)
447870	SR 683 at University Pkwy	Sarasota	Safety Project
447871	SR 780 (Fruitville Rd) at Beneva Rd	Sarasota	Safety Project
447872	SR 683 (US 301) from 12 <sup>th</sup> St to Dr MLK Jr Way	Sarasota	Safety Project
447882	Sr 776 from Charlotte County Line to Tangerine Woods Blvd	Sarasota	Median Modification
447887	SR 72 from Swift Rd to Sawyer Rd	Sarasota	Median Modification

**Pavement and Bridge Condition Measures (PM2):** In January 2017, USDOT published the Pavement and Bridge Condition Performance Measures Final Rule, which is also referred to as the PM2. This rule establishes the following six performance measures:

- Percent of Interstate pavements in good condition; and
- Percent of Interstate pavements in poor condition; and
- Percent of non-Interstate National Highway System (NHS) pavements in good condition; and
- Percent of non-Interstate NHS pavements in poor condition; and
- Percent of NHS bridges by deck area classified as in good condition; and
- Percent of NHS bridges by deck area classified as in poor condition.

For the pavement measures, five pavement metrics are used to assess condition:

- International Roughness Index (IRI) – an indicator of roughness; applicable to all asphalt and concrete pavements; and
- Cracking Percent – the percentage of the pavement surface exhibiting cracking; applicable to all asphalt and concrete pavements; and
- Rutting – extent of surface depressions; applicable to asphalt pavements; and
- Faulting – vertical misalignment of pavement joints; applicable to certain types of concrete pavements; and
- Present Serviceability Rating (PSR) – a quality rating applicable only to certain lower speed roads.

For each pavement metric, a threshold is used to establish the good, fair, or poor condition. Using these metrics and thresholds, pavement condition is assessed for each 0.1-mile section of the through travel lanes of mainline highways on the Interstate or the non-Interstate NHS. Asphalt pavement is assessed using the IRI, cracking, and rutting metrics, while jointed concrete is assessed using IRI, cracking, and faulting. For these two pavement types, a pavement section is rated good if the ratings for all three metrics are good, and poor if the ratings for two or more metrics are poor.

Continuous concrete pavement is assessed using the IRI and cracking metrics. For this pavement type, a pavement section is rated good if both metrics are rated good, and poor if both metrics are rated poor. If a state collects and reports PSR for any applicable segments, those segments are rated according to the PSR scale. For all three pavement types, sections that are not good or poor are rated fair.

The good/poor measures are expressed as a percentage and are determined by summing the total lane miles of good or poor highway segments and dividing by the total lane miles of all highway segments on the applicable system. Pavement in good condition suggests that no major investment is needed and should be considered for preservation treatment. Pavement in poor condition suggests major reconstruction investment is needed due to either ride quality or a structural deficiency.

The bridge condition measures refer to the percentage of bridges by deck area on the NHS that are in good condition or poor condition. The measures assess the condition of four bridge components: deck, superstructure, substructure, and culverts. Each component has a metric rating threshold to establish the good, fair, or poor conditions. Each bridge on the NHS is evaluated using these ratings. If the lowest rating of the four metrics is greater than or equal to seven, the structure is classified as good. If the lowest rating is less than or equal to four, the structure is classified as poor. If the lowest rating is five or six, it is classified as fair.

The bridge measures are expressed as the percentage of NHS bridges in good or poor condition. The percent is determined by summing the total deck area of good or poor NHS bridges and dividing it by the total deck area of the bridges carrying the NHS. The deck area is computed using structure length and either deck width or approach roadway width.

A bridge in good condition suggests that no major investment is needed. A bridge in poor condition is safe to drive on; however, it is nearing a point where substantial reconstruction or replacement is needed.

Federal rules require state DOTs and MPOs to coordinate when setting pavement and bridge condition performance targets and monitor progress toward achieving the targets. States must establish:

- Four-year statewide targets for the percent of interstate pavements in good and poor condition; and
- Two-year and four-year targets for the percent of non-Interstate NHS pavements in good and poor condition; and
- Two-year and four-year targets for the percent of NHS bridges (by deck area) in good and poor condition.

MPOs must set four-year targets for all six measures. MPOs can either agree to program projects that will support the statewide targets or establish their quantifiable targets for the MPO's planning area.

On December 16, 2022, FDOT established statewide performance targets for pavement and bridge measures. Florida’s performance through 2021 exceeds the targets set in 2019 and 2021. The two-year targets represent bridge and pavement conditions at the end of the calendar year 2023, while the four-year targets represent conditions at the end of 2025. On May 22, 2023, the Sarasota/Manatee MPO agreed to support FDOT’s statewide pavement and bridge performance targets, thus agreeing to plan and program projects in the TIP that once implemented, are anticipated to make progress toward achieving the statewide targets.

### Sarasota/Manatee Infrastructure Conditions Targets

Infrastructure Condition Performance Measures/Targets	Florida 2021 Conditions	Sarasota/ Manatee 2021 Conditions	Statewide Targets 2023	Statewide Target 2025
Percent of Interstate pavements in good condition	70.5%	87.9%	60%	60%
Percent of Interstate pavements in poor condition	0.7%	0%	5%	5%
Percent of non-Interstate NHS pavements in good condition	47.5%	43.3%	40%	40%
Percent of non-Interstate NHS pavements in poor condition	1.1%	0.4%	5%	5%
Percent of NHS bridges by deck area in good condition	61.3%	43.99%	50%	50%
Percent of NHS bridges by deck area in poor condition	0.5%	1%	10%	10%

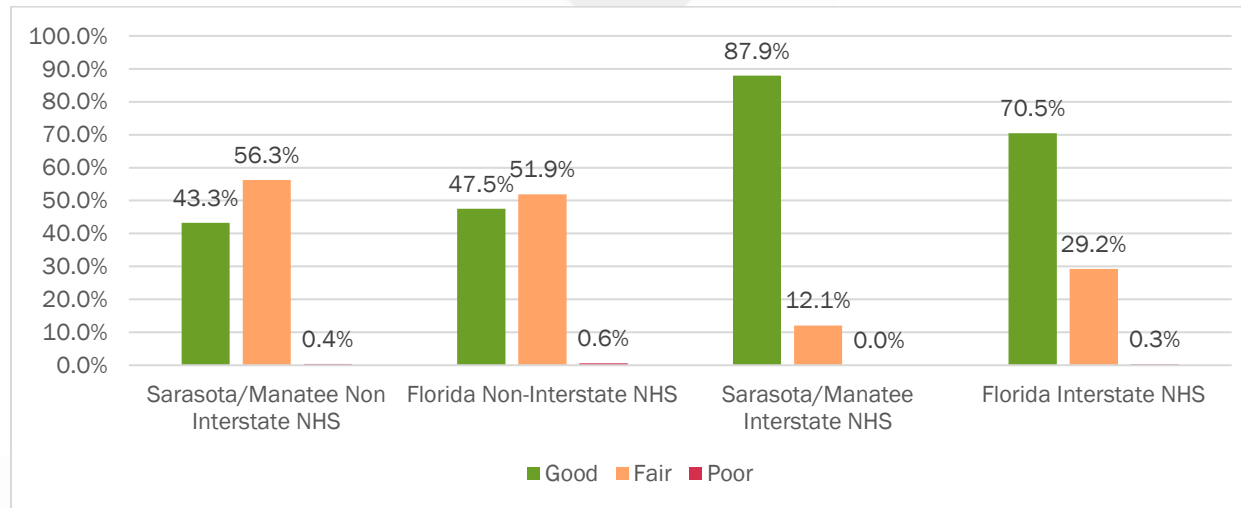

FDOT currently has the following conditions:

- 70.5% of the Interstate pavements are in good condition and 0.3 in poor condition; and
- 47.5% of the non-Interstate NHS pavements in good condition and 0.6% in poor condition; and
- 61.3% of NHS bridges by deck area are in good condition and 0.5% are in poor condition

In determining its approach to establishing performance targets for the federal pavement and bridge condition performance measures, FDOT considered many factors. To begin with, FDOT is mandated by Florida Statute 334.046 to preserve the state’s pavement and bridges to specific standards. To adhere to the statutory guidelines, FDOT prioritizes funding allocations to ensure the current transportation system is adequately preserved and maintained before funding is allocated for capacity improvements. These statutory guidelines envelop the statewide federal targets that have been established for pavements and bridges.

FDOT seeks to be conservative in its targets, while at the same time meeting the minimum condition requirements (no more than 5% of the Interstate System in poor condition and no more than 10% of NHS bridges by deck area in poor condition).

As shown below, pavement conditions in the Sarasota/Manatee region appear to match or exceed the state averages. It is important to note that at this time, less than a quarter of the road segments in the region are included in the database. All National Highway System (NHS) Interstate roadways and non-Interstate roadways that are to be assessed and included in the performance management system are state roadways except for Toledo Blade, University Parkway, and Venice Avenue.

In addition, MAP-21 requires FDOT to develop a Transportation Asset Management Plan (TAMP) for all NHS pavements and bridges within the state. The TAMP must include investment strategies leading to a program of projects that would make progress toward the achievement of the state DOT targets for asset condition and performance of the NHS. FDOT’s TAMP was updated and approved to reflect MAP-21 requirements in September 2022.

Further, the federal pavement condition measures require a new methodology that is a departure from the methods currently used by FDOT and uses different ratings and pavement segment lengths. For bridge condition, the performance is measured in the deck area under the federal measure, while the FDOT programs its bridge repair or replacement work on a bridge-by-bridge basis. As such, the federal measures are not directly comparable to the methods that are most familiar to FDOT.

In consideration of these differences, as well as other unknowns and unfamiliarity associated with the new required processes, FDOT took a conservative approach when establishing its initial pavement and bridge condition targets. FDOT intends to meet or exceed the established performance targets.

FDOT collects and reports bridge and pavement data to FHWA each year to track performance and progress toward the targets. The percentage of Florida’s bridges in good condition is slowly decreasing, which is to be expected as the bridge inventory grows older. Reported bridge and pavement data through 2021 exceeded the established targets. Based on anticipated funding levels, FDOT believes the previous targets are still appropriate for 2023 and 2025. In early 2021, FHWA determined that FDOT made significant progress toward the targets.

The Sarasota/Manatee MPO TIP reflects investment priorities established in the 2045 Long Range Transportation Plan. The focus of Sarasota/Manatee MPO’s investments in bridge and pavement condition include the following categories:

- Pavement replacement or reconstruction (on the NHS)
- New lanes or widenings of NHS facilities, including resurfacing existing NHS lanes associated with new capacity
- Bridge replacement or reconstruction
- New bridge capacity on the NHS
- System resiliency projects that improve NHS bridge components (e.g., upgrading culverts)]

### Sarasota/Manatee MPO Priority Bridges

Regional Bridge Priorities
DeSoto Bridge
Bradenton-Palmetto Connector
Anna Maria Bridge
Cortez Bridge
Longboat Pass Bridge
Coon Key Bridge
Ringling Bridge

Local Bridge Priorities
Braden River Bridge
Wares Creek Bridge
Whitaker Bayou Bridge
North Sarasota Multi modal Connector
Venice Avenue Bridge
Myakkahatchee Creek Bridge

The MPO uses a project prioritization process that uses project selection criteria related to pavement and bridge conditions in the LRTP and TIP selection process. Refer to the Project Prioritization Evaluation Criteria and Scoring table in section 2.04 Project Prioritization for more details on the scoring criteria.

The Sarasota/Manatee MPO has done an extensive analysis of the bridges in the region and has identified priorities on major arterial roadways using the volume of Average Annual Daily Traffic (AADT) on bridges over 50 years old. This analysis has expanded well beyond the 192 bridges evaluated at the state and federal level to include all 500 bridges in the Sarasota/Manatee Region. This is especially vital considering many of the most vital bridge priorities are not included in the evaluation done using state requirements. The MPO bridge priorities are listed below and several of these bridges have one or more phases completed or programmed in the TIP for funding in the next five years.

## Sarasota/Manatee Sample Projects for Pavement And Bridge Conditions

Project Number	Project Name	Type Of Work
447382 1	SR 37 From SR 62 To Polk County Line	Pavement Only Resurface
444612 1	SR 45 (Us 41) Edwards Drive To Magellan Drive	Resurfacing
196022 3	SR 64 From E Of Lena Road To Lakewood Ranch Blvd	Add Lanes & Reconstruct
430204 2	SR 684 From SR 789 (Gulf Drive) To 123rd Street W Bridge # 130006	Replace Movable Span Bridge
406314 3	I-75 From N Of North River Rd To North Of SR 681	Add Lanes & Rehabilitate Pvmnt
<i>Total Cost for All Projects Listed</i>		<b>\$241,313,469</b>

The projects included in the TIP are consistent with FDOT's Five Year Work Program, and therefore FDOT's approach to prioritizing funding to ensure the transportation system is adequately preserved and maintained. Per federal planning requirements, the state selects projects on the NHS in cooperation with the MPO from the approved TIP. Given the significant resources devoted in the TIP to pavement and bridge projects, the MPO anticipates that once implemented, the TIP will contribute to progress towards achieving the statewide pavement and bridge condition performance targets.

**System Performance, Freight, and Congestion Measures (PM3):** In January 2017, USDOT published the System Performance/Freight/CMAQ Performance Measures Final Rule to establish measures to assess passenger and freight performance on the Interstate and non-Interstate National Highway System (NHS), and traffic congestion and on-road mobile source emissions in areas that do not meet federal National Ambient Air Quality Standards (NAAQS). The rule, which is referred to as the PM3 rule, requires state DOTs and MPOs to establish targets for the following six performance measures:

### National Highway Performance Program (NHPP)

- Percent of person-miles on the Interstate system that are reliable, also referred to as Level of Travel Time Reliability (LOTTR);
- Percent of person-miles on the non-Interstate NHS that are reliable (LOTTR);

### National Highway Freight Program (NHFP)

- Truck Travel Time Reliability Index (TTTR);

### Congestion Mitigation and Air Quality Improvement Program (CMAQ)

- Annual hours of peak hour excessive delay per capita (PHED); and
- Percent of non-single occupant vehicle travel (Non-SOV); and
- Cumulative 2-year and 4-year reduction of on-road mobile source emissions (NOx, VOC, CO, PM10, and PM2.5) for CMAQ-funded projects.

In Florida, only the two LOTTR performance measures and the TTTR performance measure apply. Because all areas in Florida meet current NAAQS, the last three listed measures pertaining to the CMAQ Program do not currently apply in Florida. A description of the applicable measures follows.

The Level of Travel Time Reliability (LOTTR) performance measure assesses the percent of person-miles traveled on the Interstate or the non-Interstate NHS that is reliable. LOTTR is defined as the ratio of longer travel times (80<sup>th</sup> percentile) to a normal travel time (50<sup>th</sup> percentile) over all applicable roads, between the hours of 6 a.m. and 8 p.m. each day. The measures are expressed as the percent of person-miles traveled on the Interstate or Non-Interstate NHS system that is reliable. Person miles take into account the number of people traveling in buses, cars, and trucks over these roadway segments.

The Truck Travel Time Reliability (TTTR) performance measure assesses the reliability index for trucks traveling on the interstate. A TTTR ratio is generated by dividing the 95<sup>th</sup> percentile truck travel time by a normal travel time (50<sup>th</sup> percentile) for each segment of the Interstate system over specific time periods throughout weekdays and weekends. This is averaged across the length of all Interstate segments in the state or MPO planning area to determine the TTTR index.

Federal rules require state DOTs and MPOs to coordinate when setting LOTTR and TTTR performance targets and monitor progress toward achieving the targets. States must establish:

- Two-year and four-year statewide targets for percent of person-miles on the Interstate system that are reliable; and
- Four-year targets for the percent of person-miles on the non-Interstate NHS that are reliable; and
- Two-year and four-year targets for truck travel time reliability

MPOs must establish four-year targets for all three measures. MPOs can either agree to program projects that will support the statewide targets or establish their quantifiable targets for the MPO's planning area.

On December 16, 2022, FDOT established statewide performance targets for the system performance measures. On May 22, 2023, the Sarasota/Manatee MPO agreed to support FDOT's statewide system performance targets, thus agreeing to plan and program projects in the TIP that once implemented, are anticipated to make progress toward achieving the statewide targets.

### System Performance Targets

System Performance/Freight/Congestion Performance Measures/Targets	Florida 2021 Conditions	Sarasota/Manatee 2021 Conditions	Statewide Targets 2023	Statewide Target 2025
Percent of person-miles on the Interstate system that are reliable (Interstate LOTTR)	87.5%	92.6%	75%	70%
Percent of person-miles on the non-Interstate NHS that are reliable (Non-Interstate NHS LOTTR)	92.9%	95%	50%	50%
Truck travel time reliability (TTTR)	1.38	1.42	1.75	2

FDOT currently has the following conditions:

- 87.5% of person-miles traveled on the Interstate that is reliable; and
- 92.9% of person-miles traveled on the non-Interstate that are reliable; and
- 1.38 truck travel time reliability index

In establishing these targets, FDOT reviewed external and internal factors that may affect reliability; analyzed travel time data from the National Performance Management Research Dataset (NPMRDS) developed a sensitivity analysis indicating the level of risk for road segments to become unreliable.

The federal travel time reliability measures follow a new methodology that differs from prior Florida efforts. In addition, beginning in 2017, the NPMRDS expanded its coverage of travel segments, and a new vendor began to supply the dataset, creating a difference in reliability performance results on non-Interstate NHS segments between pre-2017 trends and later trends. These factors create challenges for establishing a confident trend line to inform target setting for the next two to four years.

In consideration of these differences, as well as other unknowns and unfamiliarity associated with the new required processes, FDOT took a conservative approach when establishing its initial statewide system performance and freight targets.

FDOT collects and reports reliability data to FHWA each year to track performance and progress toward the reliability targets. Performance for all three measures improved from 2017 to 2021, with some disruption in the trend during the global pandemic in 2020. Actual performance in 2019 was better than the 2019 targets, and in early 2021 FHWA determined that FDOT made significant progress toward the 2019 targets. FHWA's assessment of progress toward the 2021 targets is anticipated to be released in March 2023

System performance and freight are addressed through several statewide initiatives:

- Florida’s Strategic Intermodal System (SIS) is composed of transportation facilities of statewide and interregional significance. The SIS is a primary focus of FDOT’s capacity investments and is Florida’s primary network for ensuring a strong link between transportation and economic competitiveness. These facilities, which span all modes and include highways, are the workhorses of Florida’s transportation system and account for a dominant share of the people and freight movement to, from, and within Florida. The SIS includes 92 percent of NHS lane miles in the state. Thus, FDOT’s focus on improving the performance of the SIS goes hand-in-hand with improving the NHS, which is the focus of the FHWA’s TPM program. The SIS Policy Plan will be updated in 2021 consistent with the updated FTP. The SIS Policy Plan defines the policy framework for designating which facilities are part of the SIS, as well as how SIS investment needs are identified and prioritized. The development of the SIS Five-Year Plan by FDOT considers scores on a range of measures including mobility, safety, preservation, and economic competitiveness as part of FDOT’s Strategic Investment Tool (SIT).
- In addition, FDOT’s Freight Mobility and Trade Plan (FMTP) defines policies and investments that will enhance Florida’s economic development efforts into the future. The FMTP identifies truck bottlenecks and other freight investment needs and defines the process for setting priorities among these needs to receive funding from the National Highway Freight Program (NHFP). Project evaluation criteria tie back to the FMTP objectives to ensure high priority projects support the statewide freight vision. In February 2018, FHWA approved the FMTP as FDOT’s State Freight Plan.
- FDOT also developed and refined a methodology to identify freight bottlenecks on Florida’s SIS on an annual basis using vehicle probe data and travel time reliability measures. Identification of bottlenecks and estimation of their delay impact aids FDOT in focusing on relief efforts and ranking them by priority. In turn, this information is incorporated into FDOT’s SIT to help identify the most important SIS capacity projects to relieve congestion.

To compare the MPO region to the state, 2014-2017 travel time data was obtained from the first and second versions of the National Performance Measures Research Dataset (NPMRDS). One of the challenges in using this data is that FHWA changed vendors, so the first data set is from HERE and the second data set is from INRIX. This change has resulted in some significant differences in the data, but these changes are consistent for every organization trying to forecast reliability.

When expressed as a percentage, travel time reliability refers to the percentage of people who will experience reliability for the road system. Using this as a guide, the first chart below tells us that in 2018, 80% of drivers on Florida Interstates will find their trip to have reliably normal travel times between 6:00 a.m. and 8:00 p.m. Both charts project a gradual but steady reduction in reliability for the region and the state.

### Travel Time Reliability for Interstates - Florida and Sarasota/Manatee

Reliable Person-Miles Traveled	2014	2015	2016	2017	2018	2019	2020	2021
Florida	88%	86%	85%	82%	83%	83%	92%	88%
MPO	100%	97%	93%	92%	93%	92%	96%	93%
Percentages based on data								

### Travel Time Reliability for Non-Interstate NHS – Florida and Sarasota/Manatee

Reliable Person-Miles Traveled	2014	2015	2016	2017	2018	2019	2020	2021
Florida	63%	59%	57%	84%	86%	87%	94%	93%
MPO	76%	71%	60%	91%	93%	92%	94%	95%
Percentages based on data								

Truck travel time is presented as an index that averages all segments and all time periods in the data collection area. In this case, as the index numbers increase, reliability for truck travel declines. Through 2018, trucks traveling in the Sarasota/Manatee region are experiencing reliability very close to the rest of the state. However, future year projections indicate conditions will worsen for trucks in the region more than the rest of the state. This will need to be monitored closely as new, more consistent data becomes available.

### Truck Travel Time Reliability Index – Florida and Sarasota/Manatee

Truck Travel Time Reliability Index	2014	2015	2016	2017	2018	2019	2020	2021
Florida	1.42	1.45	1.44	1.43	1.43	1.45	1.34	1.38
MPO	1.29	1.51	1.6	1.45	1.39	1.41	1.28	1.42
Percentages based on data								

Interstate reliability remained relatively consistent for the Sarasota/Manatee MPO. Over the four-year time period analyzed, both the statewide and MPO region interstate reliability appears to be on a gradual decline. Non-interstate and freight reliability showed an unstable trend for the state and the region between 2016 and 2017. This is likely due to the data collection practices and the evolving quality of probe speed data on arterials collected by different vendors rather than a reflection of a genuine trend on the ground. As a result of these inconsistencies FDOT set very conservative and attainable targets.

FDOT set statewide targets on December 16, 2022. The Sarasota/Manatee MPO supports FDOT’s statewide system performance targets, thus agreeing to plan and program projects in the TIP that will once be implemented will make progress toward achieving the statewide targets.

The Sarasota/Manatee MPO TIP reflects investment priorities established in the 2045 Long Range Transportation Plan. The focus of Sarasota/Manatee MPO’s investments that address system performance and freight include the following categories:

- Corridor improvements
- Intersection improvements (on NHS roads)
- Projects evaluated in the CMP and selected for the TIP

- Investments in transit, bicycle, or pedestrian systems that promote mode shift
- Managed lanes
- Freight improvements (Interstate) that increase reliability (could include improved weigh stations, addressing identified truck bottlenecks on the Interstate, etc.).
- TSMO/ITS projects or programs
- Travel demand management programs, park and ride lots, etc.]

The MPO uses a project prioritization process with project selection criteria related to pavement and bridge conditions in the LRTP and TIP selection process. Refer to the Project Prioritization Evaluation Criteria and Scoring table in section 2.04 Project Prioritization for more details on the scoring criteria.

As part of the Congestion Management Plan (CMP) update, the MPO has evaluated corridors and intersections to determine the corresponding Level of Travel Time Reliability (LOTTR). Any intersection or segment with a ratio of 1.50 or higher is deemed unreliable. Below are the top 10 intersections and the top 10 segments for the Sarasota/Manatee region from the 2020 update of the CMP.

### Sarasota/Manatee MPO Top 10 Unreliable Intersections

Rank	Intersection	County	LOTTR
1	Sunset Beach Dr to Shamrock Dr*	Sarasota	1.82
2	6 <sup>th</sup> Ave W to 14 <sup>th</sup> St W	Manatee	1.80
3	Manatee Ave W to US 41/1 <sup>st</sup> St W	Manatee	1.71
4	Manatee Ave E to 15 <sup>th</sup> St E	Manatee	1.60
5	Cortez Rd W to Gulf Dr N	Manatee	1.60
6	Fruitville Rd to US 301/Washington Blvd	Sarasota	1.58
7	6 <sup>th</sup> Ave W to 9 <sup>th</sup> St W	Manatee	1.55
8	SR 70 to Wachula Rd	Manatee	1.54
9	South Venice Blvd to US 41/Tamiami Trl	Sarasota	1.53
10	Sunset Beach Dr to US 41/Tamiami Trl	Sarasota	1.50

\*Pending reliability data review.

### Sarasota/Manatee MPO Top 10 Unreliable Segments

Rank	Segment	County	LOTTR
1	US 301/Washington Blvd from Main St to Brother Greenen Way	Sarasota	2.36
2	1 <sup>st</sup> St from US 41 Merge W/US 301 (13 <sup>th</sup> Ave E)	Manatee	2.32
3	I-75 from NB University Off Ramp to NB University on Ramp	Manatee	2.21
4	I-75 from Richardson Rd to University Pkwy	Sarasota	2.21
5	6 <sup>th</sup> Ave W from 9 <sup>th</sup> St W to 1 <sup>st</sup> St	Manatee	2.16
6	Manatee Ave W from 26 <sup>th</sup> St W to 15 <sup>th</sup> St W	Manatee	1.78
7	8 <sup>th</sup> Ave W from Riverside Dr to 10 <sup>th</sup> St W	Manatee	1.64
8	US 41/1 <sup>st</sup> St E from 26 <sup>th</sup> Ave E to US 301 Entrance	Manatee	1.62
9	Osprey Rd from Macon Rd to Colonial Rd	Sarasota	1.54
10	Gulf Dr S from South Coquina Beach Park to Cortez Rd W	Manatee	1.50

### Sarasota/Manatee Sample Projects System Performance, Freight and Congestion

Project Number	Project Name	Type of Work
196022 5	SR 64 @ Rye Road	Roundabout
196022 6	SR 64 At Lorraine Road	Roundabout
444251 1	Port Manatee Intermodal Cargo Yard improvements	Seaport Capacity Project
196022 7	SR 64 At Greyhawk Blvd Intersection Improvements	Intersection Improvement
412673 1	Manatee County Tsmca	Traffic Control Devices/System
433142 3	10th Ave From Riverside Drive To 17th Street	Urban Corridor Improvements
446815 1	SR 789 (Gulf Of Mexico Dr) From Channel PI To Longboat Club Rd	Add Left Turn Lane(S)
Total Cost for all Projects Listed		\$40,864,363

The projects included in the TIP are consistent with FDOT's Five Year Work Program, and therefore FDOT's approach to prioritizing funding to address performance goals and targets. Per federal planning requirements, the state selects projects on the NHS in cooperation with the MPO from the approved TIP. Given the significant resources devoted in the TIP to programs that address system performance and freight, the implementation of the TIP is expected to aid in the advancement towards accomplishing the statewide reliability performance objectives, as projected by MPO.

**Transit Asset Performance:** On July 26, 2016, FTA published the final Transit Asset Management rule. This rule applies to all recipients and subrecipients of Federal transit funding that own, operate, or manage public transportation capital assets. The rule defines the term “state of good repair,” requires that public transportation providers develop and implement transit asset management (TAM) plans and establishes state of good repair standards and performance measures for four asset categories: rolling stock, equipment, transit infrastructure, and facilities. The rule became effective on October 1, 2018.

The table below identifies performance measures outlined in the final rule for transit asset management.

Asset Category	Performance Measure
Equipment	Percentage of non-revenue, support-service and maintenance vehicles that have met or exceeded their Useful Life Benchmark
Rolling Stock	Percentage of revenue vehicles within a particular asset class that have either met or exceeded their Useful Life Benchmark
Infrastructure	Percentage of track segments with performance restrictions
Facilities	Percentage of facilities within an asset class rated below condition 3 on the TERM scale

For equipment and rolling stock classes, Useful Life Benchmark (ULB) is defined as the expected lifecycle of a capital asset, or the acceptable period of use in service, for a particular transit provider’s operating environment. ULB considers a provider’s unique operating environment such as geography, service frequency, etc., and is not the same as an asset’s useful life.

Public transportation agencies are required to establish and report transit asset management targets annually for the following fiscal year. Each public transit provider or its sponsors must share its targets with each MPO in which the transit provider’s projects and services are programmed in the MPO’s TIP. MPOs are required to establish initial transit asset management targets within 180 days of the date that public transportation providers establish initial targets. However, MPOs are not required to establish transit asset management targets annually each time the transit provider establishes targets. Instead, subsequent MPO targets must be established when the MPO updates or amends the TIP or LRTP. When establishing transit asset management targets, the MPO can either agree to program projects that will support the transit provider targets or establish its own separate regional transit asset management targets for the MPO planning area. MPO targets may differ from agency targets, especially if there are multiple transit agencies in the MPO planning area. To the maximum extent practicable, transit providers, states, and MPOs must coordinate with each other in the selection of performance targets.

The TAM rule defines two tiers of public transportation providers based on size parameters. Tier I providers are those that operate rail service or more than 100 vehicles in all fixed route modes, or more than 100 vehicles or more in one non-fixed route mode. Tier II providers are those that are a subrecipient of FTA 5311 funds, or an American Indian Tribe, or have 100 or fewer vehicles across all fixed route models or have 100 vehicles or less in one non-fixed route mode. A Tier I provider must establish its own transit asset management targets, as well as report performance and other data to FTA. A Tier II provider has the option to establish its own targets or to participate in a Group Plan with other Tier II providers whereby targets are established by a plan sponsor, typically a state DOT, for the entire group.

The Sarasota/Manatee MPO planning area is served by two (2) transit service providers: Manatee County Area Transit (MCAT) and Sarasota County Area Transit (SCAT). The Sarasota/Manatee MPO TIP was developed and is managed in cooperation with MCAT and SCAT. It reflects the investment priorities established in the Transform 2045 Long Range Transportation Plan and documents local and FTA funds to be used for TAM, along with Surface Transportation Program funds – based on MPO priorities in previous years. The MPO supports both MCAT and SCAT’s transit asset targets and agrees to plan and program projects in the TIP that will, once implemented, make progress toward achieving the transit provider’s targets. FTA funding, as programmed by the region’s transit providers and FDOT, is used for programs and products to improve the condition of the region’s transit assets. The focus of Sarasota/Manatee MPO’s investments that address transit state of good repair include:

**MCAT**

- Operating fixed route
- Capital for fixed route
- Anna Maria Island Trolley enhanced transit services
- Purchase vehicles/equipment

**SCAT**

- Operating fixed route
- Capital for fixed route

Transit asset condition and state of good repair is a consideration in the methodology Sarasota/Manatee MPO uses to select projects for inclusion in the TIP. The TIP includes specific investment priorities that support all of the MPO’s goals, including transit state of good repair, using a prioritization and project selection process established in the LRTP. This process evaluates projects that, once implemented, are anticipated to improve transit state of good repair in the MPO’s planning area. The MPO’s goal of supporting local transit providers to achieve transit asset condition targets is linked to this investment plan, and the process used to prioritize the projects within the TIP is consistent with federal requirements.

The Sarasota/Manatee MPO FY 2023/24 – 2027/28 TIP has been evaluated and the anticipated effect of the overall program is that, once implemented, progress will be made towards achieving the transit asset performance targets. The Sarasota/Manatee MPO continues to coordinate with Manatee County Area Transit and Sarasota County Area Transit to maintain the region’s transit assets in a state of good repair. The TIP devotes resources to projects that will maintain and improve transit state of good repair. Investments in transit assets in the 2023/24 – 2027/28 TIP total \$3,403,942,207. These funds cover capital for fixed routes, including vehicle purchases, facility improvements, safety, and other investments.

The transit asset management targets are based on the condition of existing transit assets and planned investments in equipment, rolling stock, and facilities. The targets reflect the most recent data available on the number, age, and condition of transit assets, and expectations and capital investment plans for improving these assets. The table summarizes both existing conditions for the most recent year available, and the targets.

**Manatee County Area Transit (MCAT) Transit Asset Targets**

Asset Category	Performance Measure	Asset Class	Useful Life Benchmark	2022 Asset Condition	2022/2023 Target
Rolling Stock	Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	CU-Cutaway	5 years or 200,000 miles	56%	50%
		MB-Motor Bus	12 and 10 years or 500,000 miles	30%	10%
		MV-Minivans	4 years	14%	15%
Equipment	Age - % of non-revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	Non-Revenue/ Service Automobiles	4 years or 100,000 miles	0%	0%
		Non-Revenue/Service Trucks	4 years or 100,000 miles	71%	59%
Facilities	Condition - % of facilities with a condition rating below 3.0 on the FTA Transit Economic Requirements Model (TERM) Scale	Administration/ Maintenance Facility and three transfer stations	n/a	0%	0%

**Sarasota County Area Transit (SCAT) Transit Asset Targets**

Asset Category	Performance Measure	Asset Class	Useful Life Benchmark	Existing Asset Condition	2022/2023 Target
Rolling Stock	Age - % of revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	Cutaway Buses	5 - 7 years and/or 200,000 miles	38.24%	38.24%
		Motor Bus	12 years or 500,000	0%	0%
Equipment	Age - % of non-revenue vehicles within a particular asset class that have met or exceeded their Useful Life Benchmark (ULB)	Non-Revenue/ Service Automobiles	5 - 8 years and/or 100,000 miles	38.10%	11.11%
Facilities	Condition - % of facilities with a condition rating below 3.0 on the FTA Transit Economic Requirements Model (TERM) Scale	Administration/ Maintenance Facility	Rated under 3.0 on TERM scale	0%	0%
		Passenger Facility	Rated under 3.0 on TERM scale	0%	0%

**Transit Safety Performance:** FTA's Public Transportation Agency Safety Plan (PTASP) regulations established transit safety performance management requirements for providers of public transportation systems that receive federal financial assistance under 49 U.S.C. Chapter 53.

The regulations apply to all operators of public transportation that are a recipient or sub-recipient of FTA Urbanized Area Formula Grant Program funds under 49 U.S.C. Section 5307, or that operate a rail transit system that is subject to FTA's State Safety Oversight Program. The PTASP regulations do not apply to certain modes of transit service that are subject to the safety jurisdiction of another Federal agency, including passenger ferry operations regulated by the United States Coast Guard, and commuter rail operations that are regulated by the Federal Railroad Administration.

The PTASP must include performance targets for the performance measures established by FTA in the National Public Transportation Safety Plan, which was published on January 28, 2017. The transit safety performance measures are:

1. Total number of reportable fatalities and rate per total vehicle revenue miles by mode.
2. Total number of reportable injuries and rate per total vehicle revenue miles by mode.
3. Total number of reportable safety events and rate per total vehicle revenue miles by mode.
4. System reliability - mean distance between major mechanical failures by mode.

In Florida, each Section 5307 and 5311 transit providers must develop a System Safety Program Plan (SSPP) under Chapter 14-90, Florida Administrative Code. FDOT technical guidance recommends that Florida's transit agencies revise their existing SSPPs to be compliant with the new FTA PTASP requirements.

Each provider of public transportation that is subject to the PTASP regulations must certify that its SSPP meets the requirements for a PTASP, including transit safety targets for the federally required measures. Providers were required to certify their initial PTASP and safety targets by July 20, 2021. Once the public transportation provider establishes safety targets it must make the targets available to MPOs to aid in the planning process. MPOs had 180 days after receipt of the PTASP targets to establish transit safety targets for the MPO planning area. MPOs are not required to establish transit safety targets annually each time the transit provider establishes targets. Instead, subsequent MPO targets must be established when the MPO updates the LRTP. When establishing transit safety targets, the MPO can either agree to program projects that will support the transit provider targets or establish its own separate regional transit safety targets for the MPO planning area.

The following transit provider(s) operate in the Sarasota/Manatee MPO planning area: Manatee County Area Transit and Sarasota County Area Transit. Of these, both transit agencies are responsible for developing a PTASP and establishing transit safety performance targets annually.

**Manatee County Area Transit (MCAT) 2023 Safety Performance Targets**

Mode	Fatalities (Total)	Fatality Rate*	Major Injuries (Total)	Injury Rate* (Per 100,000 Vehicle Revenue Miles)	Safety Events (Total)	Safety Events Rate* (Per 100,000 Vehicle Revenue Miles)	System Reliability*
Fixed Route	0	0.0	0	0.00	2	0.15	10,500
Paratransit	0	0.0	0	0.00	2	0.15	3,500

**Sarasota County Area Transit 2023 Safety Targets**

Mode	Fatalities (Total)	Fatality Rate*	Injuries (Total)	Injury Rate* (Per 100,000 Vehicle Revenue Miles)	Safety Events (Total)	Safety Events Rate* (Per 100,000 Vehicle Revenue Miles)	System Reliability*
Fixed Route (MB/DO)	0	0.0	0	2	8	3.2	35,000
Paratransit (DR/PT)	0	0.0	4	4	5	3.2	40,000

On January 23, 2023, the Sarasota/Manatee MPO Board adopted the Manatee County Area Transit and Sarasota County Area Transit’s safety targets, thus agreeing to plan and program projects in the TIP that once implemented, are anticipated to make progress toward achieving the targets.

The Sarasota/Manatee MPO TIP was developed and is managed in cooperation with Manatee County Area Transit and Sarasota County Area Transit. It reflects the investment priorities established in the Transform 2045 Long Range Transportation Plan. The MPO supports MCAT and SCAT’s transit safety targets and agrees to plan and program projects in the TIP that will, once implemented, make progress toward achieving the transit provider’s targets. The TIP has been evaluated and the anticipated effect of the overall program is that, once implemented, progress will be made towards achieving the transit safety performance targets. The focus of Sarasota/Manatee MPO’s investments that address transit safety performance include:

- 2021 US 41 Transit Choices Study
- 2022 US 41 Transit Signal Priority Concept of Operations
- Resurfacing Projects
- Complete Streets Projects
- Transportation System Management & Operations (TSM&O) Projects

FTA funding, as programmed by the region’s transit providers and FDOT, is used for programs and products to improve the safety of the region’s transit systems. Transit safety is a consideration in the methodology Sarasota/Manatee MPO uses to select projects for inclusion in the TIP. The TIP includes specific investment priorities that support all the MPO’s goals, including transit safety, using a prioritization and project selection process established in the LRTP. This process evaluates projects that, once implemented, are anticipated to improve transit safety in the MPO’s planning area. The MPO’s goal of supporting local transit providers to achieve transit safety targets is linked to this investment plan, and the process used to prioritize the projects within the TIP is consistent with federal requirements.

The Sarasota/Manatee MPO TIP has been evaluated and the anticipated effect of the overall program is that, once implemented, progress will be made towards achieving the transit safety performance targets. The Sarasota/Manatee MPO will continue to coordinate with the Manatee County Area Transit and Sarasota County Area Transit to maintain and improve the safety of the region’s transit system and maintain transit assets in a state of good repair.

Tampa Bay Area Regional Transit Authority's (TBARTA) Safety Performance Targets for FY 2023: TBARTA adopted the first annual update to its Public Transportation Agency Safety Plan (PTASP) at the April 23, 2021, Board meeting. The most recently adopted PTASP Performance Targets for FY 2023 are represented in the table below.

	2018	2019	2020	2021	2022	5-Year Average	2023
Safety Performance Target Category – <b>Vanpool</b>	<b>Actual</b>	<b>Actual</b>	<b>Actual</b>	<b>Actual</b>	<b>Actual</b>		<b>Target</b>
Total Number of Fatalities	0	0	0	0	0	0	0
Fatality Rate per 100,000 VRM	0	0	0	0	0	0	0
Total Number of Injuries	0	0	1	0	1	0.40	0
Injury Rate per 100,000 VRM	0	0	0.04	0	0.03	0	0
Total Number of Safety Events	1	1	3	1	4	2.00	0

## 2.05 Project Prioritization

DESOTO BRIDGE FROM 21ST AVE W TO US 19 BRIDGE #130053 // 442630-1-21-01

The Development of the TIP begins with the development of the list of Priority Projects. The MPO's annual priority list must be based upon project selection criteria shown below, the approved MPO LRTP, the Strategic Intermodal System Plan, the Transportation Regional Incentive Program, transportation management systems, and the MPO's public involvement procedures. The TAC created a scoring system which awards points based on objective data sets in the MAP-21/FAST Act performance measure categories:

### Project Prioritization Evaluation Criteria and Scoring

<b>Safety/Security</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Total number of crashes (5 points max)	Project intersects with high crash location	5
	Project intersects medium-high crash location	3
	Project intersects with medium crash location	1
Number of non-motorized (bike/ped) crashes (5 points max)	Bicycle or pedestrian project intersects with high non-motorized crash location	5
	Bicycle or pedestrian project intersects with medium-high non-motorized crash location	3
	Bicycle or pedestrian project intersects with medium non-motorized crash location	1
Vulnerable Users (2 points)	Project provides new pedestrian crossings or bike lanes in high or medium-high non-motorized crash location (Specify in application)	2
Evacuation Route (3 points max)	Project is located on a designated evacuation route in Zones A-B	3
	Project is located on a designated evacuation route in Zones C-E	1
<b>Safety/Security Total Points</b>		<b>15</b>

<b>Infrastructure/Resiliency</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Bridge Condition (6 points max)	Project on an arterial roadway and includes rehab/replacement of bridge in poor condition	6
	Project on a collector or local roadway and includes rehab/replacement of bridge in poor condition	4
	Project on an arterial roadway and includes rehab/replacement of bridge in fair condition	1
	Project on a collector or local roadway and includes rehab/replacement of bridge in fair condition	1
Pavement Condition (5 points max)	Project includes replacement of pavement in poor condition	5
	Project includes replacement of pavement in fair condition	3
Resiliency (1 point)	Project improves resiliency in special flood hazard area (Specify in application)	1
Resiliency (3 points max)	Project improves resiliency in Storm Surge Zone Category T or 1 (Specify in application)	3
	Project improves resiliency in Storm Surge Zone Category 2 (Specify in application)	2
	Project improves resiliency in Storm Surge Zone Category 3 (Specify in application)	1
<b>Infrastructure/Resiliency Total Points</b>		<b>15</b>

<b>Mobility/Reliability and Technology/Autonomy</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Existing Congestion Levels (3 points max)	Existing V/C ratio > 1.20	3
	Existing V/C ratio between 1.05 and 1.20	2
	Existing V/C ratio between 0.75 and 1.05	1
Future Congestion Levels (1 point max)	Future V/C ratio between 0.75 and 1.05	1
	Future V/C ratio between 1.05 and 1.20	1
	Future V/C ratio > 1.20	1
Complete Street (6 points max)	Project includes construction or improvement of sidewalks or trails more than 10 feet wide (Specify in application)	3
	Project includes construction or improvement of sidewalks or trails more than 8 - 9 feet wide (Specify in application)	2
	Project includes construction or improvement of sidewalks or trails more than 5 - 7 feet wide (Specify in application)	1
	Project includes construction or improvement of bicycle facility 6 - 7 feet on street/separated facility (Specify in application)	3
	Project includes construction or improvement of bicycle facility 4 - 5 feet on street (Specify in application)	2
Alternative Transit Service (3 points max)	Project is located along a transit route	3
	Project intersects a transit route	2
	Project is within 1/4 mile of a transit route	1
Regional Network (1 point)	Project is located on the MPO's Regional Network	1
Intersection (1 point)	Project includes operational improvements (Specify in application)	1
ITS/ATMS (3 points max)	Cost feasible TSM&O Corridor	3
	TSM&O Needs Project	2
	TSM&O Candidate Project	1
Reliability (1 point)	Multi modal project located on Travel Time Reliability priority segment	1
<b>Mobility/Reliability and Technology/Autonomy Total Points</b>		<b>19</b>

<b>Economy/Tourism</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Economic Development (3 points)	Project located within established CRA, brownfield, Enterprise Zone, Port Encouragement Zone or other locally established special district	3
Freight Network (4 points max)	Project on regional Freight Mobility Corridor	4
	Project on Freight Distribution Route	2
	Project on Freight Activity Street	1
Freight Access (4 points max)	Project provides direct access to high freight activity area	4
	Project provides direct access to medium freight activity area	2
	Project provides direct access to low freight activity area	0
% of daily truck volumes (2 points max)	Project on segment with daily truck volumes 6,001 - 15,000	2
	Project on segment with daily truck volumes 3,501 - 6,000	1

Tourism (2 points)	Project is within 1/4 mile of a tourist destination	2
<b>Economy/Tourism Total Points</b>		<b>15</b>

<b>Environment/Conservation and Equity/Livability</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Environmental Mitigation (4 points)	The Project limits do not contain a critical habitat	2
	The Project limits do not require mitigation for wetland impacts	1
	The project limits do not contain endangered species	1
Transit Service (4 points)	Project improves accessibility to transit in low-income or minority communities	2
	Project addresses ADA compliance issues through retrofit at transit stops (Specify in application)	1
	Project includes transit shelters at priority stops (Specify in application)	1
Multi modal Livability (2 points max)	Project improves accessibility to affordable housing	2
	Project is located within designated infill development areas	1
Social Justice (2 points)	Multi modal project provides improved access for low-income or minority communities	2
Environmental Streamlining (1 point)	Environmental permitting not required (Specify in application)	1
Transportation Accessibility (2 points max)	Multi modal project located within gap area on 30-minute accessibility maps	2
	Multi modal project located within 1/2 mile of qualified food, medical, or education facility	1
<b>Environment/Conservation and Equity/Livability Total Points</b>		<b>15</b>

<b>Project Delivery</b>	<b>Prioritization Scoring Criteria</b>	<b>Balanced Points</b>
Current Project Status (3 points max)	Needed right-of-way for project has been acquired	3
	Project right-of-way is fully funded in FDOT Work Program	2
	Project design is fully funded in FDOT Work Program	2
	Project PD&E has been completed with preferred alternative defined	1
Project Cost Sharing (3 points max)	At least 50% of project cost is a local match	3
	25% - 50% of project cost is a local match	2
	15% - 25% of project is a local match	1
Operational Commitment (1 point)	Project includes private partner - requires special agreement	1
Local Priority (4 points max)	Project is priority #1 for submitting agency	4
	Project is priority #2 for submitting agency	3
	Project is priority #3 for submitting agency	2
Implement Feasibility Study (2 points)	Project is a recommendation of MPO or FDOT feasibility study	2
LRTP Consistency (2 points max)	Proposed project is in first 5-year time band of the Financially Feasible Plan	2
	Proposed project is listed in the Financially Feasible Plan beyond first 5-year time band	1
<b>Project Delivery Total Points</b>		<b>15</b>

Because the projects submitted for review are so diverse, the TAC also developed a methodology for weighing the performance measure categories for different types of projects. Each project application may be considered as either a community, regional, interregional, or active transportation facility. For example, a neighborhood project that improves walking and biking facilities would be an active transportation project. Widening a major facility from four to six lanes would be scored as a regional or inter-regional project.

### Project Prioritization Weighting

Planning Goal	Max Points	Community		Regional		Inter-Regional		Active Transportation	
Safety/Security	15	40%	6.00	25%	3.75	25%	3.75	40%	6.00
Infrastructure Condition	15	15%	2.25	15%	2.25	8%	1.20	5%	0.75
Mobility/Congestion/Reliability	15	6%	0.90	30%	4.50	40%	6.00	15%	2.25
Economy/Freight	15	4%	0.60	10%	1.50	15%	2.25	5%	0.75
Environment/Livability	15	25%	3.75	10%	1.50	4%	0.60	30%	4.50
Project Delivery	15	10%	1.50	10%	1.50	8%	1.20	5%	0.75
<b>TOTAL</b>	<b>90</b>	<b>100%</b>	<b>15</b>	<b>100%</b>	<b>15</b>	<b>100%</b>	<b>15</b>	<b>100%</b>	<b>15</b>

Continuing with this example, the weighted score for the active transportation project emphasizes safety/security (40%) and environment/livability (30%) while the widening of an inter-regional road is weighted to focus on mobility/congestion/reliability (40%) and safety/security (25%). The weighting provides a way to fairly evaluate a wide variety of transportation facilities, alternatives, and modes. All eligible roads in the two-county area have been assigned a designation of community, regional, or inter-regional, with the option for active transportation weighting if the project emphasis is bicycle/pedestrian/transit oriented, but each jurisdiction has the flexibility to choose how a project is to be scored.

As of March 2023, the MPO is working on updating the project prioritization process to incorporate data from the 2022 Resiliency and Vulnerability Assessment and reevaluate all other measures, such as equity.

**Project Priorities:** In Fall 2021, the MPO issued a formal Call for Projects inviting all jurisdictions within the MPO operating boundaries to submit projects for funding consideration. All projects were reviewed by the MPO staff to ensure the applications were complete with all appropriate and required documentation prior to submittal to FDOT. All prior and new projects were scored using the methodology approved by the committees and Board. The project priorities presented here were reviewed by the MPO committees and adopted by the MPO Governing Board on February 28, 2022. Project Priorities are updated annually and are based upon the requests of the MPO's jurisdictions.

**SARASOTA/MANATEE MPO 2022 PROJECT PRIORITIES**

<b>Funded</b>	These projects are in the current FDOT 5-year work program with at least one phase funded. Continuing and completing existing projects is the first priority of the MPO and supports the national goal of accelerating project delivery. These projects may be from the 2040 Long Range Transportation Plan.
<b>L RTP Bridge Priorities</b>	MPO bridge priorities are determined by both condition and jurisdiction ranking. Bridge funding and prioritization occur at the state level using a dedicated revenue source. These priorities are intended to inform and guide the state bridge improvement process.
<b>Strategic Intermodal System (SIS)</b>	Florida’s Strategic Intermodal System is a high priority network of transportation facilities important to the state’s economic competitiveness.
<b>Commerce Connectors</b>	The MPO has identified the need for two new interchanges on I-75 to serve as commerce centers that will support the community’s vision of a diversified economy. Because these projects have not been prioritized in the SIS plan, the MPO had elected to invest Other Road (OR) funds in the early project phases.
<b>Multi Modal Emphasis Corridor (MMEC)</b>	The Multi Modal Emphasis Corridor (MMEC) concept was developed during the 2035 LRTP as a means of redeveloping and revitalizing the US 41 corridor. With the 2045 plan, the MMEC program is expanded to include US 41, SR 64/Manatee Ave, SR 789/Gulf of Mexico Dr/Ringling Causeway, SR 684/Cortez Rd, 44 <sup>th</sup> Ave, SR 780/Fruitville Rd, SR 72/Stickney Pt/Clark Rd, and University Pkwy. These are the most congested roadways during the winter tourist season and the most important evacuation routes during the summer hurricane season.
<b>FDOT Partnership Program</b>	The MPO worked closely with FDOT to develop a new partnership opportunity so that FDOT, the MPO, counties, and cities have the potential to fund a significant number of local and state capacity projects that support growth and new development with a mix of local and state funding. FDOT allows up to 10% of FDOT non-SIS Other Roads (OR) funds to be used on local roads providing an additional \$118 million to support local priority projects.
<b>TRIP</b>	The purpose of this program is to provide funds to regionally significant projects throughout the planning area pursuant to s.339.155. TRIP projects require a 50% local match.
<b>Safety Priorities</b>	MAP-21 and the FAST Act legislation require MPOs to implement outcome-based planning beginning with five safety measures for a 5-year rolling average. States and MPOs are to: “Invest resources in projects to achieve individual targets that collectively will make progress toward national goals.” Projects must address safety recommendations at high crash locations.
<b>Transform Tomorrow</b>	The most flexible funding source available to the MPO and the plan is the Transportation Management Area (TMA) program, also known as SU. The MPO can allocate this particular source of funding to any types of projects, including multi modal, transit capital, or roadways. To support the economy and the diversity of the region’s counties and cities, the 2045 Long Range Transportation Plan includes a collection of local projects like complete streets and intersection improvements that say, “Welcome to our Community.”
<b>Transportation Alternatives</b>	Transportation Alternatives include on- and off-road pedestrian and bicycle facilities, infrastructure projects for improving non-driver access to public transportation, and enhanced mobility, community improvement activities, and environmental mitigation.
<b>Transportation System Management &amp; Operations (TSM&amp;O)</b>	Transportation System Management & Operations include varying types of operational improvements implemented to improve efficiency on the existing roadway network. These projects require approval at the MPO, State, and Federal level.
<b>Jurisdiction Needs</b>	The MPO accepted applications for each jurisdiction’s priorities throughout the region. These represent all types of projects and were ranked using the MPO adopted scoring criteria. Funding consideration will be determined by resource availability and project type. These projects are listed for illustrative purposes.

## 2.06 Annual Listing of Projects Obligating Federal Funds

FDOT produces an annual listing of projects using FHWA funds that have been obligated in the preceding year. This document is available to the public online through the FDOT website at [http://www.fdot.gov/workprogram/Federal/fa\\_MPO\\_ObligDet.shtm](http://www.fdot.gov/workprogram/Federal/fa_MPO_ObligDet.shtm). The annual lists of FTA funds utilized for transit projects in FY 2021/22 were developed in partnership with MCAT and SCAT and are presented here.

### Manatee County Projects Using FTA Funds

Federal Funding Code	Work Type	Project Description	Total Funds in TIP	Total FTA Funds Obligated	Total FTA Funds Disbursed	Total FTA Funds Remaining
Section 5339	Capital	Capital Assistance Municipal Bus Service	399,487	399,487	399,461	26

## 2.07 Public Involvement Process

The primary ongoing venues for public participation are the meetings of the CAC, TAC, and the Sarasota/Manatee MPO.

- Visit <https://www.mymmpo.org/get-involved/meetings> for the date and time of meetings and upcoming agendas.
- Visit the Sarasota/Manatee MPO website at [www.mymmpo.org](http://www.mymmpo.org).
- Provide feedback at Sarasota/Manatee MPO's TIP project page at <https://publicinput.com/u5505>
- Email comments and questions to [wenonah@mymmpo.org](mailto:wenonah@mymmpo.org) or call at 941-359-5772.

The MPO's Transportation Improvement Program (TIP) is a five-year plan that identifies, prioritizes, and allocates funding for transportation projects. During the development of the TIP, the MPO must, in cooperation with FDOT and any affected public transit operation, provide citizens, affected public agencies, representatives of transportation agency employees, freight shippers, providers of freight transportation services, private providers of transportation, representatives of users of public transit, and other interested parties with reasonable notice of and an opportunity to comment on the proposed program. [s.339.175(8)(e), F.S.]. These "interested parties" include:

- All persons, regardless of race, color, national origin, sex, age, disability, relation, or family status,
- Affected public agencies,

- Representatives of public transportation employees.
- Pedestrians, and
- Bicyclists.

Projects are grouped by jurisdictional responsibility and type of project and indicate the year, fund source, and funding levels for each project phase. From a policy perspective, the TIP is particularly important because it identifies all regionally significant transportation projects (including pedestrian walkways, bicycle transportation facilities, and transportation alternatives projects) within the designated metropolitan area. The deadline for TIP submittal to state and federal offices is July 15<sup>th</sup> each year, with MPO adoption occurring before that date at an MPO Board meeting.

**Annual TIP Adoption:** The public is provided with the following opportunities to review and comment on the draft TIP:

- The Draft TIP will be posted on the MPO website at [www.mympo.org](http://www.mympo.org) along with an opportunity for online submittal of comments.
- Printed copies will be made available for public review at the MPO office during regular business hours.
- Written comments may be submitted by mail or email in addition to the opportunity to submit electronic comments online through the MPO website.
- Verbal comments may be made during the public comment portion of the agenda during regularly scheduled MPO Board or committee meetings, and/or during a properly noticed MPO Board meeting where adoption of a TIP is scheduled on the agenda.
- A Public Notice announcement will be sent to all Manatee and Sarasota County branch libraries and municipal libraries for posting.

Availability of the Draft TIP for public review and comment, will be at the MPO Board meeting where the Draft TIP is scheduled to be on the agenda shall be publicly noticed as follows:

- Posted on the MPO website ([www.mympo.org](http://www.mympo.org))
- Advertised in one or more local newspapers including Spanish language papers at least 14 days in advance.
- Distributed by news release to all major newspaper and television media outlets serving the area.

Posted on the Website	April 21, 2023
Pushed out on Twitter	April 21, 2023
Sent out Press Release	April 21, 2023
Sent Notice to Libraries	April 21, 2023

When significant public comments are received on a Draft TIP, a summary, analysis, and report on the disposition of comments shall be made part of the final TIP. If the final TIP differs significantly from the one made available for public comment or raises new material issues, an additional opportunity for public comment must be made available.

Comment	Sarasota County Area Transit: "SCAT and MCAT are not part of the FDOT Group TAM Plan from 2018 or 2022; Recommend removal of reference to the FDOT Group TAM Plan as it does not apply to either transit agency in the Sarasota/Manatee MPO."
Response	Wenonah Venter: Removed language referring to the FDOT Group TAM Plan.

**TIP Administrative Modification:** An administrative modification is a minor revision to a TIP or STIP that includes minor changes to project/project phase costs, minor changes to funding sources of previously included projects, and minor changes to project/project phase initiation dates. An administrative modification does not require public review and comment, demonstrations of fiscal constraint, or a conformity determination, if applicable. [23 C.F.R. 450.104]

**TIP Amendments:** An amendment is a revision to a TIP or STIP that involves a major change to a project in a TIP or STIP, including addition or deletion of a project, or a major change in project cost; project/project phase initiation dates; or a major change in design concept or design scope (i.e., changing project termini or the number of through traffic lanes). [23 C.F.R. 450.104] An amendment requires public review and comment, demonstration of financial constraint, or a conformity determination, if applicable.

### 2.08 Certification Completion

The purpose of MPO certification is to determine the adequacy of the transportation planning process. The MPO and FDOT conduct an annual joint certification which was performed on March 8, 2023, and found the metropolitan planning process is being conducted in accordance with all applicable state requirements.

An FHWA/FTA joint certification review is conducted every four years. In accordance with federal law and regulation, a joint review and evaluation by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA) of the MPO urban planning process was held August 14 through August 16, 2017. The findings stated the metropolitan planning process is addressing the major issues facing the metropolitan area and is being conducted in accordance with all applicable Federal and State requirements. On July 22, 2021, the FHWA/FTA joint certification review was conducted. The results of the certification will be presented at the September 27, 2021, MPO Board meeting. The next FHWA/FTA joint certification review is anticipated in July 2025.

### 2.09 Congestion Management Process

The Congestion Management Process (CMP) is defined by the Federal Highway Administration (FHWA) as: *"A systematic approach, collaboratively developed and implemented throughout a metropolitan region, that provides for the **safe** and effective management and operation of new and existing transportation facilities through the use of **demand reduction, job access projects, and operational management strategies.**"*

The CMP is an essential part of the metropolitan planning process in Transportation Management Areas (TMAs) pursuant to 23 C.F.R. 450.322 and S 339.175(6)(c)(1), F.S. The CMP is developed in compliance with the most current federal requirements and is a working tool that is incorporated into the MPO project prioritization process, TIP, and LRTP. The CMP identifies significant congestion problems and, near-term, lower cost strategies for

DESOTO BRIDGE PROJECT APE MPO 03-19 BRIDGE #130033 1992030-1-2401  
multi-modal mobility management and corridor or intersection congestion mitigation. The integration of the CMP and the LRTP highlights the MPO's comprehensive, continuing, and coordinated metropolitan planning process.

The MPO updated the CMP to include the new federal requirements pursuant to MAP-21 and to address Transportation System Management and Operations (TSMO) more effectively. The performance measures incorporated into the MPO planning process included an enhanced emphasis on congestion, infrastructure condition, and safety, including focus on the number of serious injuries and fatalities per Vehicle Miles Traveled (VMT) as well as safety related to public transit. The MPO has evaluated corridors and assessed reliability to determine the least reliable segments and intersections in the region to align with federal requirements and to assist in future decision-making and target setting. The CMP was adopted by the MPO governing board on November 18, 2019 and is currently being utilized in the project selection process. The congestion/reliability data in the CMP was updated within the 2045 LRTP update using the most current data available at the time and will continue to be an essential element in project selection going forward.

## 2.10 Transportation Disadvantaged Services

Each county in the state has a Transportation Disadvantaged program to provide transportation to those who, because of physical or mental disability, income status, or age, are unable to transport themselves or to purchase transportation and are, therefore, dependent upon others to obtain access to health care, employment, education, shopping, social activities, or other life-sustaining activities, or children who are handicapped or high-risk. The MPO serves as the Designated Official Planning Agency for both Sarasota and Manatee Counties pursuant to s. 427.015(1) F.S. and 41-2.009(2), F.A.C.

The Sarasota/Manatee area provides this transportation service through Manatee County Area Transit (MCAT) and Sarasota County Area Transit (SCAT). Each county has a Local Transportation Coordinating Board (LCB) to oversee the transit agency providing the service to the transportation disadvantaged population. This board is comprised of a cross-section of users or user representatives including, but not limited to, state social service agencies, local agencies, users of the system, elderly citizens, and school board representatives. Every year these boards approve the Transportation Disadvantaged Service Plan (TDSP) which consists of a minor update annually and a major update every five years. For more detailed information, go to [www.fdot.gov/ctd](http://www.fdot.gov/ctd).

Manatee County Government and Sarasota County Government either purchase, subsidize, or directly provide special transportation to eligible residents. The Board of County Commissioners, in its role as the Community Transportation Coordinator (CTC) for Manatee and Sarasota Counties, respectively, serves the needs of transportation disadvantaged persons. The County Commissions have designated Manatee County Area Transit and Sarasota County Area Transit, respectively, as the responsible agencies for administering all contracts for paratransit services and the management of the CTC program. The Transit Departments are empowered to act for the County Commissions in these matters. The Commission for the Transportation Disadvantaged (CTD) Trust Fund subsidizes a portion of the transportation cost for those who are transportation disadvantaged, for trips which are not sponsored by an agency, and only with a cash or in-kind match. These non-sponsored transportation funds are for "...persons who because of physical or mental disability, income status, or age are unable to transport themselves or to purchase transportation..." and includes children at-risk as defined by FS 411.202.

The Counties also provide paratransit services in compliance with the Americans with ADA of 1990. ADA/paratransit determination is based on a functional disability that prevents an individual from accessing and/or navigating public transit. The ADA requires the Transit Departments (MCAT and

DESCO BRIDGE FROM 2181 AVE W TO US 9 BRIDGE #130033744263012101  
SCAT) to offer services at a reduced price to persons with disabilities who are unable to use the fixed-route bus system. The ADA paratransit service offers a level of service comparable to that provided to persons without disabilities who use the fixed-route system.

The LCB provides information, advice, and direction to the CTC on the coordination of TD services and development of service standards that are consistent with the needs and resources of the community.

A copy of the TDSP for Manatee County can be found at <https://www.ridemcat.org/documents/transit-development-plan>

A copy of the TDSP for Sarasota County can be found at <https://www.scgov.net/government/scat-bus-service/transit-planning-regulatory-compliance>

### 3.00 Project Listings for Five Fiscal Years

This section identifies transportation improvement projects that must be consistent with the MPO 2045 LRTP pursuant to Federal regulations and consistent with the state of Florida TIP requirements. This includes a complete list of all TIP projects by county with phases to be initiated within the next five years.

#### Sarasota/Manatee 2020/2021 – 2024/2025 Transportation Improvement Program/LRTP Consistency Comments

433592 1	US 41 FROM 69TH AVE (BAY DRIVE) TO CORTEZ ROAD	FY 17/18 \$768,904 TALU	(5/31/18) - 2040 LRTP states that TALU funds are not to be spent on US 41/MMEC. We recognize that this is a past expenditure, but we are noting it here for future reference.  (12/3/18) – Issue Resolved; TALU funds no longer on project.
		FY 20/21 \$4,310,849 SU	(5/31/18) -2040 LRTP states that maximum allowable on US 41/MMEC project is \$3M. Since \$4.34M total of MPO funds are now on this project, it is requested that SU on the remainder of this project be reduced by \$1.34M.  (12/3/18) – SU has increased to \$5,301,362. The MPO plans to work with FDOT to reduce SU funding in order to align with the LRTP funding requirements.  (4/7/20) – SU project total is \$4,564,362. There has been a slight reduction in SU, but MPO will continue to work with FDOT in order to align with LRTP funding requirements. TALU project total is \$1,434,208. TALU funds have been placed back on the project and was previously noted by the MPO that these funds were not to be used on US41/MMEC per the 2040 LRTP.  (4/12/21) – SU project total has been reduced to \$222,474. This is below the maximum SU allowed on a MMEC project. TALU project total is \$1,455,628. This project is funded in the current year and barring any further changes to funding allocations this project will no longer be considered an issue.
		FY 21/22 ACSU \$2,500,000	(5/11/22) – Advanced Construction SU Funds allocated to resolve Manatee County utilities overages. The ACSU total is \$2,500,000 and with LF and SU funds, the project is programmed for construction in FY 2023.
433225 2	SR 64 (US 41) FROM RINGLING BLVD TO MAIN STREET	FY 21/22	(5/11/22) Preliminary engineering for the two roundabouts is not currently programmed. Future funding is still to be determined. The MPO will continue coordinating with FDOT and the City of Sarasota.

433276 1	SR 64 (US 41) FROM MYRTLE ST TO DR MARTIN LUTHER KING WAY	FY 21/22	(5/11/22) City of Sarasota received FDOT documentation with a production date of 2026 for the two roundabouts. MPO correspondence with FDOT on 4/11/22 indicated that FDOT is unaware of the documented production date on the two roundabouts. The project is not listed in the tentative work program. The MPO will continuing coordinating with FDOT and City of Sarasota.
----------	---	----------	---

**MATERIAL PROVIDED BY THE FLORIDA DEPARTMENT OF TRANSPORTATION**

This section of the TIP is provided by the FDOT. It incorporates all major bridge, highway, rail, public transportation, and intersection improvement projects currently programmed for accomplishment with State and/or Federal funds. Specifically included are projects on the State Highway System, projects on roads that are not on the State Highway System, Interstate Highway projects and public transportation projects. The primary purpose of this section is to provide an indication of area priorities and the schedule of non-locally funded improvements within Sarasota and Manatee Counties.

The “Total Project Cost” amount displayed for each of the federal and state funded projects in the TIP represents 10 years of programming in the Florida Department of Transportation’s (FDOT’s) Work Program database for projects on the Strategic Intermodal System (SIS) (FYs 2018 through 2026), and 5 years of programming in the FDOT Work Program for non-SIS projects (FYs 2021 through 2025), plus historical cost information for all projects having expenditures paid by FDOT prior to FY 2021. For a more comprehensive view of a particular project’s anticipated total project cost for all phases of the project, please refer to the MPO Long Range Transportation Plan (LRTP).

**TIP Project Listings Definition Page**

<b>Item #</b>	is a 7-digit Work Program Financial Management number assigned by the Florida Department of Transportation (FDOT).
<b>LRTP #</b>	is the section and page number the project is found in the MPO's Long Range Transportation Plan.
<b>Roadway &amp; Project Limits</b>	describes the project roadway and the beginning and ending locations of the project.
<b>Project Length</b>	is the length of the work area in miles.
<b>Type of Work</b>	is the type of work being performed on the roadway.
<b>Responsible Agency</b>	is the agency responsible for managing the project.
<b>Prior Years Cost</b>	is the historical cost information for projects having expenditures paid by FDOT prior to FY 2018/19.
<b>Future Years Cost</b>	is five years of programming in the FDOT Work Program for Non-SIS; 10 years of programmed costs for Strategic Intermodal Systems Projects (SIS).
<b>Total Project Costs</b>	represents 10 years of programming in the FDOT Work Program for projects on the Strategic Intermodal System (SIS) (FY 2019 through 2028), and 5 years of programming in the FDOT Work Program for Non-SIS projects (FY 2019 through 2023), plus historical cost information for all projects having expenditures paid by FDOT prior to FY 2019.
<b>Phase</b>	is the primary phase of the project; e.g., Project Development and Environment (PD&E), Design (PE), Right of Way (ROW) and a Construction (CST) phase.
<b>Fund Source</b>	describes the funding source for Federal, State, or Local funds.
<b>Funding</b>	is the amount programmed in the FDOT Work Program by Fiscal Year in thousands of dollars inflated to the year that the funds are expended based on reasonable inflation factors.

## APPENDIX A

### Capital Improvement Programs

#### City of Bradenton Documents

The above link will take you to the City of Bradenton's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Kim Clayback with the City of Bradenton at [kim.clayback@bradentonfl.gov](mailto:kim.clayback@bradentonfl.gov).

#### City of North Port Documents

The above link will take you to the City of North Port's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Anthony Friedman with the City of North Port at [afriedman@cityofnorthport.com](mailto:afriedman@cityofnorthport.com).

#### City of Palmetto Documents

The above link will take you to the City of Palmetto's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Kera Hill with the City of Palmetto at [khill@palmettofl.org](mailto:khill@palmettofl.org).

#### City of Sarasota Documents

The above link will take you to the City of Sarasota's Capital Improvement Program. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Alvimarie Corales with the City of Sarasota at [alvimarie.corales@sarasotafl.gov](mailto:alvimarie.corales@sarasotafl.gov).

#### City of Venice Documents

The above link will take you to the City of Venice's Capital Improvement Program. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Kathleen Weeden with the City of Venice at [kweeden@venicefl.gov](mailto:kweeden@venicefl.gov).

### [Manatee County Documents](#)

The above link will take you to Manatee Counties Capital Improvement Program. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org) or Clarke Davis with Manatee County at [clarke.davis@mymanatee.org](mailto:clarke.davis@mymanatee.org).

### [Seaport Manatee Documents](#)

The above link will take you to Seaport Manatee's Capital Improvement Program. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org) or Dan Fitz-Patrick with Seaport Manatee at [dfitzpatrick@seaportmanatee.com](mailto:dfitzpatrick@seaportmanatee.com).

### [Sarasota Bradenton International Airport Documents](#)

The above link will take you to the Sarasota Bradenton International Airport's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org) or Kent Bontrager with Sarasota Bradenton International Airport [Bontrager@srq-airport.com](mailto:Bontrager@srq-airport.com).

### [Sarasota County Documents](#)

The above link will take you to the Sarasota Counties website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org) or Paula Wiggins with Sarasota County [pwiggins@scgov.net](mailto:pwiggins@scgov.net).

### [City of Anna Maria Beach Documents](#)

The above link will take you to the City of Anna Maria's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org).

### [City of Bradenton Beach Documents](#)

The above link will take you to the City of Bradenton Beach's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mymppo.org](mailto:ryan@mymppo.org).

### City of Holmes Beach Documents

The above link will take you to the City of Holmes Beach's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org) or Sage Kamiya with the City of Holmes Beach at [skamiya@holmesbeachfl.org](mailto:skamiya@holmesbeachfl.org).

### Town of Longboat Key Documents

The above link will take you to the Town of Longboat Key's website. Should you have any questions regarding the Capital Improvement Program, you could contact Ryan Brown with the MPO at [ryan@mympo.org](mailto:ryan@mympo.org).

Institutional / 20.58 / 3.77%

Right-of-Way / 4.41 / 0.81%

**COMMENTS ON EFFECTS TO RESOURCES:**

The DeSoto Bridge is one of two crossings of the Manatee River between the cities of Bradenton and Palmetto, and is integral to the regional movement of commuter, tourist, and freight traffic. Located within the Sarasota-Bradenton Urbanized Area, the bridge connects the Cities of Bradenton and Palmetto [both are U.S. Census Designated Places] across the Manatee River in Manatee County. Land uses within the 1,320-foot project buffer consist primarily of public/semi-

public, residential, and retail/office with smaller acreages of vacant nonresidential, mining, and institutional.

Community features located within the 1,320-foot buffer include two Developments of Regional Impact [Riviera Dunes Resorts (ADA No: 1999-012) (Approved with Conditions) and Riverfront Carrousel (ADA No: 1988-007) (ADA Withdrawn)], three homeowner and condominium associations [Bel Mare Condominium Associates, Riviera Dunes, and Riverwalk], one civic center [Bradenton Area Convention Center], one hospital [Manatee Memorial Hospital], one aviation transportation facility [Manatee Memorial Hospital Helistop], 25 healthcare facilities, one fire station [Manatee County Rescue Station 16], one marina [Riviera Dunes Marina], three religious centers [Church of God of Palmetto, Emmanuel Missionary Baptist Church, and Greater Mountain Pilgrim Church], one historic cemetery [Major Adams Cemetery], one existing recreational trail [Manatee River Trail] - part of the Office of Greenways and Trails paddling trail opportunity [Paddle Manatee Trails Corridor], three local park and recreational facilities [Veterans Memorial Park, Bradenton Waterfront Park, and Palmetto Estuary Preservation Project (also a Florida Managed Area) - the latter two parks are also National Park Projects], and cultural resources.

### DEMOGRAPHICS:

The tables below present the demographic data for U.S. Census Block Groups clipped by the 1,320-foot project buffer and Manatee County. The data is derived from the 2020 American Community Survey five-year estimates.

#### Race, Ethnicity, and Age / 1,320-Foot Project Buffer / Manatee County

White (Race) / 73.74% / 83.09%  
 Black or African-American (Race) / 17.57% / 8.49%  
 Other (Race)\* / 8.72% / 8.42%  
 Hispanic (Ethnic Group) / 19.10% / 16.41%  
 Minority Populations / 42.34% / 29.09%  
 Age 65 and Over / 27.89% / 27.54%  
 Under Age 18 / 15.76% / 18.27%

\* Other includes Asian, American Indian, Native Hawaiian & Other Pacific Islander Alone, Some Other Race, & Two or More Races.

Compared to the demographic characteristics for Manatee County, the 1,320-foot project buffer contains a notably lower White population percentage [9.35% less] and a notably higher minority population percentage [13.25% more], including a much higher Black or African American population percentage [9.08% more] and higher Hispanic population percentage [2.69% more]. Out of the seven U.S. Census Blocks composing the 500-foot project buffer, four contain a minority population greater than 40% with a total population of 6,255 individuals. It should be noted that the southern and northern bridge approaches are located within higher scoring Environmental Justice Focus Areas, as designated by the Sarasota Manatee Metropolitan Planning Organization (MPO), indicating high concentrations of historically underserved, overburdened, and disadvantaged populations as consistent with the identified notably higher minority and low-income population percentages in the area. The 1,320-foot project buffer area also includes a slightly higher percentage of individuals age 65 and over [0.35% more], and a lower percentage of individuals under the age of 18 [2.51% less].

#### Income and Housing / 1,320-Foot Project Buffer / Manatee County

Median Family Income / \$45,854 / \$73,429  
 Population below Poverty Level / 20.92% / 10.96%  
 Households below Poverty Level / 11.68% / 9.67%  
 Households with Public Assistance Income / 1.59% / 2.01%  
 Owner-Occupied Units / 29.81% / 56.93%  
 Renter-Occupied Units / 33.75% / 20.19%  
 Median Housing Value / \$107,450 / \$250,700  
 Occupied Housing Units with No Vehicle / 4.77% / 4.14%

The median family income for the U.S. Census Block Groups composing the buffer area is \$45,854; this is drastically lower [\$27,575 less] than the median family income for Manatee County as a whole [\$73,429]. Compared to Manatee County, the 1,320-foot project buffer contains higher percentages of population below poverty level [9.96% more] and households below poverty level [2.01% higher]. The median housing value for the project buffer area is \$143,250 less than that of Manatee County. In addition, the percentage of owner-occupied units is drastically lower [27.12% less] while the percentage of renter-occupied units is notably higher [13.56% more]. The number of occupied housing units with no vehicle available within the 1,320-foot project buffer is slightly higher than that for Manatee County [0.63% more].

### **Education and Language / 1,320-Foot Project Buffer / Manatee County**

Less Than 9th Grade / 4.03% / 3.75%  
 High School Graduate or Higher / 88.39% / 89.42%  
 Bachelor's Degree or Higher / 34.08% / 30.20%  
 Speaks English Less than Very Well / 9.73% / 6.53%

Regarding educational attainment, while the 1,320-foot project buffer contains a higher percentage of individuals with less than a 9th grade education [0.28% more] and a lower percentage of those that graduated high school or higher [1.03% less] compared to Manatee County, the buffer area also contains a higher percentage of those that hold a bachelor's degree or higher compared to Manatee County [3.88% more].

Limited English Proficiency (LEP) accommodations should be considered during public involvement efforts of the Project Development phase as 9.73% of the population [742 persons] within the U.S. Census Block Groups containing the project corridor "speak English less than very well" compared to 6.53% of Manatee County's population.

### **COMMUNITY COHESION:**

Community cohesion is the degree to which residents have a sense of belonging to their neighborhood or community, including commitment to the community or level of attachment to neighbors, institutions in the community, or groups. Community cohesion includes the degree of networking in a community and the degree to which residents cooperate and interact. No further social isolation or neighborhood division is expected as a result of this project. Access to proximate residences, businesses, and community features could temporarily be affected and/or modified as a result of project construction. No major changes to traffic patterns within surrounding neighborhoods are expected. Interaction among proximate residents and businesses is anticipated to increase with the potential provision of bicycle and pedestrian facilities across the bridge.

### **SAFETY:**

*Incident Management* – The existing DeSoto Bridge does not meet current FDOT design standards as it lacks both inside and outside shoulders as well as bicycle and pedestrian facilities. The lack of inside and outside shoulders on the bridge restricts the ability of drivers to avoid hazards or react to changing driving conditions within the directional travel lanes without causing direct impacts. In addition, due to the current configuration of the bridge, there is limited space for an emergency service vehicle to pass to respond to a situation during periods of congestion or to accommodate a maintenance vehicle or disabled vehicle to prevent it from obstructing traffic flow.

*Evacuation* – SR 55/US 41/US 301 is part of the emergency evacuation route network designated by the Florida Division of Emergency Management as well as the network established by Manatee County. Since DeSoto Bridge carries SR 55/US 41/US 301 across the Manatee River and serves as one of three crossings over the Manatee River on Florida's west coast, the DeSoto Bridge is critical in facilitating traffic during emergency evacuation periods. SR 55/US 41/US 301 also connects to other major arterials and highways of the state evacuation route network such as US 19 to the north and I-75 to the west.

The project is anticipated to address the systemic deterioration of the existing bridge structure as well as the design deficiencies of the bridge, maintaining a critical connection for local and regional traffic on Florida's west coast. In addition, the provision of sidewalks and/or bicycle facilities on the bridge will allow for the safe movement of pedestrians and bicyclists across the bridge. The project is not anticipated to create new isolated areas or affect safe access to proximate community facilities.

#### **COMMUNITY GOALS/QUALITY OF LIFE:**

Transform 2045 (the Sarasota/Manatee Metropolitan Planning Organization's (MPO) Long Range Transportation Plan (LRTP)) identifies the safe and convenient crossing of the Manatee River as a major transportation concern. The plan notes that improvements to the river crossings are critical in maintaining access between the region and Tampa Bay. Transform 2045 lists US 301 and US 41 as two of the primary surface transportation routes used to transport goods to and through the region, underscoring the importance of the project link to the local and regional economies and associated transportation network. Further, DeSoto Bridge is noted as the facility with the highest 2018 AADT within Table 3-1: 2018 Regionally Significant Bridges Rated Fair and identified as the #1 Regional Bridge Priority (in Table 3-2) of Transform 2045, representing an important transportation asset with upcoming rehabilitation or replacement needs.

Increasing multimodal connectivity and access is a major priority of the local governments in the area. Policy 2.6.2 of the City of Palmetto Comprehensive Plan states that "where feasible, the city shall incorporate multimodal design standards into all new and reconstructed thoroughfare streets." Policy 5.0.2.2 of the Manatee County Comprehensive Plan notes to "encourage transportation improvements for bicycle and pedestrian movement that will result in development of bicycle and pedestrian networks coordinated with transportation and transit improvements," and Policy 5.4.1.3 states "require, where feasible, the inclusion of bicycle facilities as per FDOT Design Manual 223." The provision of bicycle and pedestrian facilities on the new bridge structure would improve local mobility and work towards attaining local planning goals. In addition, the improved operational conditions of the roadways would benefit users of the two Manatee County Area Transit routes. The project is consistent with the vision of the Comprehensive Plans for Manatee County and the City of Palmetto as it is anticipated to expand transportation accessibility and bicycle and pedestrian movements.

The current and projected increase in population growth, the concentrated efforts by both cities to invest in and revitalize their respective older central cores [via a designated Opportunity Zone in the City of Bradenton and a Community Redevelopment Area in the City of Palmetto], and the appeal of destinations within the area to tourists [i.e. Bradenton Area Convention Center and waterfront recreational features] have attracted traffic/generated activity in the area and have created a latent demand for increased bicycle and pedestrian activity. The proposed replacement bridge is anticipated to maintain and enhance multimodal connectivity and access across the Manatee River, helping to address and attain local planning goals.

#### **SPECIAL COMMUNITY DESIGNATIONS:**

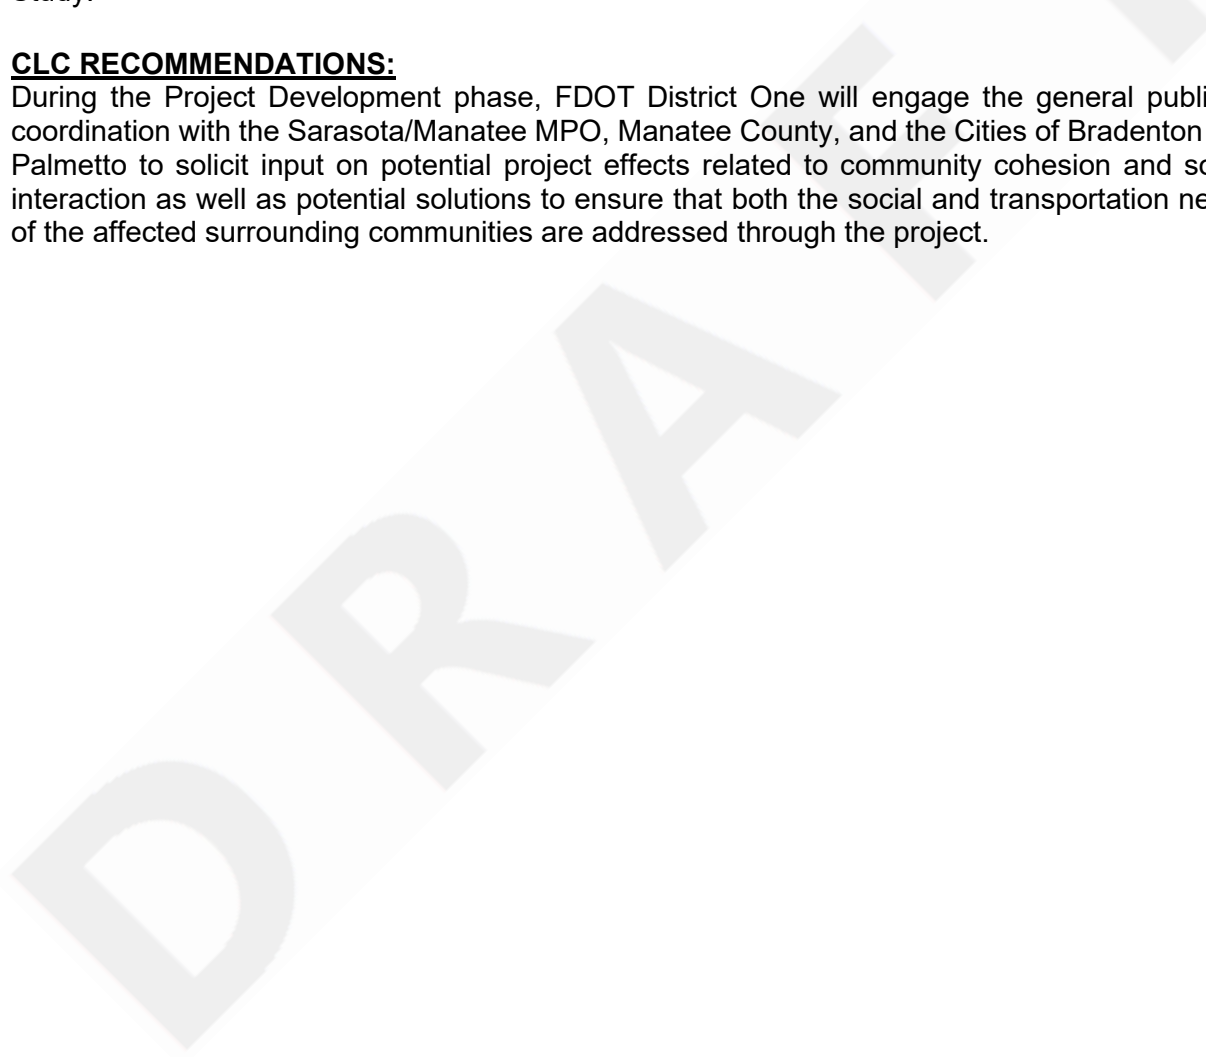

The bridge connects communities within both cities that are designated as part of the Front Porch Florida Initiative [communities that are usually diverse and with a history of involvement in community-based efforts that are eligible for and receive priority consideration for special community revitalization funds and grants from state, federal, and other sources]. In addition, the southern portion of the project corridor is adjacent to a Florida Opportunity Zone [the federal Opportunity Zone Program aims to foster economic development and job creation in economically distressed communities]. Likewise, the northern portion of the project corridor occurs within one brownfield area [Palmetto Economic Enhancement District], which is now the defined City of Palmetto Community Redevelopment Area that has been established to encourage investment and revitalization within the older city central core.

**CONCLUDING STATEMENT:**

Overall, the proposed bridge replacement is anticipated to enhance the social fabric and cohesion of the communities in which it connects by addressing the structural degradation and substandard design elements of the current bridge, thereby maintaining both a critical regional link to area jobs, tourist destinations, and distribution centers for commuters, visitors, and freight providers and a vital connection to essential services north and south of the river for area residents. The replacement bridge is also intended to accommodate multimodal activity within the area by addressing gaps in the bicycle and pedestrian network/enhancing alternative transportation options across the Manatee River. While no further neighborhood division or social isolation is expected to occur as the proposed bridge replacement is to be in-kind, minimal impacts on the social environment are anticipated due to the fact that access to proximate businesses, residences, and community features along the project corridor could temporarily be affected and/or modified as a result of project construction. Both a Sociocultural Effects Evaluation and a Public Involvement Plan will be included as part of the Project Development and Environment Study.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage the general public in coordination with the Sarasota/Manatee MPO, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential project effects related to community cohesion and social interaction as well as potential solutions to ensure that both the social and transportation needs of the affected surrounding communities are addressed through the project.

- Right-Of-Way / 4.41 / 0.81%

**COMMENTS ON EFFECTS TO RESOURCES:**

The DeSoto Bridge carries US 301/US 41/SR 55 across the Manatee River, connecting the Cities of Bradenton and Palmetto within Manatee County. Serving as one of three crossings over the Manatee River on Florida's west coast, it is critical in facilitating significant commuter, visitor, and freight traffic at the regional and local levels as it connects to other major arterials and highways (such as I-275, a Florida Strategic Intermodal System facility) and provides access to area jobs, essential services, tourist destinations, and freight distribution centers.

The bridge also connects communities within both cities that are designated as part of the Front Porch Florida Initiative [communities that are usually diverse and with a history of involvement in community-based efforts that are eligible for and receive priority consideration for special community revitalization funds and grants from state, federal, and other sources]. In addition, the southern portion of the project corridor is adjacent to a Florida Opportunity Zone [the federal Opportunity Zone Program aims to foster economic development and job creation in economically distressed communities]. Likewise, the northern portion of the project corridor occurs within one brownfield area [Palmetto Economic Enhancement District], which is now the defined City of Palmetto Community Redevelopment Area. This area was established to encourage investment and revitalization within the older city central core. One mixed use Development of Regional Impact [Riverfront Carrousel (ADA No: 1988-007) (ADA Withdrawn)] is located southwest of the bridge within the 1,320-foot project buffer.

Land uses within the 1,320-foot project buffer consist primarily of public/semi-public, residential, and retail/office with smaller acreages of vacant nonresidential, mining, and institutional.

**BUSINESS AND EMPLOYMENT:**

Based on figures produced by the U.S. Census Bureau reported in the 2019 Longitudinal Employer-Household Dynamics database, the 1,320-foot project buffer currently supports 11,295 jobs. According to the North American Industry Classification System (NAICS), as indicated through the table below, the job market is mainly composed of the educational services and health care and social assistance sectors.

**NAICS Industry Sector 2019 / 1,320-Footer Buffer / Count / Share**

Educational Services / 7,209 / 63.8%  
 Health Care and Social Assistance / 3,205 / 28.4%  
 Accommodation and Food Services / 254 / 2.2%  
 Management of Companies and Enterprises / 241 / 2.1%

The DeSoto Bridge project corridor also supports an assortment of accommodation and food services [Mattison's Riverwalk Grille, Starbucks, KFC, and other businesses]. The project corridor specifically supports many hotels, restaurants, waterfront recreational features, as well as the Bradenton Area Convention Center, which attract tourists and employers to the area. Major area employers include the Bradenton Area Convention Center, Manatee Memorial Hospital, and Manatee County Schools.

**TAX BASE:**

Given that the project entails the in-kind replacement of an existing bridge, negligible tax base impacts are expected as a result of this project. It is not anticipated that the project will significantly reduce or increase property values in the study area in the near term. However, by bringing the bridge up to standards (through the provision of paved shoulders and bicycle and pedestrian facilities), the project is intended to enhance the physical use and aesthetic appeal of the bridge itself and overall corridor. This, in turn, may make the area more appealing to businesses and lead to increased business activity/investment and have long term positive effects on the community's economic well-being and property values.

**TRAFFIC PATTERNS:**

There may be temporary modifications to the existing traffic patterns during bridge construction. The shifts in traffic will be focused on the bridge and bridge approaches.

**BUSINESS ACCESS:**

Access to and visibility of proximate businesses/properties may temporarily be affected and/or modified as a result of the project given the presence of private driveway connections along the project corridor. However, the potential provision of bicycle and pedestrian facilities across the bridge could improve multimodal access to the corridor businesses. Specific access management strategies will be explored and determined during the Project Development and Environment (PD&E) Study.

**SPECIAL NEEDS PATRONS:**

The project is expected to enhance the connection to employment opportunities and essential services for transportation disadvantaged populations within the area [including individuals that are low-income, under/just at driving age or otherwise unable to drive, and housing units with no vehicle available] by bringing the existing bridge up to current standards through the provision of bicycle and pedestrian facilities and paved shoulders. These improvements, in turn, will help to address gaps in the bicycle and pedestrian network (including connections to transit service) across the Manatee River; the paved shoulders may also be used/converted in the future for potential transit service. The paved shoulders are additionally anticipated to accommodate trucks/provide an element of safety for this mode, especially given the speed differential when trucks access the approach of a bridge and travel uphill. Based on 2021 Florida Traffic Online data, truck traffic along the project corridor is 7.3%.

**CONCLUDING STATEMENT:**

Overall, in the long term, the proposed bridge replacement is expected to enhance economic conditions of the area by maintaining and enhancing this vital regional link for commuters, visitors, and freight providers as one of three crossings over the Manatee River on Florida's west coast providing access to area jobs, essential services, tourist attractions, and distribution centers. The provision of bicycle and pedestrian facilities on the new bridge are also anticipated to enhance multimodal connectivity and access across the river to area destinations. However, minimal economic impacts are anticipated as access to local businesses along the corridor may be modified or temporarily affected as a result of project construction; no businesses are expected to be relocated. A Sociocultural Effects Evaluation will be included as part of the Project Development and Environment Study.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage the general public and business community in coordination with the Sarasota/Manatee Metropolitan Planning Organization, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential economic enhancements/impacts as a result of the project as well as potential solutions.

**COMMENTS ON EFFECTS TO RESOURCES:**

The DeSoto Bridge is located within the designated Sarasota-Bradenton Urbanized Area and connects the Cities of Bradenton and Palmetto [both are U.S. Census Designated Places] across the Manatee River in Manatee County. The bridge also connects communities within both cities that are designated as part of the Front Porch Florida Initiative [communities that are usually diverse and with a history of involvement in community-based efforts that are eligible for and receive priority consideration for special community revitalization funds and grants from state, federal, and other sources]. In addition, the southern portion of the project corridor is adjacent to a Florida Opportunity Zone [the federal Opportunity Zone Program aims to foster economic development and job creation in economically distressed communities]. Likewise, the northern portion of the project corridor occurs within one brownfield area [Palmetto Economic

Enhancement District], which is now the defined City of Palmetto Community Redevelopment Area. This area was established to encourage investment and revitalization within the older city central core. As identified within the 1,320-foot project buffer, the corridor also supports two Developments of Regional Impact – one north of the bridge [Riviera Dunes Resorts (ADA No: 1999-012) (Approved with Conditions)] and one south of the bridge [Riverfront Carrousel (ADA No: 1988-007) (ADA Withdrawn)].

#### **LAND USE – URBAN FORM:**

Within the project area, US 301/US 41/SR 55 is classified as 'Urban Principal Arterial - Other' with a Current Context Classification of C3R-Suburban Residential; the roadway's Future Context Classification ranges from C3C-Suburban Commercial to C4-Urban General, indicating a transition of the road from primarily auto-centric to more multimodal. Based on generalized existing land use data (presented by zoning description), the 1,320-foot project buffer primarily consists of a mix of public/semi-public (13.94%), residential (11.12%), and retail/office (10.99%) with smaller acreages/percentages of vacant nonresidential (7.29%), mining (6.57%), and institutional (3.77%). The project corridor specifically supports many hotels, restaurants, and recreational features [such as Veterans Memorial Park, Bradenton Waterfront Park, and Palmetto Estuary Preservation Project].

According to the Future Land Use Maps of the Cities of Palmetto and Bradenton, the project area will continue to support urban mixed-use development and recreational uses. The project is anticipated to maintain a critical existing link in the regional transportation network, accommodating existing and proposed development within the area.

#### **PLAN CONSISTENCY:**

The project appears under two FM numbers in the Florida Department of Transportation (FDOT) 2023-2027 Work Program and current FDOT State Transportation Improvement Program (STIP) with \$3,070,000 programmed for the Project Development and Environment (PD&E) Study in Fiscal Year (FY) 2023 under Financial Project Identification (FPID) 442630-1, and \$175,112,737 allocated for both Preliminary Engineering (\$6,550,000) in FY 2025 and Design Build (\$168,562,737) in FY 2027 under FPID 442630-2. The project is also included in the FYs 2022/23-2026/27 Sarasota/Manatee Metropolitan Planning Organization (MPO) Transportation Improvement Program (TIP). The project limits within all three plans extend from 21st Avenue West to US 19 Bridge #130053. The project is not identified within the Sarasota/Manatee MPO's Transform 2045, the 2045 Long Range Transportation Plan. The noted plans will need to be modified to reflect the correct project limits and consistent funding amounts.

#### **GROWTH TRENDS AND ISSUES:**

The project area saw a slight decline in population between 2000 and 2010 (this could be attributed to different reporting methods), but recent ACS information points to an upward growth trend. Estimates prepared by the Bureau of Economic and Business Research (BEBR) at the University of Florida reveal that the population of Manatee County is anticipated to increase by almost 200,000 residents in the next 30 years, growing from 411,209 in 2021 to 578,500 by 2050 [an increase of 40.68%], with development occurring around the northern and southern ends of the bridge. In addition, Sarasota and Manatee Counties are expected to reach a regional population of over 1.1 million by 2050. Over the last several years, there has been significant development along the corridor including multiple condo and apartment units constructed/platted/approved, and expansions to the existing Manatee Memorial Hospital.

#### **FOCAL POINTS:**

Based on a preliminary evaluation, access to community focal points (such as the Bradenton Area Convention Center, the Manatee Memorial Hospital, the Manatee County School Board Administration Complex, etc.) could temporarily be affected and/or modified as a result of project construction. No other negative impacts to community focal points are expected.

**CONCLUDING STATEMENT:**

Overall, the project is anticipated to maintain a critical existing link in the regional transportation network, accommodating existing and proposed development within the area. For these reasons, minimal impacts or changes to proximate land uses are anticipated. A Sociocultural Effects Evaluation will be included as part of the Project Development and Environment Study.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage the general public in coordination with the Sarasota/Manatee MPO, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential project effects to surrounding communities and work to identify potential solutions. FDOT District One will also coordinate with the Sarasota/Manatee MPO to ensure that funding for the project as well as the project limits are consistent across the identified plans.

**COMMENTS ON EFFECTS TO RESOURCES:**

The DeSoto Bridge carries US 301/US 41/SR 55 across the Manatee River, connecting the Cities of Bradenton and Palmetto within Manatee County. Serving as one of three crossings over the Manatee River on Florida's west coast, it is critical in facilitating significant commuter, visitor, and freight traffic at the regional and local levels as it connects to other major arterials and highways (such as I-275, a Florida Strategic Intermodal System facility) and provides access to area jobs, essential services, tourist destinations, and freight distribution centers. US 301/US 41/SR 55 is also a designated emergency evacuation route of both the county and state.

The project corridor crosses a navigable waterway [the Manatee River] and one existing recreational trail [Manatee River Trail] - part of the Office of Greenways and Trails (OGT) paddling

trail opportunity [Paddle Manatee Trails Corridor]. The 1,320-foot project buffer identifies additional mobility features including one aviation transportation facility [Manatee Memorial Hospital Helistop], one marina associated with Riviera Dunes, and one OGT multi-use trail opportunity [Mid County Trail Corridor] located north of the bridge.

#### **MODAL CHOICES:**

Currently, no pedestrian or bicycle facilities are present on the DeSoto Bridge. The closest crossing of the Manatee River with bicycle or pedestrian facilities is the Green Bridge (US 41 Business/8th Avenue West) a half a mile to the west. Increasing bicycle and pedestrian connectivity is a major goal of local governments. Policy 2.6.2 of the City of Palmetto Comprehensive Plan states that “where feasible, the city shall incorporate multimodal design standards into all new and reconstructed thoroughfare streets.” Policy 5.0.2.2 of the Manatee County Comprehensive Plan notes to “encourage transportation improvements for bicycle and pedestrian movement that will result in development of bicycle and pedestrian networks coordinated with transportation and transit improvements,” and Policy 5.4.1.3 states “require, where feasible, the inclusion of bicycle facilities as per FDOT Design Manual 223.” Although no transit service operates north-south on the project corridor, three routes operated by Manatee County Area Transit (MCAT) traverse the 1,320-foot project buffer north and south of the bridge. The provision of bicycle and pedestrian facilities on a potential new bridge structure would improve local mobility (providing alternative transportation options and connections to transit service) and work towards attaining local planning goals.

#### **TRANSPORTATION DISADVANTAGED:**

An extensive transit dependent population [consisting of individuals that are low-income, under/just at driving age or otherwise unable to drive, and housing units with no vehicle available] is present at the bridge approaches; this population has a higher propensity to walk, bike, or take transit to access essential services. By bringing the existing bridge up to current standards (providing bicycle and pedestrian facilities and paved shoulders), the project is expected to benefit transportation disadvantaged populations by addressing gaps in the bicycle and pedestrian network (including connections to transit service); the paved shoulders may also be used/converted in the future for potential transit service. These improvement are anticipated to enhance mobility options which, in turn, can improve access to employment opportunities and essential services.

#### **CONNECTIVITY:**

US 301/US 41/SR 55 connects to other major arterials and highways (such as US 19 and I-275, a Florida Strategic Intermodal System facility) of the regional roadway network. Transform 2045 (the Sarasota/Manatee Metropolitan Planning Organization's (MPO) Long Range Transportation Plan (LRTP)) identifies the safe and convenient crossing of the Manatee River as a major transportation concern. The plan notes that improvements to the river crossings are critical in maintaining access between the region and Tampa Bay. Transform 2045 lists US 301 and US 41 as two of the primary surface transportation routes used to transport goods to and through the region, underscoring the importance of the project link to the local and regional economies and associated transportation network.

According to United States Census Longitudinal Employer-Household Dynamics (LEHD) data, 99.7% of the jobs offered within a quarter-mile of the project corridor are filled by individuals who commute from outside the quarter-mile area. As such, much of this workforce/regional traffic (over 30% according to the Central Manatee Network Alternatives Analysis Origin-Destination Study Technical Memorandum) uses the DeSoto Bridge and the other limited number of Manatee River crossings to access the provided jobs. This percentage is expected to increase as Sarasota and Manatee Counties are expected to reach a regional population of over 1.1 million by 2050.

The project is expected to maintain and enhance a critical link for both regional and local traffic as one of three crossings of the Manatee River on Florida's west coast. Additionally, the potential

provision of bicycle and pedestrian facilities, will provide safe movement and connectivity for these modes across the river.

**TRAFFIC CIRCULATION:**

No major changes to traffic patterns are expected as this is an existing corridor and the project is anticipated to address the systemic deterioration and design deficiencies of the existing bridge structure. The project involves the potential in-kind replacement of the DeSoto Bridge.

**PUBLIC PARKING:**

Several businesses and establishments are located along the corridor with associated surface parking lots. Many of the surface lots are oriented to the street with access provided via US 301/US 41/SR 55. Some impacts to parking may occur; however, these specific impacts will be evaluated further as part of the Project Development and Environment (PD&E) Study.

**CONCLUDING STATEMENT:**

The project is anticipated to address the systemic deterioration of the existing bridge structure as well as the design deficiencies of the bridge through a replacement bridge. The new bridge, in turn, is intended to enhance area mobility by 1) maintaining and enhancing a critical link for both regional and local traffic as one of three crossings of the Manatee River on Florida's west coast, 2) enhancing incident management/emergency response times through the provision of paved shoulders, and 3) accommodating multimodal activity within the area by addressing gaps in the bicycle and pedestrian network/enhancing alternative transportation options across the Manatee River. A Sociocultural Effects Evaluation will be included as part of the Project Development and Environment Study.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage the surrounding communities in coordination with the Sarasota/Manatee MPO, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential project effects and enhancements regarding mobility within the area.

- Fixed Single Family Units (Six or More Dwelling Units Per Acre) / 60.85 / 11.18%

**COMMENTS ON EFFECTS TO RESOURCES:**

The DeSoto Bridge carries US 301/US 41/SR 55 across the Manatee River in Manatee County, connecting the Cities of Bradenton and Palmetto [both are U.S. Census Designated Places]. The bridge also connects communities within both cities that are designated as part of the Front Porch Florida Initiative [communities that are usually diverse and with a history of involvement in community-based efforts that are eligible for and receive priority consideration for special community revitalization funds and grants from state, federal, and other sources]. In addition, the southern portion of the project corridor is adjacent to a Florida Opportunity Zone [the federal Opportunity Zone Program aims to foster economic development and job creation in economically distressed communities]. Likewise, the northern portion of the project corridor occurs within one brownfield area [Palmetto Economic Enhancement District] which is now the defined City of Palmetto Community Redevelopment Area that has been established to encourage investment and revitalization within the older city central core.

Land uses within the 1,320-foot project buffer consist primarily of public/semi-public, residential, and retail/office with smaller acreages of vacant nonresidential, mining, and institutional. Specifically, 60.85 acres (11.18%) of high density residential [6 or more dwelling units per acre] and 1.38 acres (0.25%) of medium density residential [2-5 dwelling units per acre] uses are present within the 1,320-foot buffer; these uses are associated with Riviera Dunes, 210 Watermark, and neighborhoods [located in the northern and southern portions of the project corridor]. Specific community features associated with aesthetics occurring within the 1,320-foot buffer include one marina within the Riviera Dunes community, one existing recreational trail [Manatee River Trail] - part of the Office of Greenways and Trails paddling trail opportunity [Paddle Manatee Trails Corridor], three local park and recreational facilities [Veterans Memorial Park, Bradenton Waterfront Park, and Palmetto Estuary Preservation Project (also a Florida Managed Area) - the latter two parks are also National Park Projects], potential Water Management District owned land that primarily surrounds the Palmetto Estuary Preservation Project, and cultural resources.

US 301/US 41/SR 55 or Tamiami Trail is a designated Scenic Highway [The Tamiami Trail – Windows to the Gulf Coast Waters Scenic Highway]. According to the Florida Scenic Highway Program, the designation is along US 41 for 70 miles from the Sarasota/Charlotte County line to the Manatee/Hillsborough County line.

**VIEWSHED:**

The vertical profile of the bridge is not anticipated to change at this time as the proposed bridge replacement is to be in-kind with minor added elements to bring the bridge up to current standards. Therefore, viewsheds of the area [from both the bridge and the land/water standpoint] are not expected to be altered.

**COMPATABILITY:**

According to the Future Land Use Maps of the Cities of Palmetto and Bradenton, the project area will continue to support urban mixed-use development and recreational uses.

Given the presence of The Tamiami Trail – Windows to the Gulf Coast Waters Scenic Highway, coordination will take place with the Corridor Management Entity and the public as appropriate if the project is determined to impact the resources of this scenic corridor. The Tamiami Trail – Windows to the Gulf Coast Waters Scenic Highway Corridor Management Plan will also be consulted as the project advances.

**CONCLUDING STATEMENT:**

The project appears to be consistent with the future land use vision and aesthetic character of the corridor. The proposed bridge replacement is intended to enhance the physical use and aesthetic appeal of the bridge itself and overall corridor with the potential inclusion of shoulders and new bicycle and pedestrian facilities. However, minimal involvement regarding aesthetic effects is anticipated given temporary impacts to the viewshed and area aesthetics during bridge construction. A Sociocultural Effects Evaluation will be included as part of the Project Development and Environment Study.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage the surrounding communities in coordination with the Sarasota/Manatee Metropolitan Planning Organization, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential project effects as well as opinions and preferences regarding general design concepts related to aesthetics.

**Florida Site File Field Survey Project Boundaries (9)**

**Residential Areas / Acres / Percent**

- Fixed Single-Family Units (Two-Five Dwelling Units Per Acre) / 1.38 / 0.25%
- Fixed Single Family Units (Six or More Dwelling Units Per Acre) / 60.85 / 11.18%

**COMMENTS ON EFFECTS TO RESOURCES:**

This project involves the potential in-kind replacement of the DeSoto Bridge to address existing structural degradation and substandard design elements. To bring the bridge up to current Florida Department of Transportation (FDOT) design standards, the inclusion of paved shoulders as well as bicycle and pedestrian facilities will be considered as part of the project. Existing right-of-way along the project corridor ranges from 65 feet to 160 feet, narrower at the northern bridge approach and wider at the intersections with SR 64 and Haben Boulevard.

**RESIDENTIAL:**

There are some residential building structures that abut the right-of-way of the DeSoto Bridge project corridor. While additional right-of-way is anticipated to accommodate the updated bridge footprint to include elements such as shoulders and bicycle and pedestrian facilities to bring the bridge up to current standards, no residential relocations are anticipated at this time. Potential project impacts range from temporary driveway access closures and/or permanent driveway access modifications.

**NON-RESIDENTIAL:**

Numerous non-residential establishments are present along the DeSoto Bridge project corridor. While additional right-of-way is anticipated to accommodate the updated bridge footprint to include elements such as shoulders and bicycle and pedestrian facilities to bring the bridge up to current standards, no non-residential relocations are anticipated at this time. Potential project impacts range from temporary driveway access closures and/or permanent driveway access modifications.

**PUBLIC FACILITIES:**

Based on a preliminary evaluation, no public facilities [such as recreational areas] are expected to be negatively impacted by the proposed project. However, access to these features could temporarily be affected and/or modified as a result of project construction.

**CONCLUDING STATEMENT:**

While the proposed replacement of DeSoto Bridge is to be in-kind, additional right-of-way is anticipated to accommodate elements (such as shoulders and bicycle and pedestrian facilities) that will bring the bridge up to current standards. No relocations are expected at this time. Specific right-of-way requirements will be determined during the Project Development and Environment (PD&E) Study. The project will be designed to minimize right-of-way acquisition to the greatest extent practicable, and encroachment into surrounding parcels, if necessary, will be coordinated with the appropriate property owners. For these reasons, minimal involvement regarding relocation potential is anticipated. A Sociocultural Effects Evaluation will be included as part of the PD&E Study. If relocations are required during the PD&E Study, a Conceptual Stage Relocation Plan will also be prepared.

**CLC RECOMMENDATIONS:**

During the Project Development phase, FDOT District One will engage appropriate property owners in coordination with the Sarasota/Manatee MPO, Manatee County, and the Cities of Bradenton and Palmetto to solicit input on potential project effects to adjacent properties and identify alternatives that may minimize impacts. Further assessment of relocation effects will be conducted during the Project Development phase as more detailed and finalized project information regarding right-of-way needs becomes available.

RE: Cultural Resource Assessment Survey  
Project Development and Environment (PD&E) Study  
DeSoto Bridge Replacement  
Manatee County, Florida  
Financial Management No.: 442630-1-22-01

Dear Ms. Lotane,

Enclosed please find one copy of the report titled *Cultural Resource Assessment Survey (CRAS) for the DeSoto Bridge Replacement PD&E Study, SR 64 to Haben Boulevard, Cities of Bradenton and Palmettos, Manatee County, Florida*. This report presents the findings of a CRAS conducted in support of the proposed DeSoto Bridge replacement PD&E study in Manatee County, Florida. The Florida Department of Transportation (FDOT), District 1, is investigating three proposed bridge replacement alternatives to replace FDOT Bridge No. 130053, which carries US 301 (US 41) over the Manatee River. This project is federally funded for construction in 2027.

The project Area of Potential Effect (APE) was defined to include the existing and proposed right-of-way for the three alternatives combined. The architectural history APE includes the archaeological APE and was expanded to the back or side property lines of parcels adjacent to the right-of-way or a distance of no more than 100 meters (328 feet) from the right-of-way line.

The environmental review, consultation, and other actions required by applicable federal environmental laws for this project are being, or have been, carried out by the FDOT pursuant to 23 U.S.C. §327 and a Memorandum of Understanding (MOU) dated May 26, 2022 and executed by the Federal Highway Administration (FHWA) and FDOT.

[www.fdot.gov](http://www.fdot.gov)

Ms. Lotane, SHPO  
FM # 442630-1-22-01  
January 25, 2024  
Page 2

This CRAS was conducted to comply with Public Law 113-287 (Title 54 U.S.C.), which incorporates the provisions of the National Historic Preservation Act (NHPA) of 1966, as amended, and the Archeological and Historic Preservation Act of 1974, as amended. The study also meets the regulations for implementing NHPA Section 106 found in 36 CFR Part 800 (*Protection of Historic Properties*) and complies with Chapter 267 of the Florida Statutes and Rule Chapter 1A-46, Florida Administrative Code. The work was performed in accordance with Part 2, Chapter 8 of the FDOT's Project Development & Environment (PD&E) Manual (revised July 2023) as well as the Florida Division of Historical Resources' (FDHR) recommendations for such projects as stipulated in the FDHR's *Cultural Resource Management Standards & Operations Manual, Module Three: Guidelines for Use by Historic Preservation Professionals*. The principal investigator for this project meets the Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation (48 FR 44716-42).

The archaeological survey indicated that shovel testing within the archaeological APE was not possible due to the presence of marked buried utilities, steep artificial slopes, and drainage structures. No archaeological sites, features, or artifacts were identified during the survey. No additional archaeological survey is recommended.

The architectural history survey resulted in the identification and evaluation of one newly recorded historic building (8MA02569) within the APE. FDOT recommends 8MA02569 lacks the architectural distinction and significant historical associations necessary to be considered for listing in the NRHP and is recommended ineligible. No historic districts were identified. No further architectural history survey is recommended.

The existing DeSoto Bridge (FDOT Bridge No. 130053) is a 1957 reinforced concrete beam and girder bridge. The 2012 *Program Comment Issued for Streamlining Section 106 Review for Actions Affecting Post-1945 Concrete and Steel Bridges* (Federal Register 2012:68793–68795) “relieves federal agencies from the Section 106 requirement to consider the effects of undertakings on the bridge types identified in Section V of this Program Comment” if a bridge does not meet three considerations listed in Section IV (Federal Register 2012: 68792).

Based on the FMSF review, FDOT Bridge No. 130053 was previously evaluated by the Florida SHPO as not eligible for the NRHP due to its lack of engineering distinction and historical associations. Furthermore, the bridge is not located adjacent to or within an NRHP-listed or -eligible historic district. Architectural historians examined the bridge and determined that it is not one of the following bridge types: arch bridges, truss bridges, bridges with movable spans, suspension bridges, cable-stayed bridges, or covered bridges. FDOT Bridge No. 130053 was not identified by the latest statewide bridge survey (ACI 2012) as having “exceptional significance for association with an event or individual, or being a very early or particularly important example of its type in a State or the nation, having distinctive engineering or architectural features that depart from standard designs, such as an aesthetic railing or balustrade, includes spans of exceptional length or complexity, or displaying other elements that were engineered to respond to a unique environmental context,” which would exempt it from the Program Comment (Federal Register 2012:68794). The bridge is therefore excluded from Section 106 consideration (Federal Register

Ms. Lotane, SHPO  
FM # 442630-1-22-01  
January 25, 2024  
Page 3

2012:68793). As such, the bridge was not evaluated and its FMSF Form was not updated by the present study. The Section 106 responsibilities of FDOT and the FHWA have been completed with regard to FDOT Bridge No. 130053.

Based on the results of this study, it is the opinion of the District that no NRHP-listed or eligible cultural resources were identified within the project APE. No further cultural resources work is recommended.

I respectfully request your concurrence with the findings of the enclosed report.

If you have any questions or need further assistance, please contact Matt Marino at 954-336-3625 or [matthew.marino@dot.state.fl.us](mailto:matthew.marino@dot.state.fl.us).

Sincerely,

## EXECUTIVE SUMMARY

Geotechnical and Environmental Consultants, Inc. (GEC) was retained by TranSystems Corporation on behalf of the Florida Department of Transportation (FDOT) to provide a Contamination Screening Evaluation Report (CSER) for the SR 55 US 301/SR 41 (Tamiami Trail/1<sup>st</sup> Street East) Bridge (Bridge No. 130053) over the Manatee River from Manatee Avenue to Haben Boulevard Project Development and Environment (PD&E) project. This CSER was performed as part of Financial Project ID No. 442630-1-22-01.

The purpose of this evaluation was to assess the risk of encountering petroleum or hazardous substance contamination of soil, groundwater, surface water, or sediment that could adversely affect this project. The CSER activities included a review of public regulatory files and historical data sources, and a site reconnaissance of the project study area.

As a result of this evaluation, we have assigned Contamination Risk Ratings to ten sites. The ten site locations are shown on **Figure 4** and the contamination status of each site is summarized in **Table 1**. Using the FDOT Risk Ratings as defined in the FDOT PD&E Manual dated July 1, 2023, presented in **Appendix C**, GEC has identified **seven Low Risk** sites, **two Medium Risk** sites and **one High Risk** site.

**Table 1: Low Risk Sites**

Site No.	Site Name	Site Address	Risk Potential
1	Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245	520 1st Street West	Low
2	Gulfcoast Family Practice	202 Manatee Avenue East	Low
4	The Bradenton Herald	102 Manatee Avenue West	Low
5	Manatee Memorial Hospital	206 2nd Street East	Low
6	Gould & Lamb	101 Riverfront Boulevard	Low
7	Palmetto Economic Enhancement District	Study Area	Low
8	102 1st Street East Property	102 1st Street East	Low

**Table 2: Medium and High Risk Sites**

Site No.	Site Name	Site Address	Risk Potential
3	Historical Gas Station	101 Manatee Avenue West	Medium
9	7-Eleven Food Store No. 33110	208 US Highway 41	Medium
10	US 41 Bridge over the Manatee River Bridge No. 130053	US Highway 41	High

The District Contamination Impact Coordinator (DCIC) will direct or coordinate any requisite Level II investigation and/or Level III support.

The planned construction activities consist of building a new bridge, milling and resurfacing, sidewalk improvements, widening, and other surficial-type construction activities that will not require dewatering and are unlikely to encounter soil or groundwater impacts unless the construction activities are directly within the areas of impacts.

**Site 3** is located on the southwest corner of US Highway 41 and Manatee Avenue, outside the area of improvements. No construction support is anticipated.

**Site 9** is an active gas station without known impacts and is in an area of milling and resurfacing. No construction support is anticipated.

**Site 10** is the bridge itself (Bridge No. 130053). The bridge will require asbestos abatement during demolition. There is a friable asbestos-containing felt paper between the end bents and bridge decking. The estimated cost for asbestos abatement is \$3,500 per day with a 30-day duration, totaling \$105,000 for this project.

## **1.0 INTRODUCTION**

---

### **1.1 Contract Information**

---

GEC was retained by TranSystems Corporation on behalf FDOT to provide a CSER for the SR 55 US 301/SR 41 (Tamiami Trail/1<sup>st</sup> Street East) Bridge (Bridge No. 130053) over the Manatee River from Manatee Avenue to Haben Boulevard PD&E project. This CSER was performed as part of Financial Project ID No. 442630-1-22-01.

The presence of contaminated environmental media (soil, groundwater, surface water, and sediment) can have a significant negative impact on the cost and schedule to complete a bridge replacement and roadway improvement project. The purpose of this evaluation was the early identification of potential contamination sites that could impact this project and to provide valuable input for the design, right-of-way acquisition, and construction phases.

## **2.0 PROJECT DESCRIPTION**

---

The following sections describe the current study area conditions, the project construction plans and elements of the project that could be impacted by soil or groundwater contamination. Common terms used in this report can be found in **Appendix B**.

The project site consists of approximately 1.3 miles along SR 55 from Manatee Avenue to Haben Boulevard in Palmetto and Bradenton, Florida. The project alignment is shown on an excerpt of the U.S. Geological Survey (USGS) Palmetto and Bradenton, Florida Quadrangle maps (**Figure 1**) in the **Appendix**.

This project involves the in-kind replacement alternatives of the Hernando DeSoto Bridge (DeSoto Bridge), which carries SR 55 across the Manatee River which is navigable waters between the Cities of Bradenton and Palmetto within Manatee County (**Figure 1**), a project length of approximately 1.30 miles. To bring the bridge up to current FDOT design standards, the inclusion of paved shoulders as well as bicycle and pedestrian facilities will be considered as part of the project.

As the Manatee River divides the western half of Manatee County, separating the Cities of Bradenton and Palmetto, the DeSoto Bridge is one of three north-south crossings of the river that connects the two communities. The current bridge structure is a mid-level fixed structure consisting of two 12-foot travel lanes in each direction (four lanes total) separated by concrete Jersey barriers in the middle. It is 62 feet wide, 2,225 feet long, and consists of 30 concrete approach spans and three steel main spans. No shoulders or bicycle/pedestrian facilities are present on the bridge.

The landside segments of the roadway include two 12-foot travel lanes in each direction separated by a raised concrete and/or grass median with intermittent left and right turn lanes. Short sidewalk segments exist on the far southern and northern ends of the landside portions of the project corridor. While no transit service operates north-south on the project corridor, Manatee County Area Transit (MCAT) Route 3-Manatee Avenue operates along SR 64, crossing the project corridor twice.

The DeSoto Bridge was originally constructed in 1957 and is one of four bridges in Manatee County (along with Anna Maria Bridge, Cortez Bridge, and Longboat Pass Bridge) that requires replacement. Each has surpassed its 50-year life expectancy and is experiencing similar advanced corrosion issues; therefore, rehabilitation is no longer feasible. To avoid having all four bridges become structurally deficient at the same time, which would create challenging mobility issues for the traveling public and an unacceptable schedule of work in the geographic area, the FDOT District One has staggered the replacement of the bridges through a controlled schedule across several years. The DeSoto Bridge has been recommended for replacement within 5 to 10 years as it is expected to be classified as structurally deficient by year 2027.

Existing right-of-way along the project corridor ranges from 65 feet to 160 feet, narrower at the northern bridge approach and wider at the intersections with SR 64 and Haben Boulevard. Less than one acre of additional right-of-way is needed to provide the proposed typical section with sidewalk and shared use path connectivity.

## **2.1 Purpose & Need**

---

The purpose of this project is to address the structural degradation and substandard design elements of the existing DeSoto Bridge along SR 55 located between SR 64 and Haben Boulevard within the Cities of Bradenton and Palmetto in Manatee County. Other goals of the project are to 1) maintain a critical link for regional travel and 2) accommodate multimodal activity within the area. The need for the project is based on the following criteria:

### **PRIMARY NEED:**

#### **BRIDGE DEFICIENCIES: Address Continued Structural Degradation and Substandard Design Elements**

As noted within the FDOT District 1 2023 Summary Report regarding the condition of the DeSoto Bridge, the bridge has exceeded its design life of 50 years. The bridge superstructure is composed of 1950s pre-American Association of State Highway and Transportation Officials (AASHTO) standards post-tensioned (PT) concrete beams reinforced with steel PT bars. These beams have a long history of problems in Florida and are of concern due to their tendency to excessively deteriorate and the possibility of sudden failure. Although corrosion has not substantially affected the anchorage of the bridge beams to date, corrosion has been identified on the beam

end anchorage zones. The substructure is also rapidly deteriorating; gunite repairs previously performed on the footings are now failing on 93% of the footings. In addition, as revealed through an assessment of the bridge conducted by FDOT District 1 in March 2019 (which included corrosion testing of the concrete bridge material and rate of future corrosion progression), DeSoto Bridge falls on the low end of the fair condition per National Bridge Inspection ratings (with poor, fair, and good serving as the ratings). The substructure elements that were tested exceed the threshold levels (two to three times) for chloride intrusion and for corrosion potential concentrations. There is evidence that the high chloride contamination levels in the existing concrete are causing recent concrete repairs to fail prematurely; the pier columns and footings have reached a point where repairing concrete materials is no longer an option to provide long-term corrosion control.

The existing DeSoto Bridge does not meet current Florida Department of Transportation (FDOT) design standards due to its lack of the required inside and outside shoulder widths and bicycle and pedestrian facilities. According to the 2024 FDOT Design Manual, the typical section for this type of bridge requires 12-foot lanes, 10-foot outside shoulders, and 6-foot inside shoulders. Sidewalks and/or bicycle facilities need to be considered to allow for the safe movement of pedestrians and bicyclists along the bridge. The lack of inside and outside shoulders on the bridge restricts the ability of drivers to avoid hazards or react to changing driving conditions within the directional travel lanes without causing crashes. In addition, the current bridge configuration constrains emergency and service vehicle access, particularly during periods of congestion.

The project is intended to address the bridge's systemic deterioration and design deficiencies.

**SECONDARY NEEDS:**

**SYSTEM LINKAGE: Maintain a Critical Link for Regional Travel**

The DeSoto Bridge is integral to facilitating the movement of regional commuter, visitor, and freight traffic as one of three crossings US 41 Bus (Green Bridge), and the I-75 bridges over the Manatee River on Florida's west coast. According to United States Census Longitudinal Employer-Household Dynamics data, 10,633 jobs exist within 0.25 mile of the project corridor; 99.7% of these jobs are filled by individuals who commute from outside the area within a 0.25-mile radius. Over 30 percent of the workforce/regional traffic (Central Manatee Network Alternatives Analysis Origin-Destination Study Technical Memorandum) uses the DeSoto, Green, and I-75 Bridges to access the provided jobs. This percentage is anticipated to increase because Sarasota and Manatee Counties are expected to reach a regional population of over 1.1 million by 2050.

In addition, Transform 2045 (the Sarasota/Manatee Metropolitan Planning Organization's [MPO] Long Range Transportation Plan [LRTP], October 26, 2020, identifies the safe and convenient crossing of the Manatee River as a major transportation concern. The plan notes that improvements to all river crossings are critical in maintaining access between Tampa Bay and the

surrounding the region. LRTP as two of the primary surface transportation routes used to transport goods to and through the region, underscoring the importance of the DeSoto Bridge to the local and regional economies and associated transportation network.

Maintaining and enhancing this regional link allows commuters, visitors, and freight providers to access to area jobs, services, tourist destinations, and distribution centers.

### **MODAL INTERRELATIONSHIPS: Accommodate Multimodal Activity**

Currently, no pedestrian or bicycle facilities are present on the DeSoto Bridge. The closest crossing of the Manatee River with bicycle and pedestrian accommodations is the Green Bridge (US 41 Business/8th Ave) located 0.5 mile to the west. In addition, no transit service operates north-south on the project corridor; only one Manatee County Area Transit bus route (Route 3-Manatee Avenue) operates along SR 64 (southern project limit).

The current population, projected population growth, the concentrated efforts by both cities to invest in and revitalize their respective older central cores (designating an Opportunity Zone in the City of Bradenton and a Community Redevelopment Area in the City of Palmetto), and the appeal of destinations within the area to tourists [i.e. Bradenton Area Convention Center and waterfront recreational features] have created latent demand for increased bicycle and pedestrian activity in the area. Additionally, the areas around the bridge approaches are home to a significant transit-dependent population. This group includes low-income individuals, those who are young or of driving age but unable to drive, and households without access to a vehicle. They are more likely to walk, bike, or use public transportation to reach essential services. Recognizing these factors highlights the urgent need to provide diverse transportation options. The inclusion of bicycle and pedestrian facilities in the design of the proposed replacement bridge is expected to improve multimodal connectivity and accessibility across the Manatee River, thereby supporting local transportation planning objectives.

### **Existing Conditions**

Within the project limits, SR 55 is classified as an Urban Principal Arterial and falls within the 2020 Urban Area Boundary for Manatee County, in the Cities of Bradenton and Palmetto. The context classification for SR 55 is C3C-Suburban Commercial. The current design and posted speeds for the project corridor are 50 miles per hour (mph).

The existing bridge is a mid-level fixed structure that consists of two 12-foot travel lanes in each direction, totaling four lanes, separated by a four-foot median with a concrete barrier in the middle. Additionally, it has 2-foot outside shoulders and 3.5-foot raised traffic railing. The bridge measures 62 feet in width, 2,225 feet in length, and comprises 30 concrete approach spans along with three steel main spans, as shown in **Figure 2-1**. Currently, no bicycle or pedestrian facilities are present on the bridge.

**Figure 2.1**

The southern landside urban segment roadway features include two 12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders, and right turn lanes and a short segment of sidewalk at the begin project as shown in **Figure 2-2**:

**Figure 2.2**

The northern landside segment rural roadway features include two-12-foot travel lanes in each direction, separated by a raised concrete median with 10-foot inside shoulders that transitions to a 22-foot median, and five-foot paved shoulders. There is a short segment of sidewalk near the 7-Eleven Convenience Store. While no transit service operates north-south within the project limits, the Manatee County Area Transit (MCAT) Route 3-Manatee Avenue does operate along SR 64.

## **2.2 Current Land Use**

---

The current land uses within the study area are shown on the St. Johns River Water Management District (SJRWMD) Map on **Figure 3** and are summarized as follows:

- Residential, High Density
- Commercial and Services
- Institutional
- Open Land
- Reservoirs
- Bays and Estuaries
- Wetland Forested Mixed
- Transportation
- Utilities

No obvious land uses were identified that would imply a potential for obvious contamination impacts.

## **2.3 Project Elements**

---

The DeSoto Bridge is scheduled for an in-kind replacement in FY 2027 due to being considered structurally deficient. Two build alternatives were analyzed for the DeSoto Bridge (East and West Alternatives) and are described in more detail in the Preliminary Engineering Report. Based on engineering and environmental analysis, the East Alternative was determined to be the Preferred Alternative.

The Preferred Alternative would provide a new 4-lane bridge. The new bridge would have an alignment shifted to the east of the existing bridge.

The Preferred Alternative provides a new bridge over the Manatee River, the proposed construction includes the removal of the existing bridge and bringing the new bridge crossing up to current FDOT design standards.

Based on our review of the DeSoto Bridge Roll Plot plans, we understand the following project elements are proposed along the SR 55 alignment:

- Bridge Replacement
- Lane Modification
- Median Modification
- Milling and Resurfacing
- Sidewalk Improvements
- Barrier and Retaining Wall Construction

## **2.4 Potential Contamination Impacts**

---

No project elements are currently proposed on the Roll Plot that show significant excavation or dewatering activities that could be impacted by soil and/or groundwater contamination.

## **3.0 CONTAMINATION SCREENING METHODOLOGY**

---

GEC conducted this evaluation in general accordance with the FDOT PD&E Manual dated July 1, 2023. The study area is defined as:

1. **500 feet from the proposed ROW line for petroleum, drycleaners, and other contaminated sites that are not included in numbers 2 and 3 below.**
2. **1,000 feet from the proposed ROW line for non-landfill solid waste sites (such as recycling facilities, transfer stations, and debris management areas).**
3. **½ mile from the proposed ROW for CERCLA, National Priorities List (NPL) Superfund sites, or solid waste landfill sites.**

These search radii are shown on the Potential Contamination Site Location Map (**Figure 4.**)

GEC reviewed relevant information from the FDEP, USEPA, and local agencies in Manatee County to identify known or potential contamination sites within the study area. Historical aerial photographs and other published historical sources were reviewed as part of this CSER. GEC performed a site reconnaissance of the properties within the study area and attempted to interview individuals with knowledge of the study area's environmental status.

Based on the results of the contamination screening activities, GEC assigned Risk Ratings to sites. The risk rating system was developed by FDOT and incorporates four levels of risk: **No, Low, Medium and High**. For a description of the four risk levels please refer to **Appendix C**.

## **4.0 GEOLOGIC AND GEOGRAPHIC CONDITIONS**

---

### **4.1 Local Geology and Soil Description**

---

The U.S.D.A. Soil Conservation Service (SCS) Soil Survey for Manatee County, Florida (1983) generally identifies the soils in the area of the Subject Property as EauGallie fine sand. The survey describes EauGallie fine sand as a nearly level, poorly drained soil in broad areas of flatwoods. Slopes are smooth and range from 0 to 2 percent.

The surface layer of EauGallie fine sand is typically 5 inches of very dark gray fine sand. The subsurface layer is approximately 23 inches thick and consists of grayish brown and light

brownish gray fine sand. The subsoil consists of 14 inches of black fine sand that is coated with organic matter over 8 inches of grayish brown sandy clay loam. The substratum, to an approximate depth of 65 inches, is grayish brown fine sand, loamy fine sand, and fine sandy loam.

As part of the CSER, limited study area-specific geology was also defined by reviewing soil and groundwater data during our file reviews. The natural soil in this area appears to be a brown fine sand to a depth of about 10 feet and the groundwater table is less than approximately 5 feet in depth.

## **4.2 Regional Geology**

---

Manatee County is underlain by a triple aquifer system consisting of the surficial aquifer, an intermediate aquifer, and the Floridan Aquifer. The surficial aquifer consists of Pleistocene to Recent age sand or shell sands that grade downward into the confining unit between the surficial and intermediate aquifers. This confining unit consists of Pliocene and Pleistocene clayey sands, clay and marl. The thickness of the surficial aquifer ranges from only a few feet to over 50 feet thick. The confining unit ranges from less than 25 feet in the northern part of the county to over 100 feet in the east.

A sequence of sandy clay, clay and marl underlie the surficial aquifer and form the confining layer between the surficial and intermediate aquifers. The intermediate aquifer system is comprised of one, two or three water-bearing units comprised of sand and carbonate rocks of the Miocene Hawthorn Formation and the lower portion of the Pliocene Tamiami Formation. The thickness of the intermediate aquifer in Manatee County ranges from 200 feet in the northwest to 400 feet in the southeast corner of the county.

The confining unit between the intermediate and Floridan aquifer is comprised of sandy clay and clayey sand of the lower Hawthorn formation. In portions of Manatee County, the underlying upper Tampa Formation may be hydraulically connected with the Hawthorn formation, and is therefore included as part of the intermediate aquifer. In these areas, a confining unit separates the carbonate units of the Tampa Formation from the underlying Floridan aquifer carbonates. The principal potable aquifer in the region is the upper Floridan aquifer, which underlies the intermediate aquifer.

Currently, the surficial aquifer in Manatee County is undeveloped as a source of drinking water. However, small volumes are used for rural domestic and livestock supply, lawn irrigation, and for heating and air conditioning.

The upper Floridan Aquifer is the most productive aquifer in Manatee County and is composed of a thick sequence of limestone and dolomite. Most groundwater produced from the Floridan Aquifer is used for municipal supplies. Agricultural and industrial uses are minor.

#### **4.3 USGS Quadrangle Map**

---

The study area has been transposed onto the United States Geological Survey (USGS) Palmetto and Bradenton, Florida Quadrangle maps for this area, as shown on **Figure 1**. According to the quadrangle map, the natural ground surface elevation in the vicinity of the study area ranges from +0 feet to +10 feet NGVD. The DeSoto bridge is visible on the Quadrangle Map.

No landfills, borrow pits, quarries, or other conditions are depicted that would represent obvious potential contamination concerns on, or in the immediate vicinity of, the study area. However, areas of fill and earthwork are depicted on the north side of the river.

#### **4.4 NRCS Soil Survey Review**

---

The NRCS Soil Survey of Manatee County, Florida was reviewed for information regarding near-surface soil conditions within the project limits, as shown on **Figure 5**. The following soil types were identified within the study area:

**Table 3: Soil Types**

Unit No.	Manatee County Soil Name
5	Bradenton fine sand, limestone substratum
9	Canaveral sand, filled
12	Cassia fine sand, moderately well drained
14	Chobee variant sandy clay loam
21	Estero muck, tidal, 0 to 1 percent slopes
100	Waters of the Gulf of Mexico

No landfills, quarries, or other conditions are depicted that would represent obvious potential contamination concerns on, or in the immediate vicinity of, the study area.

*Information contained in the NRCS Soil Survey is very general and may be outdated.* It may not therefore be reflective of actual soil and groundwater conditions, particularly if recent development in the site vicinity has modified soil conditions or surface/subsurface drainage.

## 5.0 HISTORICAL DATA REVIEW

---

### 5.1 Historical Aerial Photographs

---

Historical aerial photographs of the study area were reviewed to evaluate past land use and to identify features that may indicate hazardous material or petroleum contamination. Aerial photographs were obtained from EDR and Google Earth. Aerial photographs for the following years were reviewed: 1951, 1957, 1970, 1973, 1977, 1980, 1995, 2003, 2012, 2018, and 2022.

Dating back to 1951, some residential development and a small citrus grove (approximately 5 acres or less) are visible on the southern end of the study area. The majority of the study area is comprised of the Manatee River, and the northern end is marshland. In 1957, the existing bridge (**Site No. 10**), land surrounding the bridge, and a portion of the Manatee Memorial Hospital have been constructed. Botts Standard Service Station (**Site No. 1**) and Manatee Memorial Hospital (**Site No. 5**) are visible in 1970. The hospital appeared expanded by 1980, and the southern portion of the study area was more developed, both commercially and residentially. The office building at **Site No. 6** is visible in 1995, and the gas station on the north side of the study area, **Site No. 9**, is visible in 2003.

**Table 5** describes the aerial photograph details for the ten sites assigned Low, Medium or High Contamination Risk Ratings (CRR). Pertinent details identified in the historical aerial photographs are also included in the Potential Contamination Site Descriptions in **Table 4**. The historical aerial photographs are provided in **Appendix A**.

### 5.2 City Directories

---

City Directories are historical listings of businesses and residences in a given area, similar to a standard telephone book. The site occupant and addresses listed for previous years can identify past land uses. GEC contracted with Environmental Data Resources (EDR) to provide a city directory review for the study area. EDR researched city directories from 1939 through 2020 at approximately 5-year intervals. Aside from **Site No. 1**, no listings were identified in the City Directory review for 1<sup>st</sup> Street (US Highway 41.) The EDR City Directory Report is included in **Appendix D**.

### 5.3 Fire Insurance Maps

---

Fire insurance maps are used by insurance companies in assessing fire risk. These maps contain details about building construction, business type, building contents, fuel storage tanks, and other factors affecting fire risk.

Sanborn Fire Insurance maps dated 1915, 1922, 1926, 1929, 1948, and 1966 were available for the southern portion of the study area, south of the Manatee River. No coverage was available for the portion of the Study Area north of the river. **Table 3** summarizes the fire insurance map findings. The fire insurance map search information is included in **Appendix D**.

#### **5.4 Historical Quadrangle Maps**

---

GEC reviewed historical quadrangle maps at the [www.Historicaerials.com](http://www.Historicaerials.com) website. The 1947, 1966, 1970, 1982, 2000, 2012, 2015, 2018, and 2021 Bradenton, FL maps (south of Manatee River) were reviewed. Additionally, the Palmetto, FL maps (north of Manatee River) for 1944, 1961, 1965, 1970, 1982, 1987, 2012, 2015, 2018, and 2021 were reviewed.

Urban development is shown on the 1947 and 1966 Bradenton maps, with the hospital depicted on the 1966 map. The area north of Manatee Avenue is shown on the 1970 map as having been filled. Additional development is shown on the 1982 and 2000 maps.

The study area is shown on the 1944 Palmetto, FL map as marshland and is part of the Manatee River. US Highway 41 and the bridge over the Manatee River are shown in the 1965 and later maps; no land uses were shown. Areas of excavation are depicted outside the study area, at the locations of the current retention ponds and nearby marina.

No structures or land uses are depicted on the 2012 through 2018 topographic maps.

The historical quadrangle maps do not depict landfills, borrow pits, quarries, or other conditions that would represent potential contamination concerns on, or in the immediate vicinity of, the study area. The areas of fill added during the construction of U.S. Highway 41 and the bridge are not considered to present a contamination threat.

#### **5.5 Historical Contamination Screening Evaluation Report**

---

No historical Contamination Screening Evaluation Reports were available for the study area.

### **6.0 PUBLIC RECORD REVIEW**

---

GEC conducted a review of the public record for the study area including information obtained from the USEPA and the FDEP. As a part of our review, GEC subcontracted with EDR for a regulatory database search. The EDR Radius Map Report is included in **Appendix E**.

### **6.1 Florida Department of Environmental Protection (FDEP) Databases**

The FDEP has compiled several databases that are useful in identifying potential sources of hazardous material or petroleum product contamination. The FDEP databases reviewed for this study and their common abbreviations are provided in **Appendix F**.

### **6.2 United States Environmental Protection Agency (USEPA) Databases**

The federal government has compiled several databases that are useful in identifying potential sources of hazardous material or petroleum product contamination. The federal databases reviewed for this study and their common abbreviations are provided in **Appendix G**.

### **6.3 FDEP OCULUS Document Management System, Map Direct Website, and Nexus Portal**

The FDEP uses the OCULUS Document Management System, Map Direct Website, and Nexus Portal to provide public record information for petroleum or hazardous material releases to the environment, generators of hazardous waste, and solid waste facilities. Information contained in this data management system includes the status of active and abandoned storage tanks, tank inspection reports, tank closure reports, environmental assessment reports, remedial action reports, hazardous waste generator compliance details, and solid waste facility compliance details.

GEC reviewed the OCULUS Document Management System, Map Direct Website, and Nexus Portal within the search distances provided in Section 4.0. The results of our review have been incorporated in our Potential Contamination Site Descriptions in **Table 4**. The FDEP OCULUS, Map Direct and Nexus Portal Information can be found in **Appendix H**.

### **6.4 EDB Delineated Areas**

The Florida Legislature had the FDEP implement the Delineated Areas Program in 1988 under Chapter 62-524, FAC. The purpose of the program was to protect public health and groundwater resources by regulating potable water well construction and testing standards for areas of known groundwater contamination. During the period 1962 to 1980, the Florida Department of Agriculture and Consumer Services (FDACS) conducted widespread applications of ethylene dibromide (EDB), an agricultural pesticide, to control nematodes in citrus groves. In 1983, the FDEP began testing groundwater in potable wells throughout Florida due to the discovery of EDB in wells in other states. The delineated areas of EDB groundwater contamination are shown on the FDEP Map Direct website. The potable wells, agricultural or residential, with confirmed impacts were shown on the website with a 1,000-foot buffer zone in an attempt to project future

migration of contaminants. However, this does not mean that there is not EDB contamination outside of that 1,000-foot zone.

After reviewing these EDB-delineated areas on the FDEP Map Direct website, GEC found no EDB-delineation areas within the study area.

### 6.5 Agricultural Land Use

A small area of citrus (approximately 5 acres) was identified to the north of Manatee Avenue in the 1951 aerial photograph. The area was redeveloped with the reclaimed/filled land surrounding the existing bridge and surrounding area by 1957. Due to the relatively small area of agricultural use and redevelopment of the area where it was once located, the former groves are not considered to pose a risk to this project.

GEC did not identify any citrus groves, cattle pens, farm/ranch buildings, irrigation wells, or water towers in the study area during the historical aerial photograph review or during the site reconnaissance.

### 6.6 Railroad Corridors

No historical or current railroad corridors are located in the study area.

### 6.7 Cattle Dip Vats

Cattle dip vats were a response to cattle tick fever in the 1890s. The USDA initiated the cattle dip vat program in 1906 and approximately 3,200 cattle dip vats had been constructed by 1940.

Cattle dip vats were used until the 1960s and many vats have not been located or documented. Cattle dip vats were used to apply pesticides to cattle and other livestock, kill ticks, and thereby eliminate tick-borne diseases. The vats were typically constructed of concrete. They consisted

Figure 6

of four sections; the entrance slide, dipping vat, exit stairs and drip pad. Cattle entered the chute leading to the entrance slide, slid down into the pesticide-filled vat, swam or walked across the vat and walked up the exit stairs to the drip pad. The vats were roughly four feet wide, seven feet deep, and 40 feet long as shown on **Figure 6**.

Due to the relatively small size of the vat and the narrow profile, it is difficult to identify a cattle dip vat from aerial photographs, or in a wooded area. Cattle dip vats are typically identified when the landowner reveals the location, when they are located near historical cattle pens and chutes, and by happening upon them. To add to the difficulty in identifying historical cattle dip vats, many landowners removed the vats when the program was closed. They either dug up the vat or broke up the concrete and covered it with soil.

No cattle dip vats were identified within the study area through public record and database review, historical aerial photograph review, or site reconnaissance. Based on available information, we found no evidence cattle dip vats within the study area contribute to contamination risk for this project.

## **7.0 INTERVIEWS**

---

Due to the abundance of publicly available information of the sites, no regulatory interviews were conducted.

## **8.0 SITE RECONNAISSANCE**

---

A GEC representative performed a reconnaissance of the study area on February 13, 2024. The purpose of the reconnaissance was to document current conditions and evaluate whether current land uses could result in hazardous material or petroleum product contamination of environmental media.

The properties within the project study area were visually inspected for evidence of contamination such as stressed vegetation, underground tank vent and fill pipes, dumping, accumulated areas of debris, evidence of buried materials, and ground staining.

Details of the site reconnaissance are incorporated in the Potential Contamination Site Descriptions in **Table 4**. Photographs obtained for each potential contamination site are also included in **Table 4**.

## **9.0 CONCLUSIONS AND RECOMMENDATIONS**

---

This CSER has identified ten sites that, in GEC's opinion, have some risk of contamination impacts to this project. The site locations are shown on **Figure 4**. **Table 4** summarizes the findings for each rated site.

### 9.1 Potential Contamination Sites

Using the FDOT Risk Ratings presented in **Appendix C**, we have identified **seven Low Risk** sites, **two Medium Risk** sites and **one High Risk** site.

**Table 1: Low Risk Sites**

Site No.	Site Name	Site Address	Risk Potential
1	Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245	520 1st Street West	Low
2	Gulfcoast Family Practice	202 Manatee Avenue East	Low
4	The Bradenton Herald	102 Manatee Avenue West	Low
5	Manatee Memorial Hospital	206 2nd Street East	Low
6	Gould & Lamb	101 Riverfront Boulevard	Low
7	Palmetto Economic Enhancement District	Study Area	Low
8	102 1st Street East Property	102 1st Street East	Low

**Table 2: Medium and High Risk Sites**

Site No.	Site Name	Site Address	Risk Potential
3	Historical Gas Station	101 Manatee Avenue West	Medium
9	7-Eleven Food Store No. 33110	208 US Highway 41	Medium
10	US 41 Bridge over the Manatee River Bridge No. 130053	US Highway 41	High

### 9.2 Level II Impact to Construction Assessment (ICA) Recommendations

The District Contamination Impact Coordinator (DCIC) will direct or coordinate any requisite Level II investigation and/or Level III support.

The planned construction activities consist of building a new bridge, milling and resurfacing, sidewalk improvements, widening, and other surficial-type construction activities that will not require dewatering and are unlikely to encounter soil or groundwater impacts unless the construction activities are directly within the areas of impacts.

**Site 3** is located on the southwest corner of US Highway 41 and Manatee Avenue, outside the area of improvements. No construction support is anticipated.

**Site 9** is an active gas station without known impacts and is in an area of milling and resurfacing. No construction support is anticipated.

**Site 10** is the bridge itself (Bridge 130053). The bridge will require asbestos abatement during demolition. There is a friable asbestos-containing felt paper between the end bents and bridge decking. The estimated cost for asbestos abatement is \$3,500 per day with a 30-day duration, totaling \$105,000 for this project.

### **9.3 CSER Update**

---

This CSER should be updated if right of way acquisition or construction will occur more than **one year** from the date of this report to determine if additional assessment is warranted due to significant changes in site conditions or project design.

### **10.0 LIMITATIONS**

---

The findings, opinions, conclusions and recommendations presented herein are based in part on reasonably ascertainable information contained in the public record. GEC does not warrant or guarantee the accuracy or completeness of this information. Some of this public record information may be dated and not representative of conditions at the time this report was prepared (February through April 2024), or in the future. Additional limitations are as follows:

- Not discussed in this report are properties that have been historically undeveloped land, are associated with residential use and do not appear to pose a contamination risk, or are professional/commercial establishments that are not associated with hazardous materials or petroleum products.
- This study also does not include surveys of wetlands, endangered species, asbestos containing materials, lead-based paints, or other potential hazardous building materials.

### **11.0 USE OF THIS REPORT**

---

GEC has prepared this report for the exclusive use of our client, TranSystems Corporation and FDOT, and for application to our client's project. GEC is not responsible for any other party's interpretation or use of this report's data or recommendations without our written authorization.

GEC has performed the services described in this report in a manner consistent with that level of care and skill ordinarily exercised by members of our profession currently practicing in Central Florida. No other representation is made or implied in this document.

The conclusions and recommendations should be disregarded if the final project design differs from the project description in this report. If such changes are contemplated, GEC should be retained to review the new plans to assess the applicability of this report in light of proposed changes.

Potential Contamination Site Summary

From Manatee River to Haben Boulevard PD&E STUDY

GEC Project No. 5485E

Financial Project ID 442630-1-22-01

Site No:	<b>1</b>		Risk Potential:	<b>LOW</b>	
Site Name	<b>Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245</b>				
Site Address	520 1st Street West				
Site Location	Northwest corner of the US 41 and 6th Avenue West intersection				
Distance/Direction	300 feet/ South				
Facility ID Nos:	8510778, SQG_65171				
Database Sources:	EDR Hist Auto, RCRA-NonGen, UST, LUST, Hazardous Waste Generator				
Historical Land Use	Vacant land, part of a residential property				
Current Land Use	Vacated CVS Pharmacy retail store				
Contaminants	Hazardous Materials and Petroleum Products				
TANKS	U/A	Capacity (gal)	Content	Installed	Removed
3	U	10,000	Unleaded Gasoline	1-1-82	3-4-03
1	U	10,000	Vehicular Diesel	1-1-82	3-3-03
1	U	1,000	Other Nonregulated	7-1-82	12-31-87
2	U	2,500	Unk. Abandoned	Unk.	3-3-03
Discharge Date:	5-9-90		Cleanup Date:	5-28-04	
	Soil		Groundwater		
Documented/ Known Impacts:	No		No		

**PUBLIC RECORDS:** A discharge was reported in 1990. The underground fuel storage tanks were removed in March 2003 when the former gas station was closed. The facility was demolished in 2004, and redeveloped with the current retail/commercial building. The discharge was issued a No Further Action closure status by FDEP in May 2004.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site was developed with a closed and vacated CVS Pharmacy retail store. No evidence of the former gas station was observed. Additionally, no contamination impacts were noted.

**CONCLUSIONS:** Because the former filling station has been demolished and redeveloped, along with the regulatory closure order demonstrating the lack of remaining contamination impacts, this former facility has been assigned a Contamination Risk Rating (CRR) of **Low**.

View of the closed CVS Pharmacy retail store from the southeast corner, facing northwest.

Site No:	<b>2</b>		Risk Potential:	<b>LOW</b>	
Site Name	<b>Gulfcoast Family Practice</b>				
Site Address	202 Manatee Avenue East				
Site Location	Southeast corner of the 2nd Street East and Manatee Avenue intersection				
Distance/Direction	400 feet / East				
Facility ID Nos:	SQG_66529				
Database Sources:	Hazardous Waste Generator				
Historical Land Use	Vacant land, small office building				
Current Land Use	Medical walk-in clinic				
Contaminants	N/A				
TANKS	U/A	Capacity (gal)	Content	Installed	Removed
n/a					
Discharge Date:	n/a		Cleanup Date:	n/a	
	Soil		Groundwater		
Documented/ Known Impacts:	No		No		

**PUBLIC RECORDS:** This facility is a medical office which used X-ray machines at one time. The machines were removed by 2013. No hazardous wastes are currently generated, and no violations or contamination impacts have been reported.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site was developed with a small private medical walk-in clinic and family practitioner. No hazardous materials or contamination impacts were observed.

**CONCLUSIONS:** Based on the lack of reported contamination impacts at the facility, the facility has been assigned a CRR of **Low**.

View of the current medical clinic from the northeast corner, facing west along Manatee Avenue.

Potential Contamination Site Summary

From Manatee River to Haben Boulevard PD&E STUDY

GEC Project No. 5485E

Financial Project ID 442630-1-22-01

Site No:	3		Risk Potential:	MEDIUM	
Site Name	Historical Gas Station				
Site Address	101 Manatee Avenue West				
Site Location	Southwest corner of the US 41 and Manatee Avenue West intersection				
Distance/Direction	Adjacent / Southeast				
Facility ID Nos:	n/a				
Database Sources:	Sanborn Maps				
Historical Land Use	Vacant land, part of a residential property, filling station (~1929)				
Current Land Use	Self-storage and small commercial tenants				
Contaminants	Hazardous Materials and Petroleum Products				
TANKS	U/A	Capacity (gal)	Content	Installed	Removed
n/a					
Discharge Date:	Unk.	Cleanup Date:	Unk.		
	Soil		Groundwater		
Documented/ Known Impacts:	Unk.		Unk.		

**PUBLIC RECORDS:** A filling station was depicted on the 1929 Sanborn map. The site was depicted as vacant on the 1926 and 1948 maps, and occupied by a restaurant on the 1966 map. A portion of this property lies beneath the US Highway 41 and Manatee Avenue intersection.

Based on historical aerial photographs, the gas station was not confirmed. A historical building was demolished by 1995, and replaced by a Checkers drive-through restaurant through 2013. The current self-storage building was constructed by 2022. No records were available pertaining to the former facility.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The location of the former filling station consisted of greenspace at the northeast corner of the above-referenced Aria apartment complex (Site No. 3).

**CONCLUSIONS:** This location was a gas station almost 100 years ago and a portion of it appears to be under the US Highway 41 and Manatee Avenue intersection. While unlikely, there is a potential for underground tanks or fuel impacts; therefore, this facility has been assigned a CRR of **Medium**.

The approximate location of the former filling station (~1929), as shown on a 1980 aerial photograph. Site No. 1, the former Botts Standard Service Station, is visible to the adjacent south of the historical gas station property.

Depiction of the former filling station on the 1929 Sanborn map.

**Potential Contamination Site Summary**

GEC Project No. 5485E

Site No:	<b>4</b>		Risk Potential:	<b>LOW</b>	
Site Name	<b>The Bradenton Herald</b>				
Site Address	102 Manatee Avenue West				
Site Location	Northwest corner of the US 41 and Manatee Avenue West intersection				
Distance/Direction	200 feet / West				
Facility ID Nos:	FLR000021345, 8630014				
Database Sources:	UST, LUST, RCRA-VSQG, DWM Contamination				
Historical Land Use	Large single family residential parcel, newspaper office				
Current Land Use	Apartment complex				
Contaminants	Hazardous Materials				
TANKS	U/A	Capacity (gal)	Content	Installed	Removed
1	U	4,000	Unleaded Gasoline	6-1-84	4-1-97
1	A	1,000	Unleaded Gasoline	6-1-06	5-1-04
Discharge Date:	5-13-97	Cleanup Date:	2-18-98		
	Soil		Groundwater		
Documented/ Known Impacts:	No		No		

**PUBLIC RECORDS:** One underground fuel tank was removed from the facility in 1997. Slight concentrations of groundwater impacts were detected in a temporary well installed and sampled at that time. No excessive soil or groundwater impacts were confirmed in August 1997, during a Site Assessment. A No Further Action closure was issued by FDEP in February 1998.

The facility was previously developed with a newspaper office and printing facility. Several inspections took place between 1982 and 2008; no significant violations or compliance issues were reported

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The former site was redeveloped with a large multi-story, multi-building apartment complex, parking lot, recreational areas, and landscaping. No hazardous materials or contamination impacts were observed.

**CONCLUSIONS:** Based on the lack of remaining contamination, the regulatory closure order, and the redevelopment of the property into apartment residences, the facility has been assigned a CRR of **Low**.

Generalized view of the Aria apartment complex.

Site No:	<b>5</b>		Risk Potential:	<b>LOW</b>	
Site Name	<b>Manatee Memorial Hospital</b>				
Site Address	206 2nd Street East				
Site Location	Northeast corner of the US 41 and Manatee Avenue East intersection				
Distance/Direction	Adjacent / East				
Facility ID Nos:	FLD982098782, 9100283				
Database Sources:	RCRA-SQG, UST, AST, Hazardous Waste Generator				
Historical Land Use	Reclaimed land from the Manatee River				
Current Land Use	Manatee Memorial Hospital				
Contaminants	Hazardous Materials and Petroleum Products				
TANKS	U/A	Capacity (gal)	Content	Installed	Removed
1	U	550	Fuel Oil - Onsite Heat	7-1-65	10-31-90
2	U	5,000	Emergency Generator Diesel	7-1-65	6-1-98
1	U	6,136	Emergency Generator Diesel	8-1-91	6-1-05
1	A	6,000	Emergency Generator Diesel	6-1-98	In Use
1	A	6,000	Emergency Generator Diesel	10-1-06	In Use
1	A	18,205	Emergency Generator Diesel	11-1-19	In Use
Discharge Date:	n/a	Cleanup Date:	n/a		
	Soil		Groundwater		
Documented/ Known Impacts:	No		No		

**PUBLIC RECORDS:** The facility's original fuel storage tanks, used for the facility's boilers, were removed in 1998. No assessments were available in the public file, though no contamination impacts were reported for any of the underground fuel tank removals. The original tanks were located about 430 feet east of US Highway 41, near 2<sup>nd</sup> Street East.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The property was developed with a large public hospital and affiliated services. The emergency generator was observed on the east side of the property, near the intersection of 2nd Street East with Riverside Drive. No hazardous materials or contamination impacts were observed.

**CONCLUSIONS:** Based on the lack of reported contamination impacts at the facility, the previous tanks being > 400 feet from US Highway 41, and the current generator tanks being aboveground in nature, the facility has been assigned a CRR of **Low**.

View of the southern portion of the Manatee Memorial Hospital building, facing north.

**Potential Contamination Site Summary**

**From Manatee River to Haben Boulevard PD&E STUDY**

GEC Project No. 5485E

Financial Project ID 442630-1-22-01

Site No:	6		Risk Potential:	LOW		
Site Name	Gould & Lamb					
Site Address	101 Riverfront Boulevard					
Site Location	Southwest corner of the US 41 and Riverfront Boulevard intersection					
Distance/Direction	Adjacent / West					
Facility ID Nos:	SQG_66503					
Database Sources:	Hazardous Waste Generator					
Historical Land Use	Filled/reclaimed land from the Manatee River					
Current Land Use	Professional office building					
Contaminants	N/A					
TANKS	U/A	Capacity (gal)	Content	Installed	Removed	
n/a						
Discharge Date:	n/a		Cleanup Date:	n/a		
	Soil			Groundwater		
Documented/ Known Impacts:	No			No		

**PUBLIC RECORDS:** This is a former professional office building which once contained multiple medical and affiliated offices. No hazardous wastes are currently generated, and no violations or contamination impacts have been reported.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site was developed with a multi-story, multi-tenant professional office building. A restaurant was located to the north of the office building. Paved parking surrounded the structures. No hazardous materials or contamination impacts were observed.

**CONCLUSIONS:** Based on the lack of reported contamination impacts at the facility, the facility has been assigned a CRR of **Low**.

View of the multi-tenant professional office building, facing north.

Site No:	7		Risk Potential:	LOW		
Site Name	Palmetto Economic Enhancement District					
Site Address	Study Area					
Site Location	Study area					
Distance/Direction	Study Area					
Facility ID Nos:	BF411201000					
Database Sources:	Brownfield Area					
Historical Land Use	Various property uses					
Current Land Use	n/a					
Contaminants	N/A					
TANKS	U/A	Capacity (gal)	Content	Installed	Removed	
n/a						
Discharge Date:	n/a		Cleanup Date:	n/a		
	Soil			Groundwater		
Documented/ Known Impacts:	No			No		

**PUBLIC RECORDS:** The Palmetto Economic Enhancement District Brownfield Area encompasses a portion of the City of Palmetto, north of the Manatee River. The Brownfield Area appears to be designated for the economic redevelopment of the city and does not indicate specific potential for contamination within the study area that are discussed separately.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** n/a

**CONCLUSIONS:** Based on the lack of reported contamination impacts at the facility, the facility has been assigned a CRR of **Low**.

View of the portion of the Palmetto Economic Enhancement District within the study area boundaries, shaded, as shown on a 2022 aerial photograph from Google Earth.

Potential Contamination Site Summary

From Manatee River to Haben Boulevard PD&E STUDY

GEC Project No. 5485E

Financial Project ID 442630-1-22-01

Site No:	8		Risk Potential:	LOW		
Site Name	102 1st Street East Property					
Site Address	102 1st Street East					
Site Location	Northeast corner of the US 41 and 1st Street East intersection					
Distance/Direction	Adjacent / East					
Facility ID Nos:	n/a					
Database Sources:	Brownfield Area					
Historical Land Use	Vacant land					
Current Land Use	Vacant, grassed land					
Contaminants	N/A					
TANKS	U/A	Capacity (gal)	Content	Installed	Removed	
n/a						
Discharge Date:	n/a		Cleanup Date:	n/a		
	Soil			Groundwater		
Documented/ Known Impacts:	No			No		

**PUBLIC RECORDS:** A Phase I Environmental Site Assessment was conducted at this property in 2018 and no Recognized Environmental Concerns were identified. The property has historically been undeveloped, vacant land with no apparent uses. No obvious indications of contamination impacts were identified.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The property consisted of grassed and vacant land with no apparent current uses. No hazardous materials or contamination impacts were observed.

**CONCLUSIONS:** Based on the lack of reported contamination impacts at the facility, the facility has been assigned a CRR of **Low**.

View of the vacant property, facing north.

Site No:	9		Risk Potential:	MEDIUM		
Site Name	7-Eleven Food Store No. 33110					
Site Address	208 US Highway 41					
Site Location	Southeast corner of the US 41 and Haben Boulevard intersection					
Distance/Direction	Adjacent / East					
Facility ID Nos:	9804045					
Database Sources:	UST, LUST, RCRA-VSQG, DWM Contamination					
Historical Land Use	Vacant land					
Current Land Use	Gas station and convenience store					
Contaminants	Hazardous Materials and Petroleum Products					
TANKS	U/A	Capacity (gal)	Content	Installed	Removed	
1	U	15,000	Unleaded Gasoline	7-1-01	In Use	
1	U	10,000	Unleaded Gasoline	7-1-01	In Use	
1	U	10,000	Vehicular Diesel	7-1-01	In Use	
Discharge Date:	2-16-04		Cleanup Date:	2-22-08		
	Soil			Groundwater		
Documented/ Known Impacts:	No			No		

**PUBLIC RECORDS:** A discharge was reported in February 2004 during replacement of storage tank fill port components. Soil and groundwater sampling and testing was conducted in August 2004, and no contamination impacts were detected above applicable target levels. FDEP approved a Site Rehabilitation Completion Order closure order on February 22, 2008. No other impacts have been reported.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site was developed with an operating 7-Eleven gas station and convenience store.

**CONCLUSIONS:** Due to the facility being an operating gas station adjacent to the roadway, the facility has been assigned a CRR of **Medium**, despite no on-going contamination impacts.

View of the existing gas station from the northwest corner of the facility, facing southeast.

Potential Contamination Site Summary

Documented/ Known Impacts:	No			No		

**PUBLIC RECORDS:** A 2011 Asbestos and Protective Coatings Survey Report, provided by HNTB detailed the sampling of potential asbestos-containing materials and areas of potential lead-based paint. No lead-based paint materials which met EPA's definition were detected. Three asbestos samples obtained from one homogenous area were determined to contain asbestos. Additionally, this material, black tar paper located between end bents and bridge decking, was determined in the field to be friable, indicating it would require special handling during the eventual demolition of the bridge.

**INTERVIEW INFORMATION:** n/a

**SITE OBSERVATIONS:** The site was developed with the US Highway 41 travel lanes, including the bridge over the Manatee River.

**CONCLUSIONS:** Due to the bridge containing areas of asbestos-containing materials requiring special handling during the proposed bridge demolition, the facility has been assigned a CRR of **High**.

View of the completed bridge shown on the 1970 aerial photograph, with north on the right side of the photograph.

Table 5  
Aerial Photograph Review Summary  
**US 41/301 (Tamiami Trail/1st St. East) Bridge over Manatee River**

FPID No. 442630-1-22-01  
GEC Project No. 5485E

Site No.	Site Name	Site Address	Year First Observed in Aerial Photographs	Comments
1	Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245	520 1st Street West	1970	From prior to 1951 through at least 1957, the site was developed with a single family residence. A filling station was visible from 1970 through 2003. The current retail building was first visible in the 2012 aerial photograph.
2	Gulfcoast Family Practice	202 Manatee Avenue East	1970	The current medical office building was first visible in the 1970 aerial photograph and has remained generally unchanged.
3	Historical Gas Station	101 Manatee Avenue West	1995	The location is not clearly visible on the 1951 through 1980 aerial photographs due to poor resolution, though a structure was generally visible. From 1995 through 2003, the site was developed with a fast food restaurant, and appeared vacant and undeveloped in 2012. The current self-storage facility was visible in 2022.
4	The Bradenton Herald	102 Manatee Avenue East	1995	The area of the former Bradenton Herald facility was occupied by a smaller citrus grove in 1951. From 1957 through 1980, the land was vacant and vegetated. The Herald building was visible from 1995 through 2012. The land was vacant in 2018, and the current apartments were completed by 2022.
5	Manatee Memorial Hospital	206 2nd Street East	1957	A portion of the Manatee Memorial Hospital was first visible in the 1957 aerial photograph, along with affiliated parking areas. The hospital was expanded in 1970 and the early 1990s.
6	Gould & Lamb	101 Riverfront Boulevard	1995	The area on which this facility is located was developed as reclaimed land from the Manatee River in the 1950s. The land was vacant from 1957 through 1980, and appeared developed with the current structure by 1995.
7	Palmetto Economic Enhancement District	Study Area	n/a	This area is located north of the Manatee River. The study area appeared sparsely developed from 1957 through 2003, when the 7-Eleven gas station (Site No. 9) and Manatee County Convention Center were visible.
8	102 1st Street East Property	102 1st Street East	2003	The site has been vacant, undeveloped land through 2003, when the area appeared as a cleared and graded commercial outparcel. In 2012, a small apparent unpaved parking area is visible on the site, though no structures are visible. An area of disturbed soil mounding is visible to the north of the cleared area and is likely spoils from when the area was cleared and graded for the lot.
9	7-Eleven Food Store No. 33110	208 US Highway 41	2003	The site was vacant, undeveloped land through approximately 2003, when the current gas station and convenience store were first visible on aerial photographs.
10	US Highway 41 Bridge over the Manatee River (Bridge No. 130053)	US Highway 41	1957	The bridge appeared under construction in the 1957 aerial photograph and was completed by 1970.

Site No.	Site Name	Site Address	Year	Facility Type
1	Botts Standard Service Station, Chevron-McNitt Foodmart, CVS Pharmacy #5245	520 1st Street West	1922-1966	Vacant land on a residential parcel from 1922 through 1948. Developed with a filling station in 1966. Gas tanks are not depicted.
2	Gulfcoast Family Practice	202 Manatee Avenue East	1966	Not shown until 1966, as a small office building.
3	The Bradenton Herald	102 Manatee Avenue West	1922-1966	Large single family residential parcel from 1926 through 1966.
4	Historical Gas Station	101 3rd Avenue West	1929	Vacant land or a residential parcel in 1922 and 1926. Developed with a filling station with 3 gas tanks in 1929. Vacant land in 1948.
5	Manatee Memorial Hospital	206 2nd Street East	1966	A portion of the existing hospital facility is shown in 1966.
6	Gould & Lamb	101 Riverfront Boulevard	n/a	Not shown on the maps.
7	Palmetto Economic Enhancement District	Study Area	n/a	n/a
8	102 1st Street East Property	102 1st Street East	n/a	Not shown on the maps.
9	7-Eleven Food Store No. 33110	208 US Highway 41	n/a	Not shown on the maps.
10	US Highway 41 Bridge over the Manatee River (Bridge No. 130053)	US Highway 41	n/a	Not shown on the maps.

## **APPENDIX B**

### **Definitions of Common Report Terms**

**DRAFT**

Aboveground Storage Tank (AST) - A storage tank that is situated on the ground surface and may or may not be installed on a concrete pad with secondary spill containment.

Active Remediation (AR) - Implementation of an approved Remedial Action Plan.

Contamination - The presence of any material or chemical contained within the soil, surface water, sediment, or groundwater on or adjacent to the project corridor, that may require assessment, remediation, or special handling, or that has a potential for liability.

Contamination Risk Rating (CRR) - Site risk rating system defined in of the FDOT PD&E Manual.

Engineering Control (EC) - A modification to a site to reduce or eliminate the potential for migration of, and exposure to, contaminants of concern. Examples of ECs include slurry walls, sheet pile walls, and engineered liners to prevent exposure.

Hazardous Material - Any solid, liquid, or gas that has the potential to harm people, other living organisms, property, or the environment, either by itself or through interaction with other factors. Hazardous material may be radioactive, flammable, explosive, toxic, corrosive, biohazardous, an oxidizer, an asphyxiant, a pathogen, an allergen, or may have other characteristics that render it hazardous in specific circumstances. These materials may threaten workers through occupational exposure and the general public in their homes, communities, and general environment. Exposure to these materials can occur near the site of generation, along the path of its transportation, or near their ultimate disposal sites. Hazardous materials are often subject to laws and regulations on the use and handling of such materials and may differ depending on the activity or status of the material.

Institutional Controls (IC) - A restriction on use of, or access to, a site to eliminate or minimize exposure to contaminants of concern. Examples of ICs include deed restrictions, use restrictions, or restrictive zoning.

Natural Attenuation Monitoring (NAM) - A means of conducting site rehabilitation in which natural degradation of media contaminants are monitored for extended periods of time provided that human health, public safety, and the environment are protected.

No Further Action with Conditions (CNFA) - No further assessment or remediation is required at a site provided that certain conditions are met as approved by the lead regulatory agency. Conditional No Further Actions can be granted to sites that employ ICs and/or ECs as part of the site rehabilitation strategy.

No Further Action without Conditions (NFA) - No further assessment or remediation is required at a site. No contaminants are present at the site above default or approved alternative clean-up standards.

Petroleum Products - Liquid crude oil derivatives that are derived by distillation, cracking, hydro forming and/or other petroleum refinery processes falling under the description of either "Gasoline Analytical Group," "Kerosene Analytical Group" or "Used Oil" as defined in Florida Administrative Code (FAC) 62-770.200(24), (29) and (64), respectively. These materials include, but are not limited to: leaded and unleaded gasoline, gasohol, aviation and jet fuels, diesel fuel, kerosene, new or used motor oil, hydraulic fluid, and gear oil.

Potential Hazardous Material or Petroleum Contamination Site - A potential hazardous material or petroleum contamination site is a parcel of land upon which hazardous materials or petroleum products are produced, stored, accumulated, used, or disposed of. These sites typically include existing or former gasoline stations, dry cleaners, auto repair facilities, and other businesses where hazardous substances or petroleum product are present. The presence of hazardous substances and/or petroleum products does not mean that contamination is present, but merely indicates that the potential for contamination exists if the materials are not handled or disposed of properly.

Remedial Action Plan (RAP) - A plan that details a means by which contamination may be cleaned up.

Site Assessment Report (SAR) - Summarizes all tasks that were implemented pursuant to the Contamination Assessment.

Site Rehabilitation Complete Report (SRCR) - A report that describes that cleanup goals have been met.

Site Rehabilitation Completion Order (SRCO) - An order issued by the lead regulatory agency that approves the SRCR. No further assessment or remediation activities need to be conducted at the site once an SRCO has been issued unless a new release is discovered.

Source Removal (SR) - The removal of free petroleum product or excessively contaminated soil.

Underground Storage Tank (UST) - A storage tank that has been installed below the ground surface that may or may not contain secondary containment or leak detection systems. The FDEP has compiled several database lists that are useful in identifying potential sources of hazardous material or petroleum product contamination.

## **APPENDIX C**

### **Contamination Risk Rating Descriptions**

**DRAFT**

The contamination potential risk rating system was developed by FOOT and is included in Part 2 of the PD&E Manual, dated July 1, 2023. The rating system incorporates four levels of risk:

- 1. No** - A review of available information on the property and a review of the conceptual or design plans indicates there is no potential contamination impact to the project. It is possible that contaminants have been handled on the property. However, findings from the Level I evaluation indicate that contamination impacts are not expected.
- 2. Low** - A review of available information indicates that past or current activities on the property have an ongoing contamination issue; the site has a hazardous waste generator identification (ID) number, or the site stores, handles, or manufactures hazardous materials. However, based on the review of conceptual or design plans and/or findings from the Level I evaluation, it is not likely that there would be any contamination impacts to the project.
- 3. Medium** - After a review of conceptual or design plans and findings from a Level I evaluation, a potential contamination impact to the project has been identified. If there is insufficient information (such as regulatory records or site historical documents) to make a determination as to the potential for contamination impact, and there is reasonable suspicion that contamination may exist, the property should be rated at least as a "Medium." Properties used historically as gasoline stations and which have not been evaluated or assessed by regulatory agencies, sites with abandoned in place underground petroleum storage tanks or currently operating gasoline stations should receive this rating.
- 4. High** - After a review of all available information and conceptual or design plans, there is appropriate analytical data that shows contamination will substantially impact construction activities, have implications to ROW acquisition or have other potential transfer of contamination related liability to the FDOT.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

### RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Geotechnical & Env. Cons., Inc  
919 Lake Baldwin Lane  
Orlando, FL 32814-0000  
Contact: Lisa Messing

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Geotechnical & Env. Cons., Inc were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

**Certified Sanborn Results:**

**Certification #** 5B73-4429-8094

Sanborn® Library search results

Certification #: 5B73-4429-8094

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

**Limited Permission To Make Copies**

Geotechnical & Env. Cons., Inc (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, LLC. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT.

ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT. Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

S. TAMIAMI TRAIL  
BRADENTON, FL 34208

#### COORDINATES

Latitude (North): 27.4952140 - 27° 29' 42.77"  
Longitude (West): 82.5630430 - 82° 33' 46.95"  
Universal Transverse Mercator: Zone 17  
UTM X (Meters): 345593.5  
UTM Y (Meters): 3042089.8  
Elevation: 13 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

## EXECUTIVE SUMMARY

### TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

### DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

### STANDARD ENVIRONMENTAL RECORDS

#### ***Lists of Federal NPL (Superfund) sites***

NPL..... National Priority List  
Proposed NPL..... Proposed National Priority List Sites  
NPL LIENS..... Federal Superfund Liens

#### ***Lists of Federal Delisted NPL sites***

Delisted NPL..... National Priority List Deletions

#### ***Lists of Federal sites subject to CERCLA removals and CERCLA orders***

FEDERAL FACILITY..... Federal Facility Site Information listing  
SEMS..... Superfund Enterprise Management System

#### ***Lists of Federal RCRA facilities undergoing Corrective Action***

CORRACTS..... Corrective Action Report

#### ***Lists of Federal RCRA TSD facilities***

RCRA-TSDF..... RCRA - Treatment, Storage and Disposal

#### ***Lists of Federal RCRA generators***

RCRA-LQG..... RCRA - Large Quantity Generators

#### ***Federal institutional controls / engineering controls registries***

LUCIS..... Land Use Control Information System  
US ENG CONTROLS..... Engineering Controls Sites List  
US INST CONTROLS..... Institutional Controls Sites List

#### ***Federal ERNS list***

ERNS..... Emergency Response Notification System

#### ***Lists of state- and tribal hazardous waste facilities***

SHWS..... Florida's State-Funded Action Sites

# EXECUTIVE SUMMARY

# EXECUTIVE SUMMARY

**EDR RECOVERED GOVERNMENT ARCHIVES**

***Exclusive Recovered Govt. Archives***

RGA HWS..... Recovered Government Archive State Hazardous Waste Facilities List  
 RGA LF..... Recovered Government Archive Solid Waste Facilities List

**SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

**STANDARD ENVIRONMENTAL RECORDS**

***Lists of Federal CERCLA sites with NFRAP***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 09/19/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Lists of Federal RCRA generators***

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/04/2023 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQQ: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQQ list, as provided by EDR, and dated 12/04/2023 has revealed that there are 5 RCRA-VSQQ sites within approximately 0.25 miles of the target property.

### ***Lists of state and tribal landfills and solid waste disposal facilities***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there are 3 SWF/LF sites within approximately 0.5 miles of the target property.

### ***Lists of state and tribal leaking storage tanks***

LAST: The file for Leaking Aboveground Storage Tanks. Please remember STCM does not track the source of the discharge so the agency provides a list of facilities with an aboveground tank and an open discharge split by facilities with aboveground tanks only and facilities with aboveground and underground tanks.

A review of the LAST list, as provided by EDR, and dated 10/23/2023 has revealed that there is 1 LAST site within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### ***Lists of state and tribal registered storage tanks***

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there are 15 UST sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal institutional control / engineering control registries**

ENG CONTROLS: The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce, contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

A review of the ENG CONTROLS list, as provided by EDR, and dated 08/11/2023 has revealed that there is 1 ENG CONTROLS site within approximately 0.5 miles of the target property.

### ***Lists of state and tribal brownfield sites***

**BROWNFIELDS:** Brownfields are defined by the Florida Department of Environmental Protection (FDEP) as abandoned, idled, or underused industrial and commercial facilities where expansion or redevelopment is complicated by real or perceived environmental contamination.

A review of the BROWNFIELDS list, as provided by EDR, has revealed that there are 11 BROWNFIELDS sites within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/04/2023 has revealed that there are 6 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

**FINDS:** The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 11/03/2023 has revealed that there are 2 FINDS sites within approximately 0.001 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 11/10/2023 has revealed that there are 20 HAZ WASTE sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

HW GEN: Small Quantity Hazardous Waste Generators are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities greater than 100 Kg but less than 1,000 Kg in any one calendar month. Large Quantity Generators of Hazardous Waste are tracked in this coverage based on their notification to the Department of Environmental Protection as to their handler status, or based on inspections conducted at their facilities. These facilities are regulated under the federal Resource Conservation and Recovery Act (RCRA) and applicable state regulations as generators of hazardous wastes in quantities equal to or greater than 1,000 Kg in any one calendar month.

A review of the HW GEN list, as provided by EDR, and dated 08/11/2023 has revealed that there is 1 HW GEN site within approximately 0.25 miles of the target property.

SITE INV SITES: Statewide coverage of Site Investigation Section (SIS) sites. Site Investigation is a Section within the Bureau of Waste Cleanup, Division of Waste Management. SIS provides technical support to FDEP District Waste Cleanup Programs and conducts contamination assessments throughout the state.

A review of the SITE INV SITES list, as provided by EDR, and dated 11/10/2023 has revealed that there

## EXECUTIVE SUMMARY

is 1 SITE INV SITES site within approximately 0.5 miles of the target property.

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there are 16 UST FINDER sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 23 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
BRADENTON GASIFICATI	INT W 6TH AVE AND WE	WSW 1/8 - 1/4 (0.159 mi.)	M57	258

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 2 EDR Hist Auto

## EXECUTIVE SUMMARY

sites within approximately 0.125 miles of the target property.

### EDR RECOVERED GOVERNMENT ARCHIVES

#### ***Exclusive Recovered Govt. Archives***

RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the Department of Environmental Protection in Florida.

A review of the RGA LUST list, as provided by EDR, has revealed that there are 3 RGA LUST sites within approximately 0.001 miles of the target property.

Environmental Interest/Information System:  
 The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.  
 The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

**Environmental Interest/Information System:**

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters,

if impacts had over-reached the property boundary and/or migrated via shallow groundwater. A limited Phase II ESA to investigate the area in close proximity to the discovered materials revealed no impacts above regulatory cleanup target levels for commercial properties. Limited soil impacts above residential direct-exposure criteria may warrant additional analyses if the soil is to be removed from the property.

Hazardous Waste Summary:

Waste Code:	D001
Waste Description:	Ignitable Waste
Waste Code:	D004
Waste Description:	Arsenic
Waste Code:	D006
Waste Description:	Cadmium
Waste Code:	D007
Waste Description:	Chromium
Waste Code:	D009
Waste Description:	Mercury
Waste Code:	D010
Waste Description:	Selenium
Waste Code:	D011
Waste Description:	Silver
Waste Code:	D013
Waste Description:	Lindane (1,2,3,4,5,6-Hexa-Chlorocyclohexane, Gamma Isomer)
Waste Code:	D018
Waste Description:	Benzene
Waste Code:	D024
Waste Description:	M-Cresol
Waste Code:	D026
Waste Description:	Cresol
Waste Code:	F003
Waste Description:	The Following Spent Nonhalogenated Solvents: Xylene, Acetone, Ethyl Acetate, Ethyl Benzene, Ethyl Ether, Methyl Isobutyl Ketone, N-Butyl Alcohol, Cyclohexanone, And Methanol; All Spent Solvent Mixtures/Blends Containing, Before Use, Only The Above Spent Nonhalogenated Solvents; And All Spent Solvent Mixtures/Blends Containing, Before Use, One Or More Of The Above Nonhalogenated Solvents, And A Total Of Ten Percent Or More (By Volume) Of One Or More Of Those Solvents Listed In F001, F002, F004, And F005; And Still Bottoms From The Recovery Of These Spent Solvents And Spent Solvent Mixtures.
Waste Code:	P001
Waste Description:	2h-1-Benzopyran-2-One, 4-Hydroxy-3-(3-Oxo-1-Phenylbutyl)-, & Salts, When Present At Concentrations Greater Than 0.3% (Or) Warfarin, & Salts, When Present At Concentrations Greater Than 0.3%

Waste Code:	P012
Waste Description:	Arsenic Oxide As <sub>2</sub> O <sub>3</sub> (Or) Arsenic Trioxide
Waste Code:	P188
Waste Description:	Benzoic Acid, 2-Hydroxy-, Compd. With (3a <i>s</i> -Cis)-1,2,3,3a,8,8a-Hexahydro-1,3a,8-Trimethylpyrrolo[2,3-B]Indol-5-Yl Methylcarbamate Ester (1:1) (Or) Physostigmine Salicylate
Waste Code:	U010
Waste Description:	Azirino [2',3':3,4]Pyrrolo[1,2-A]Indole-4,7-Dione, 6-Amino-8-[[Aminocarbonyl]Oxy]Methyl]-1,1a,2,8,8a,8b-Hexahydro-8a-Methoxy-5-Methyl-, [1 <i>as</i> -(1 <i>alpha</i> , 8 <i>beta</i> , 8 <i>alpha</i> , 8 <i>beta</i> )]- (Or) Mitomycin C
Waste Code:	U035
Waste Description:	Benzenebutanoic Acid, 4-[Bis(2-Chloroethyl)Amino]- (Or) Chlorambucil
Waste Code:	U058
Waste Description:	2 <i>h</i> -1,3,2-Oxazaphosphorin-2-Amine, N,N-Bis(2-Chloroethyl)Tetrahydro-, 2-Oxide (Or) Cyclophosphamide
Waste Code:	U059
Waste Description:	5,12-Naphthacenedione, 8-Acetyl-10-[(3-Amino-2,3,6-Trideoxy)-Alpha-L-Lyxohexopyranosyl]Oxy]-7,8,9,10-Tetrahydro-6,8,11-Trihydroxy-1-Methoxy-, (8 <i>s</i> -Cis)- (Or) Daunomycin
Waste Code:	U129
Waste Description:	Cyclohexane, 1,2,3,4,5,6-Hexachloro-, (1 <i>alpha</i> , 2 <i>alpha</i> , 3 <i>beta</i> , 4 <i>alpha</i> , 5 <i>alpha</i> , 6 <i>beta</i> )- (Or) Lindane
Waste Code:	U132
Waste Description:	Hexachlorophene (Or) Phenol, 2,2'-Methylenebis[3,4,6-Trichloro-
Waste Code:	U150
Waste Description:	L-Phenylalanine, 4-[Bis(2-Chloroethyl)Amino]- (Or) Melphalan
Waste Code:	U188
Waste Description:	Phenol
Waste Code:	U239
Waste Description:	Benzene, Dimethyl- (I,T) (Or) Xylene (I)

**Environmental Interest/Information System:**

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

## Environmental Interest/Information System:

The Florida Integrated Environmental System Today (FIESTA) Data Maintenance (FDM) System maintains entity, environmental interest, and affiliation data.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

**Highlights:**

A Phase I ESA completed in June 2017 per ASTM E1527-13 revealed RECs associated with historical on-site land use (retail gas sales and auto repair), as well as the potential for unregistered/unregulated abandoned USTs. Previous limited assessment data suggests impacts remain associated with one recorded discharge. A Phase II ESA completed in October 2017 revealed residual dissolved-phase petroleum impacts associated with a former gasoline UST system. A dissolved-phase VOC impact was discovered in close proximity to the west boundary of the site (unknown origin). Supplemental groundwater assessment was recommended. Supplemental sampling conducted in April-May 2018 revealed dissolved-phase Benzene concentrations near the east boundary of the site. These impacts may be eligible for State-funded assessment/cleanup. All impacts are below the current Natural Attenuation Default Criteria; as such, no active remediation is required or recommended as of the date of the supplemental assessment report (June 5, 2018) Former Use: Retail gasoline sales and auto service 1973 - 1999. Trailer and automotive sales 2006 - present.

Name: PALMETTO - COVEY TRAILER SITE  
 Address: 711 US HIGHWAY 301  
 Recipient name: Manatee County Board of Commissioners  
 Grant type: Assessment  
 Property Number: 2603800109  
 Parcel size: 0.6  
 Latitude: 27.517879199999999  
 Longitude: -82.563656499999993  
 Highlights: A Phase I ESA completed in June 2017 per ASTM E1527-13 revealed RECs associated with historical on-site land use (retail gas sales and auto repair), as well as the potential for unregistered/unregulated abandoned USTs. Previous limited assessment data suggests impacts remain associated with one recorded discharge. A Phase II ESA completed in October 2017 revealed residual dissolved-phase petroleum impacts associated with a former gasoline UST system. A dissolved-phase VOC impact was discovered in close proximity to the west boundary of the site (unknown origin). Supplemental groundwater assessment was recommended. Supplemental sampling conducted in April-May 2018 revealed dissolved-phase Benzene concentrations near the east boundary of the site. These impacts may be eligible for State-funded assessment/cleanup. All impacts are below the current

US BROWNFIELDS:

Name: 9TH AVENUE EAST PROPERTIES  
 Address: 214 - 228 9TH AVENUE EAST/MLK  
 Recipient name: Manatee County Board of Commissioners  
 Grant type: Assessment  
 Property Number: 4619500004, 4619400007, 4612700007, 4612300006, 4612100000  
 Parcel size: 0.9  
 Latitude: 27.491499999999998  
 Longitude: -82.561499999999998  
 Highlights: A Phase I ESA completed in April 2012 per ASTM E1527-05 has revealed RECs associated with the site. These include the historical presence of an on-site cleaning facility (hat cleaners) and a nearby historical petroleum storage facility (within 300 feet). A Phase 2 ESA completed in August 2012 revealed no impacts to soil or groundwater above regulatory criteria. As such, no additional assessment was recommended. Former Use: Historical land use has included primarily residential use. However, one parcel of the site was used for commercial purposes for many years; including a hat cleaner operation.

Name: FORMER CHEMISTRY HALL LABS  
 Address: 650 E 6TH AVENUE  
 Recipient name: Manatee County Board of Commissioners  
 Grant type: Assessment  
 Property Number: 3176700007  
 Parcel size: 1.7  
 Latitude: 27.493545000000001  
 Longitude: -82.557050000000004  
 Highlights: A Phase I ESA completed in December 2017 revealed RECs associated with site's former use (pesticide manufacturer), as well as adjacent concerns that included documented arsenic impacts to groundwater, and the historical presence of a diesel UST in close proximity to the subject site boundary. A Phase II ESA was started (QAPP completed and geophysical investigation commenced); but then cancelled by the site owner. No soil or groundwater samples were collected. Former Use: Historical use included residential up until the 1950's; then used as a chemical laboratory from approximately 1955 - 1980.

Name: LOVE APARTMENTS SITE  
 Address: 614 10TH AVE E 908 6TH ST CT E & 619 11TH AVE E  
 Recipient name: Manatee County Board of Commissioners  
 Grant type: Assessment  
 Property Number: 4593300009, 4596700007, and 4597200007  
 Parcel size: 1.59  
 Latitude: 27.490759300000001  
 Longitude: -82.557499000000007  
 Highlights: A Phase I ESA completed in April 2017 revealed no direct evidence of RECs associated with the property. A limited asbestos survey found ACMs that will require special handling as part of demolition planned for the apartment complex (non-friable in good condition if no demo occurs). Former Use: Residential with historical school within the south half.

Unemployed Percent:	7.97
Name:	LOVE APARTMENTS SITE
Address:	614 10TH AVE E 908 6TH ST CT E & 619 11TH AVE E
Recipient name:	Manatee County Board of Commissioners
Grant type:	Assessment
Property Number:	4593300009, 4596700007, and 4597200007
Parcel size:	1.59
Latitude:	27.490759300000001
Longitude:	-82.557499000000007
Highlights:	A Phase I ESA completed in April 2017 revealed no direct evidence of RECs associated with the property. A limited asbestos survey found ACMs that will require special handling as part of demolition planned for the apartment complex (non-friable in good condition if no demo occurs). Former Use: Residential with historical school within the south half.

Name: BRADENTON - 720 9TH STREET  
 Address: 720 9TH STREET EAST  
 Recipient name: Sarasota Manatee Metropolitan Planning Organization  
 Grant type: Assessment  
 Property Number: 3143900003, 3142810005, 3141600109. 3176600059  
 Parcel size: 6.26  
 Latitude: 27.493366000000002  
 Longitude: -82.555617999999996  
 Highlights: Based on a Phase I ESA completed in 2012, RECs have been identified related to the site's historical land uses (petroleum storage facility, railroads) and adjacent properties (historical dry cleaner, and auto repair facilities). As of September 2014, there's a strong potential for development of this under-utilized property for affordable housing by Blue Sky Communities of Tampa, Florida. Funding is anticipated in the range of 17.5 million. Former Use: Historical use has included railroads and associated warehouse structures, and a bulk fuel/refining facility.

 Latitude: 27.487500000000001  
 Longitude: -82.563800000000001  
 Highlights: In 2012, a Phase 2 ESA was performed to address potential impacts associated with historical on and off-site land uses. Results of the investigation revealed only minor exceedances arsenic as compared to the State cleanup criteria for groundwater from monitor wells installed near the general south edge of the property next to railroad tracks. Combined with a low-level impact of TRPH, the impacts have been attributed to an off-site source (the railroad). As such, it would be prudent for the site owner to consider an insitutional control (i.e. covenant/deed restriction) to prohibit the use of on-site groundwater for potable uses. Former Use: Historical land use has been primarily for recreational/community center/hall purposes.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS*****Lists of Federal NPL (Superfund) sites*****NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

**Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/26/2023	Source: EPA

**NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

***Lists of Federal Delisted NPL sites*****Delisted NPL: National Priority List Deletions**

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**SEMS: Superfund Enterprise Management System**

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 09/19/2023

 Data Release Frequency: Quarterly

***Lists of Federal CERCLA sites with NFRAP*****SEMS-ARCHIVE: Superfund Enterprise Management System Archive**

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING**

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 09/19/2023	Source: EPA
Date Data Arrived at EDR: 10/03/2023	Telephone: 800-424-9346

***Lists of Federal RCRA TSD facilities***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (404) 562-8651
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 12/06/2023

***Lists of Federal RCRA generators***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (404) 562-8651
Date Made Active in Reports: 12/12/2023	Last EDR Contact: 12/06/2023

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING****RCRA-SQG: RCRA - Small Quantity Generators**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/04/2023	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/06/2023	Telephone: (404) 562-8651

**RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

**BROWNFIELDS AREAS: Brownfields Areas Database**

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

**BSRA: Brownfield Site Rehabilitation Agreements Listing**

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans.

It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

**ADDITIONAL ENVIRONMENTAL RECORDS****Local Brownfield lists**

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING****US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

**US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

**EPA WATCH LIST: EPA WATCH LIST**

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

**2020 COR ACTION: 2020 Corrective Action Program List**

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING****RMP: Risk Management Plans**

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

**RAATS: RCRA Administrative Action Tracking System**

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

**HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing**

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

	Data Release Frequency: Varies

**UMTRA:** Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

**US AIRS (AFS):** Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

**ABANDONED MINES: Abandoned Mines**

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

**PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing**

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST\_HANDLING\_INSTR), Non-hazardous waste description (NON\_HAZ\_WASTE\_DESCRIPTION), DOT printed information (DOT\_PRINTED\_INFORMATION), Waste line handling instructions (WASTE\_LINE\_HANDLING\_INSTR), Waste residue comments (WASTE\_RESIDUE\_COMMENTS).

**PFAS NPDES: Clean Water Act Discharge Monitoring Information**

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

**PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing**

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

**PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing**

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

**AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing**

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

**FL Cattle Dip. Vats: Cattle Dipping Vats**

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

**UST FINDER: UST Finder Database**

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories. UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING****EDR HIGH RISK HISTORICAL RECORDS*****EDR Exclusive Records*****EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

**EDR Hist Auto: EDR Exclusive Historical Auto Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING****DADE MOP: Marine Facilities Operating Permit**

What is this permit used for? Miami-Dade County Ordinance 89-104 and Section 24-18 of the Code of Miami-Dade County require the following types of marine facilities to obtain annual operating permits from DERM: All recreational boat docking facilities with ten (10) or more boat slips, moorings, davit spaces, and vessel tie-up spaces. All boat storage facilities contiguous to tidal waters in Miami-Dade County with ten (10) or more dry storage spaces including boatyards and boat manufacturing facilities.

**OTHER DATABASE(S)**

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

## FDEP Database List

DRAFT

The FDEP databases used for this study and their common abbreviations are listed below.

- Florida's State Funded Action Sites (SHWS),
- Florida Sites List – (FL Sites),
- State Brownfield Sites Listing (Brownfields),
- Cattle Dip Vats (CDV),
- Ethylene Di-Bromide Database (EDB),
- Dry Cleaners (DRYCLEANERS),
- Priority Cleaners (PRIORITY CLEANERS),
- Dry Cleaning Solvent Program Cleanup Sites (SCRD DRYCLEANERS),
- State & Federal Institutional Controls Registry (ENG CONTROLS),
- State & Federal Institutional Controls Registry (INST CONTROLS),
- Voluntary Cleanup Priority Listing (INDIAN VCP),
- Voluntary Cleanup Sites (VCP),
- Historical Dry Cleaners (EDR HIST CLEANERS),
- Leaking Aboveground Storage Tank Listing (LAST),
- Leaking Underground Storage Tank Listing (LUST),
- Leaking Underground Storage Tanks on Indian Land (INDIAN LUST),
- Underground Storage Tanks on Indian Land (INDIAN UST),
- National Pollution Discharge Elimination System Facilities (NPDES),
- Oil and Hazardous Materials Incidents (SPILLS, SPILLS 80, SPILLS 90),
- Solid Waste Facilities (SWF),
- Underground Storage Tanks (UST),
- Aboveground Storage Tanks (AST),
- Underground Injection Control Wells (UIC),
- Voluntary Cleanup Sites (VCS), and
- NPL and State Funded Waste Cleanup Sites (NPL).

Information regarding the date the databases were last updated are included within the EDR Radius Map Report provided in **Appendix E**. Descriptions of the above-listed Florida databases and information sources are also provided in the EDR report.

## APPENDIX G

### Federal Database List

DRAFT

Federal databases have been compiled for identifying potential sources of hazardous materials contamination. The databases used for this evaluation include:

- Aerometric Information Retrieval System I Air Facility Subsystem (AIRS),
- Clandestine Drug Laboratory Locations (CDL),
- National Clandestine Laboratory Register (HIST CDL),
- Comprehensive Environmental Response, Compensation & Liability Information System (CERCLIS),
- Delisted National Priorities List (DELISTED NPL),
- Comprehensive Environmental Response, Compensation & Liability Information System No Further Remedial Action Planned (CERC-NFRAP),
- Comprehensive Environmental Response, Compensation & Liability Information System Lien Information (LIENS 2),
- Superfund (CERCLA) Consent Decrees (CONSENT),
- Corrective Action Report (CORRACTS),
- Incident and Accident Data (DOT OPS),
- Engineering Controls Site List (US ENG Controls),
- Sites with Institutional Controls (US INST Controls),
- Land Use Control Information System (LUCIS),
- Federal Facility Site Information Listing (Federal Facility),
- Emergency Response Notification System Facility Registry System (ERNS),
- Hazardous Materials Incident Reporting System (HMIRS),
- Open Dump Inventory (ODI),
- Recycling Centers (SWRCY),
- Government Archives LUST (RGA LUST),
- DWM Contaminated Sites (DWM CONTAM),
- Resource Conservation & Recovery Act- Large Quantity Generators (RCRA - LQG),
- Resource Conservation & Recovery Act- Small Quantity Generators (RCRA - SQG),
- Resource Conservation & Recovery Act- Generator Conditionally Exempt Small Quantity Generator Facilities (RCRA-CESQG),
- Resource Conservation & Recovery Act- Non- Generator Facilities (RCRA Non Gen),
- Resource Conservation & Recovery Act- Treatment, Storage & Disposal Facilities (RCRA-TSDF),
- Toxic Substance Control Act Inventory (TSCA),
- Open Dump Inventory On Tribal Lands (INDIAN ODI),
- Indian Reservations (INDIAN RESERV),
- Department Of Defense Sites (DOD),
- Formerly Used Defense Sites (FUDES),
- National Priorities List (NPL),

- Proposed National Priorities List (Proposed NPL),
- National Priorities List Liens (NPL Liens),
- Delisted National Priorities List (Delisted NPL),
- Resource Conservation & Recovery Act-Corrective Action Facilities (CORRACTS), and
- Record of Decision System (ROD).

Information regarding the date the databases were last updated are included within the EDR Radius Map Report provided in **Appendix E**. Descriptions of the above-listed federal databases and information sources are also provided in the EDR report.

**ATTENTION:** Mr. Don Sicking

---

Dear Mr. Sicking:

Andreyev Engineering, Inc. has completed the Limited Closure Assessment for the subject site. The tank closure activities were conducted in accordance with our proposal, dated December 31, 2002.

Two copies of this report will be sent to Manatee County Environmental Management, 202 Sixth Avenue, East Bradenton, Florida 34208.

Should you have questions or require additional information, please do not hesitate to contact our office at (727) 527-5735.

Sincerely,

**ANDREYEV ENGINEERING, INC.**

Fla. Registration No.57434

## 1.0 INTRODUCTION AND PURPOSE

On February 13, 2003, Andreyev Engineering, Inc. (AEI) was authorized by Mr. Don Sicking of Pat Cook Construction, to conduct a Limited Tank Closure Assessment at the subject site. The purpose of the tank closure activities was to remove six (6) underground petroleum storage tanks (USTs). The following is a summary of the activities conducted:

### Tank Removal Activities.

1. On March 3, 2003, one (1) 10,000 gallon diesel fiberglass UST was removed by Petropac.
2. On March 4, 2003, three (3) 10,000 gallon gasoline fiberglass USTs were removed by Petropac.
3. During the removal of the diesel UST on March 3, 2003, two (2) 2,500 gallon steel USTs were discovered. These tanks were abandoned in-place and filled with concrete. These tanks were not registered with the FDEP and were removed by Petropac on March 10, 2003.

## 2.0 SITE DESCRIPTION

### 2.1 Site Location and Description

The subject site consists of approximately 0.6 acres of land formerly developed with a Chevron gas station and food mart. The gas station building was removed for redevelopment purposes. The site is located at 520 First Street, West, Bradenton, Manatee County, Florida. The site lies entirely in Section 26, Township 34 South, Range 17 East.

### 2.2 Storage Tank Information

The subject of this report are six (6) underground tanks. The tanks were located on the south and west sides of the former filling station building. The tanks formerly supplied gasoline and diesel to six (6) dispensers formerly located on the north and south sides of the former filling station building. The approximate locations of the USTs are shown on **Figure 1**.

On March 4, 2003 and March 10, 2003, AEI personnel were on-site to observe the removal of the five gasoline USTs. Photographs of the excavation activities are included in **Appendix A**.

### 3.0 TANK CLOSURE ACTIVITIES

#### 3.1 Removal of Residual Fuel and Tank Cleaning

On March 3, 2003, one 10,000-gallon diesel UST and three 10,000-gallon gasoline USTs were emptied and cleaned by Pertopac, Pollutant Specialty Contractor License# 045028. All residual gasoline and diesel sludge was removed from the fiberglass USTs. Approximately 850 gallons of liquids were removed from the fiberglass USTs. The tanks were degassed prior to removal.

#### 3.2 Tank Removal

The three 10,000 gallon gasoline USTs were located in the same pit, parallel to each other, in the western portion of the subject site. The 10,000 gallon diesel UST was located on the southern portion of the subject site. The two unregistered steel USTs were located to the north of the diesel UST and were perpendicular to this tank. The fiberglass USTs were in good condition with no visible damage. The two steel tanks had been filled with concrete during previous closure activities. The steel tanks were ripped open and the concrete jack hammered and removed. All associated piping was removed at this time. The dispensers were removed prior to AEI's site visit. The four fiberglass tanks were crushed and loaded into a solid waste dumpster and landfilled. The metal tanks were transported to Scrap-All of Sarasota. Disposal manifests for the tanks are included in **Appendix B**.

## 1.0 INTRODUCTION AND PURPOSE

The objective of this assessment was to evaluate the presence of petroleum contaminated groundwater within and down gradient of the former gasoline UST area on-site and to evaluate the presence of petroleum contaminated soils within the former UST area. The following summary of activities completed is provided:

- **Monitoring Well Installation:** Five (5) temporary monitoring wells (TMW-1 through TMW-5) were installed to determine the presence of dissolved hydrocarbons. The monitoring wells were installed to depths of between 10 and 12 feet below the ground surface in and around the former UST area.
- **Soil Sampling:** A total of eleven (11) soil borings were conducted to depths of 9 feet below the ground surface in and around the former gasoline UST area. During the drilling of the borings, soil samples were collected for field screening using an organic vapor analyzer (OVA). In addition, a single soil sample was collected and analyzed for EPA Methods 8100, 8021 and FL-PRO parameters.
- **Groundwater Sampling:** Groundwater samples were collected from monitoring wells TMW-1 through TMW-5 on April 7 and 12, 2004, for laboratory analyses. The samples collected were analyzed for EPA Method 8021, 8100, FL-Pro and lead parameters. The sampling activities were conducted in accordance with procedures and methods detailed in the FDEP's Standard Operating Procedure SOP-001/01.
- **Groundwater and Soil Laboratory Analyses:** Laboratory analyses for the April 7 and 12, 2004, sampling events were conducted by PC&B Environmental Laboratories in Oviedo, Florida.
- **Groundwater Flow Determination:** Water level measurements were obtained from four temporary monitoring wells on April 7, 2004 in order to determine the shallow groundwater flow direction at the site.
- **Summary of Results:** The laboratory analytical results were reviewed and summarized with respect to guidance concentrations specified in Chapters 62-550, 62-770 and 62-777, FAC.

## 2.0 SITE LOCATION AND DESCRIPTION

### 2.1 Site Location and Description

The subject site consists of commercial property currently developed with a single-story Eckerd Drug Store and associated paved parking areas. The site is located at 520 First Street West in Bradenton, Manatee County, Florida. The site lies entirely in Section 26, Township 34 South, Range 17 East, as shown on the "Bradenton, Florida " USGS Map, included as **Figure 1**.

### 2.2 Site Background

The McNitt Chevron facility formerly operated as a retail gasoline distributor located at 520 First Street West in Bradenton, Florida. The gas station building was demolished and the USTs removed in March, 2003. This facility utilized three (3) 10,000 gallon gasoline fiberglass USTs and one (1) 10,000 gallon diesel fiberglass UST. These tanks were removed on March 3 and 4, 2003. In addition, two (2) 2,500 gallon steel USTs formerly closed in place and filled with concrete were removed from this facility on March 10, 2003. The gasoline USTs were located to the south of the current Eckerd building. A copy of the Limited Closure Assessment Report is included as **Appendix A**.

The McNitt Chevron facility reported a petroleum discharge on May 9, 1990 based on petroleum odors detected in compliance wells during an annual compliance inspection. This facility applied to the State's Petroleum Cleanup Participation (PCP) program and was determined eligible on May 21, 2001. Groundwater sampling associated with an On-Site Environmental Audit (OSEA) performed in December of 1994, included analysis of twelve on-site monitoring wells. Based on the results of this analysis, elevated levels of ethylbenzene and zylenes were detected in monitoring well MW-9, located on the southeastern portion of the subject site. The levels of ethylbenzene and zylenes exceeded the FDEP Groundwater Cleanup Target Levels (GCTLs).

Additional groundwater sampling was conducted at this facility by CBM Environmental Services, Inc. in March of 2002. A total of twelve on-site monitoring wells were sampled for various petroleum constituents. The results of laboratory analysis on the collected groundwater samples indicated levels of methyl-tert-butyl-ether (MTBE) of 7.65 and 56.9 ug/L in monitoring wells CW-1 and CW-2, respectively, located to the north of the gasoline UST area. The FDEP GCTL for MTBE is 50 ug/L. There were no other wells sampled which detected contaminant levels which exceeded the GCTLs. A copy of the Groundwater Sampling Report is included as **Appendix B**.

### 3.0 ASSESSMENT METHODOLOGY AND RESULTS

#### 3.1 Soil Sampling and Analysis Results

In order to investigate the presence of petroleum impacted soils a total of eleven (11) shallow soil borings (SB-1 through SB-11) were conducted in and around the former gasoline UST area on April 7 and 12, 2004. Samples were collected on 1 foot intervals using a decontaminated 3-½ inch decontaminated hand auger. The groundwater was encountered at about 6.0 to 9.0 feet below the surface. The samples were field screened for the presence of hydrocarbon vapors with a calibrated Heathtech Detecto-Pak III Organic Vapor Analyzer (OVA). Soil samples exhibiting an OVA response greater than 10 parts per million were also screened for methane from the original sample container using an in-line carbon filter. The soils collected were also visually screened for petroleum staining. The locations of the borings are shown on **Figure 2**. The OVA soil screening activities were conducted to assess the presence of excessively contaminated soil on-site. There were no soils analyzed that produced OVA readings which exceeded background levels (10 ppm). The OVA results are summarized in **Table 1**.

During the headspace screening a single soil sample was collected for laboratory analysis in order to confirm the OVA results. The sample was collected from soil boring SB-2 at a depth of about 8 feet below the ground surface based on positive OVA readings (5 ppm) which were detected at this location. The soil sample was collected in accordance with procedures and methods detailed in the FDEP's Standard Operating Procedure SOP-001/01. The laboratory analyses were performed by PC&B Environmental Laboratories, Inc. in Oviedo, Florida for EPA Method 8100, 8021 and FL-PRO parameters. Based on the soil analysis results, there were no EPA Method 8100, 8021 or FL-PRO parameters detected which exceeded the laboratory detection limits. The soil analytical data is summarized on **Table 2** and a copy of the laboratory report is included in **Appendix C**.

#### 3.2 Monitoring Well Installation

Temporary monitoring wells TMW-1 through TMW-4 were installed by AEI on April 7, 2004 around the perimeter of the former UST area. Temporary monitoring well TMW-5 was installed by AEI on April 12, 2004 in the center of the former UST area. The monitoring wells were installed to depths of between 10 and 12 feet, and constructed with flush joint, 2-inch diameter, Schedule 40 PVC coupled to five feet of .010-inch slotted well screen. The installation of TMW-1 through TMW-4 was performed with a 3-½ inch decontaminated hand auger and the installation of monitoring well TMW-5 was performed with a drill rig using 4-¼ inch I.D. hollowstem augers, without the use of drilling mud. The annular space was filled with a 20/30 silica sand pack filter pack. Upon completion of groundwater sampling the wells were removed and the boreholes backfilled to land surface. During the monitoring well installation activities, the shallow groundwater was encountered at depths of between 6 and 9 feet below the surface. The approximate locations of monitoring wells TMW-1 through TMW-5 are shown in **Figure 3**. Monitoring well construction details are shown on **Figures 4 and 5**.

### 3.3 Groundwater Elevation Survey and Flow Determination

Upon completion of the installation of monitoring wells TMW-1 through TMW-4, a groundwater elevation survey was completed. The top-of-casings of all wells were surveyed using a datum set at a temporary bench mark set in the parking area. The bench mark elevation was set to an arbitrary value of 10.00 feet. In order to determine the direction of groundwater flow, water levels were measured in each of the monitoring wells to the top-of-casings to the nearest hundredth of a foot with a water level indicator. Based on the water level measurements obtained on April 7, 2004, the groundwater flow direction at the site is generally in an east-northeast direction. The April 7, 2004, groundwater elevation data is summarized on **Table 3** and shown on **Figure 6**.

### 3.4 Groundwater Sampling and Analyses Results

Groundwater sampling was conducted by AEI on April 7 and 12, 2004, in accordance with procedures and methods detailed in the FDEP's Standard Operating Procedure SOP-001/01. The groundwater laboratory analyses were performed by PC&B Environmental Laboratories, Inc. in Oviedo, Florida for EPA Method 8021, 8100, FL-Pro and lead parameters. Standard field methodologies require that at least three well volumes of water be purged from the well prior to sampling. Field parameters, including pH, conductivity, turbidity, dissolved oxygen and temperature, were recorded at various intervals during the purging of each well. Samples were collected after at least three well volumes were purged and the field parameters had stabilized. This methodology indicates that groundwater samples collected are representative of aquifer conditions. All samples were collected with a peristaltic pump. The EPA Method 8021 samples were collected from the inlet hose prior to the groundwater entering the pump. The groundwater analytical data is summarized on **Table 4** and a copy of the laboratory report is included in **Appendix C**.

The groundwater samples collected from monitoring wells TMW-1 through TMW-5 detected no EPA method 8021, 8100, FL-Pro or lead parameters which exceeded the laboratory detection limits. A copy of the groundwater sampling logs is included in **Appendix D**.

#### **4.0 CONCLUSIONS AND RECOMMENDATIONS**

Based on the results of this study no detectable levels of dissolved hydrocarbons were detected in monitoring wells TMW-1 through TMW-5, installed in and around former tank area, in April of 2004. In addition, no evidence of petroleum impacted soils was detected in the former UST area.

##### **4.1 Source Identification and Excessively Contaminated Soil Evaluation**

In order to investigate the presence of petroleum impacted soils a total of eleven (11) shallow soil borings were conducted in and around the former UST area. There were no soils analyzed that produced OVA readings which exceeded background levels (10 ppm). During the headspace screening a single soil sample was collected for laboratory analysis in order to confirm the OVA results. Based on the soil analysis results, there were no EPA Method 8100, 8021 or FL-PRO parameters detected which exceeded the laboratory detection limits.

##### **4.2 Free Product Occurrence**

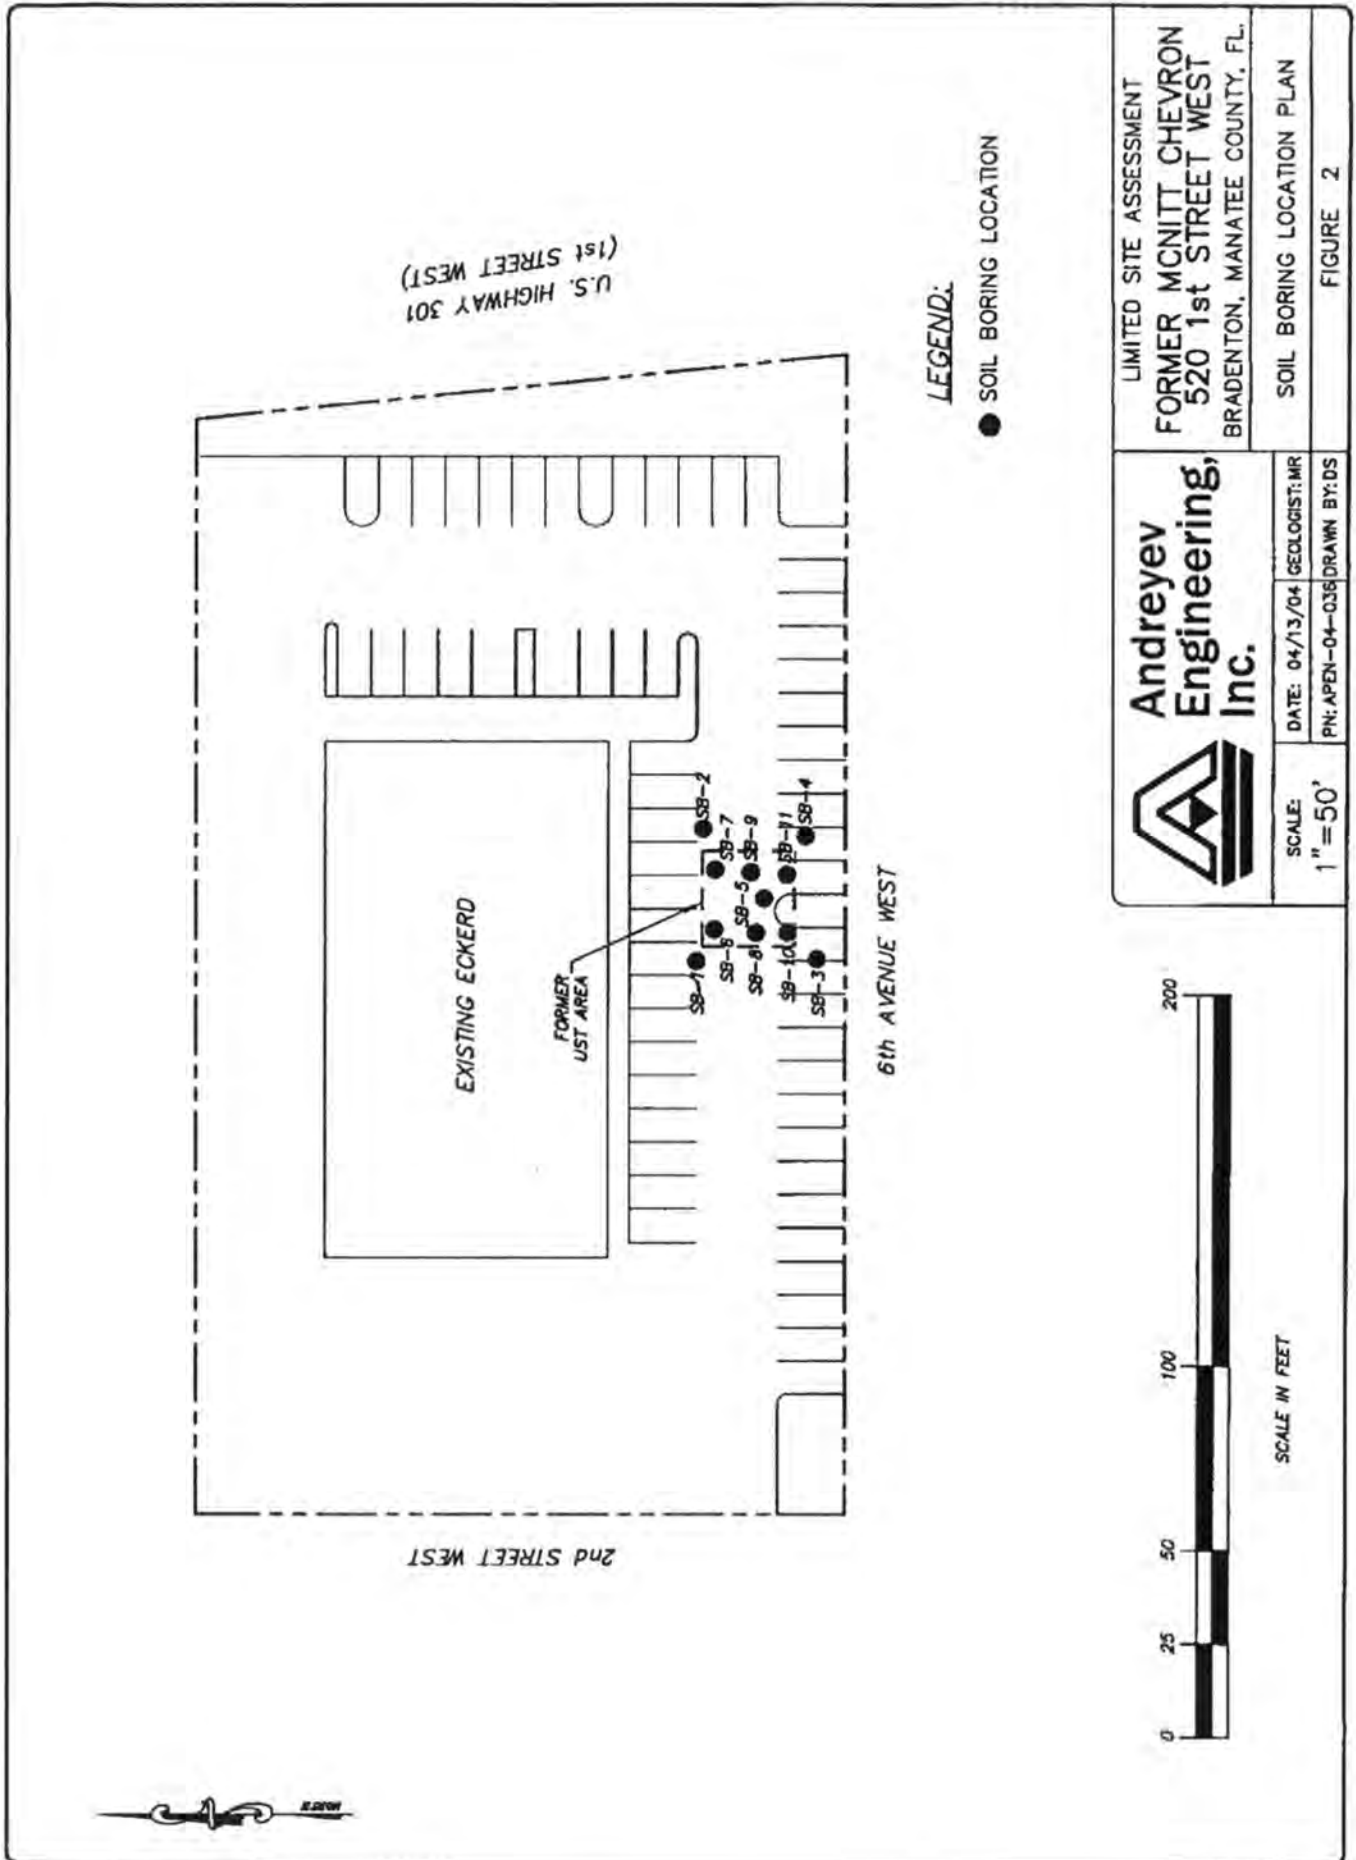

No free petroleum product was detected or present in any of the monitoring wells installed or sampled as part of the assessment activities conducted by AEI in April, 2004.

##### **4.3 Dissolved Hydrocarbons**

Five (5) shallow groundwater monitoring wells (TMW-1 through TMW-5) were installed in and around the former UST area for the purpose of evaluating the presence of dissolved hydrocarbons in the shallow aquifer. Laboratory analyses of groundwater samples collected from these wells detected no EPA method 8021, 8100, FL-Pro or lead parameters which exceeded the laboratory detection limits.

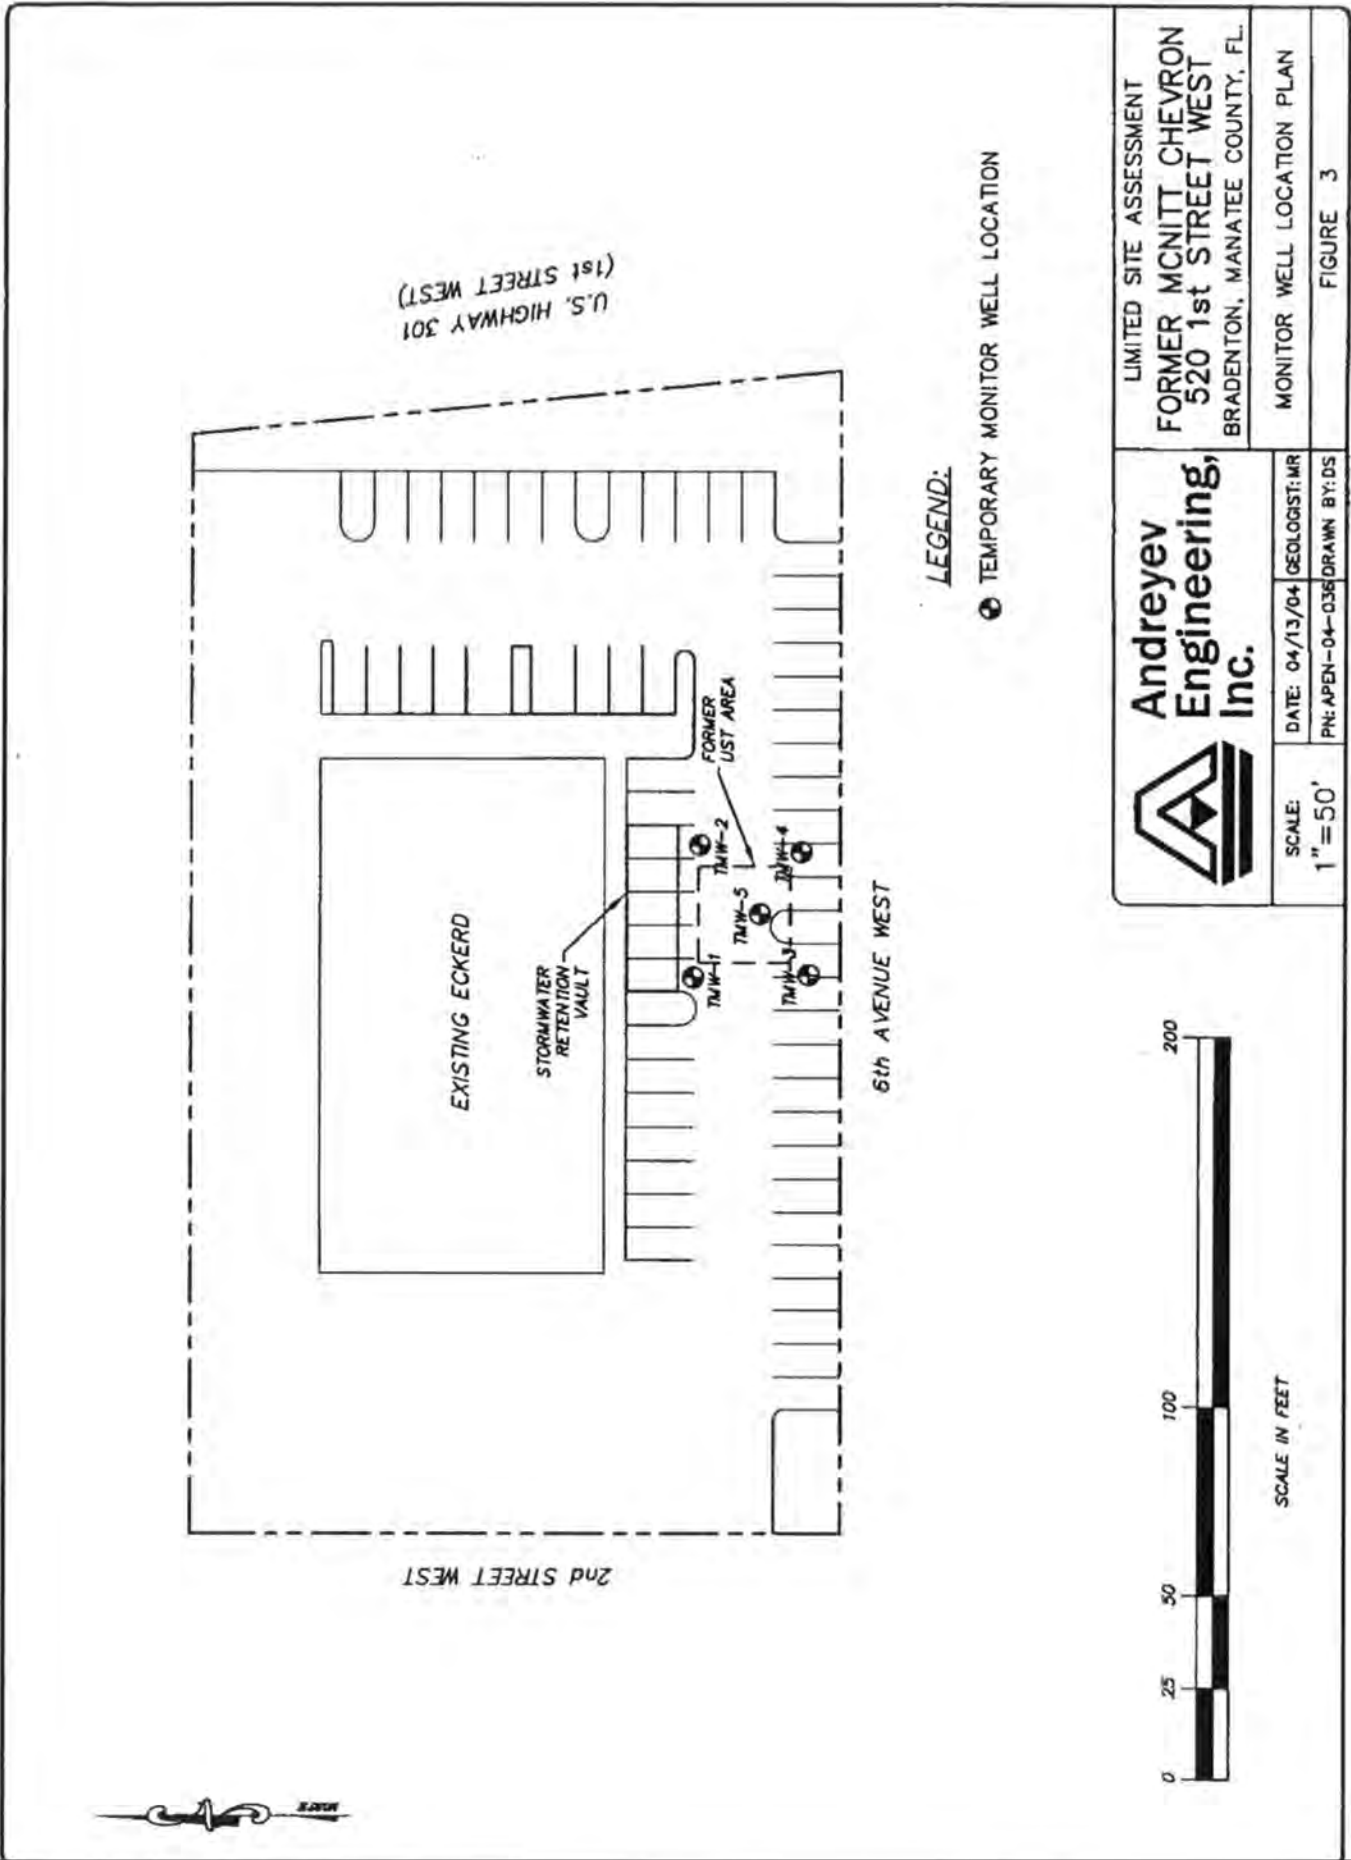

##### **4.4 Recommendations**

Based on the results of this assessment, we respectfully request that a "No Further Action" disposition be approved for this site.

Subject: Site Rehabilitation Completion Order  
Former McNitt Chevron  
520 1<sup>st</sup> Street West  
Bradenton, Manatee County  
FDEP Facility ID#418510778  
Discharge Date: May 9, 1990 (PCPP)  
Discharge Score: 9

Dear Mr. Slemi:

The Bureau of Petroleum Storage Systems has reviewed the Limited Contamination Assessment Report (LCAR) and No Further Action Proposal (NFAP) dated April 13, 2004 (received May 14, 2004), prepared and submitted by Andreyev Engineering, Inc., for the petroleum product discharge discovered at the above referenced facility. Documentation submitted with the NFAP confirms that criteria set forth in Rule 62-770.680(1), Florida Administrative Code (F.A.C.), have been met. The NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the site for petroleum product contamination associated with the discharge listed above, except as set forth below.

In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the site, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the NFAP or otherwise allowed by Chapter 62-770, F.A.C.

## Legal Issues

The Department's Order shall become final unless a timely petition for an administrative proceeding (hearing) is filed under Sections 120.569 and 120.57, Florida

"More Protection. Less Process"

Visit Our Internet Site At: [www.dep.state.fl.us/waste/categories/pcp/default.htm](http://www.dep.state.fl.us/waste/categories/pcp/default.htm)

Printed on recycled paper.

- Mr. Chris Slemi  
FDEP Facility ID#418510778  
Page two

Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for a hearing are set forth below.

Persons affected by this Order have the following options:

- (A) If you choose to accept the Department's decision regarding the NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.
- (B) If you choose to challenge the decision, you may do the following:
  - (1) File a request for an extension of time to file a petition for hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for hearing; or
  - (2) File a petition for administrative hearing with the Agency Clerk in the Office of General Counsel of the Department within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

#### How to Request an Extension of Time to File a Petition for Administrative Hearing

For good cause shown, pursuant to Rule 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for hearing. Such a request must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Eckard Corporation, shall mail a copy of the request to Eckard Corporation at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for administrative hearing must be made.

#### How to File a Petition for Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from Eckard Corporation, shall mail a copy of the petition to Eckard Corporation at the time of filing. Failure to file a petition

- Mr. Chris Slemi  
FDEP Facility ID#418510778  
Page three

within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsections 120.54(5)(b)4. and 120.569(2), F.S., and Rule 28-106.201, F.A.C., a petition for administrative hearing shall contain the following information:

- (a) The name, address, and telephone number of each petitioner, the name, address, and telephone number of the petitioner's representative, if any, the site owner's name and address, if different from the petitioner, the FDEP facility number, and the name and address of the facility;
- (b) A statement of when and how each petitioner received notice of the Department's action or proposed action;
- (c) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
- (d) A statement of the material facts disputed by the petitioner, or a statement that there are no disputed facts;
- (e) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
- (f) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
- (g) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

#### Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Agency Clerk in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the clerk of the Department (see below).

Questions

Any questions regarding the Department's review of your NFAP should be directed to Michael J. Bland at (850) 245-8912. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for administrative hearing or request for an extension of time to file a petition for administrative hearing.

The FDEP Facility Number for this site is 418510778. Please use this identification on all future correspondence with the Department.

Sincerely,

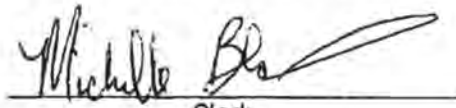

Michael E. Ashley, Chief  
Bureau of Petroleum Storage Systems

**BRADENTON HERALD PROPERTY  
102 MANATEE AVENUE WEST  
BRADENTON, FLORIDA  
(FDEP FACILITY ID. #418630014)**

**1.0 INTRODUCTION**

Environmental Assessments + Consulting, Inc. (EAC) was retained by The Bradenton Herald to perform a Limited Contamination Assessment (CA), in accordance with Florida Administrative Code (FAC) Chapter 62-770 (Petroleum Contamination Site Cleanup Criteria), at the Bradenton Herald property located at 102 Manatee Avenue West in Bradenton, Florida. The subject site is currently occupied by The Bradenton Herald. The FDEP Facility ID number for this site is 418630014.

**1.1 Background**

One (1) 4000-gallon petroleum product (gasoline) UST was removed from the subject site on April 21, 1997 by Jack H. Eubank, Inc. Subsequently, a Tank Closure Assessment Report dated May 7, 1997 was generated by Environmental Safety Consultants, Inc. (ESC). A summary of the closure assessments activities are as follows:

Fourteen soil samples were collected around the perimeter and bottom of the tank vault for headspace testing; soil headspace vapors were analyzed with an OVA/FID in accordance with the method defined in FAC Chapter 62-770, sampling the headspace of a 16 ounce soil jar. The results obtained with the OVA/FID indicated that soils in the former tank excavation area were not "excessively contaminated" by petroleum products as defined in FAC Chapter 62-770. In addition, one groundwater sample was collected from a temporary well located in the tank vault area. Laboratory analysis indicated that Benzene was detected at a concentration of 0.42 ug/L, Toluene was detected at a level of 3.1 ug/L, Ethylbenzene was detected at a concentration of 2.0 ug/L and total Xylenes were detected at a concentration of 88.2 ug/L (TVOA = 93.72 ug/L). These concentrations exceeded the state clean-up criteria (50 ug/L for TVOA) as established in

FAC Chapter 62-770 for the Gasoline Analytical Group. A copy of the ESC Tank Closure Assessment Report is included as **Appendix 1**. A Discharge Reporting Form (FDEP 62-761.900 (1)) was filed on May 13, 1997 and a Contamination Assessment (CA) was then initiated by Environmental Assessments + Consulting, Inc. (EAC) pursuant to FAC 62-770.600 (1).

### **1.2 Scope of Work**

The following Limited Contamination Assessment tasks have been completed at the subject site in accordance with FAC Chapter 62-770:

- o Determination of the existence of domestic and/or public supply wells in the vicinity of the site;
- o Installation of three (3) permanent monitoring wells;
- o Field headspace analyses of soil samples collected from the monitoring well borings;
- o Installation of three (3) Piezometers and determination of the local groundwater flow direction;
- o Laboratory analysis of groundwater samples collected from the source well (MW-2), upgradient well (MW-1), and downgradient well (MW-3) by EPA methods 602 on August 27, 1997.
- o All assessment tasks were performed adhering to EAC's approved Comprehensive Quality Assurance Project Plan (Comp QAPP) #930135-G on file with the FDEP.

### **1.3 Location and Topography**

The site is located in the NE 1/4 of the NE 1/4 of Section 26, Township 35 South, Range 17 East, in Bradenton, Manatee County, Florida. The surrounding area is characterized by commercial and light industrial properties. Topographical relief in the immediate area is low with the surface elevation on the subject property being at approximately ten (10) feet above sea level. The site lies approximately 1/4-mile south of the Manatee River, which is contiguous with the Gulf of Mexico. The water table is generally encountered between 4.0 feet to 6.0 feet below grade.

## **2.0 SOIL ASSESSMENT ACTIVITIES**

### **2.1 Monitoring Well Borings**

Three (3) borings for groundwater monitoring wells were advanced in the immediate vicinity of the former UST area (upgradient, downgradient and source) using a stainless steel, decontaminated hand auger. The locations of the borings for monitoring wells MW-1, MW-2, and MW-3 are shown in Figure 2, Site Plan.

Soil samples were collected from the monitoring well borings at MW-1, MW-2 and MW-3 at two (2) and four (4) foot intervals to a total depth of approximately 4-feet below grade (vadose zone) and subjected to headspace analyses as prescribed in FAC Chapter 62-770. The water table was encountered at approximately 4.0 feet below grade.

#### **2.1.1 Headspace Analyses**

FAC Chapter 62-770 defines "excessively contaminated" soils as those that are saturated with petroleum or petroleum product, or those that cause a total hydrocarbon reading of 500 ppm for Gasoline Analytical Group or 50 ppm for Kerosene Analytical Group on an Organic Vapor Analyzer (OVA) instrument equipped with a Flame Ionization Detector (FID) upon sampling the headspace in a half-filled sixteen (16) ounce soil jar. The former contents of the UST (gasoline) dictated that the Gasoline Analytical Group criteria (500 ppm) be applied to the subject site.

A Sensidyne 41085 model Organic Vapor Analyzer (OVA) was utilized for the headspace analyses. The OVA was equipped with a charcoal filter, which was intended to allow discrimination between petroleum hydrocarbons and naturally occurring methane in the soil vapor. With the filter removed, the OVA measured the sum of all hydrocarbons in the soil vapor. With the filter in place, only methane was measured. The level of suspected petroleum hydrocarbons in the soil vapor for each sample was obtained by subtracting the filtered reading from the unfiltered reading.

During augering activities, net OVA readings were below detection limits of the OVA-FID at monitor well MW-3 (downgradient well). In addition, at MW-1 (upgradient well), net OVA readings ranged from Below Detection Limits (BDL) to 2 ppm and at MW-2 (source well), total OVA readings ranged from 160 to 370 ppm. As indicated, "excessively contaminated" soil, as defined by FAC Chapter 62-770, was not identified at any of the monitor well locations. The results of the headspace analyses are summarized in **Appendix 2**.

OVA/FID soil screening activities in order to define any existing "excessively contaminated" soil were not performed in the area of the former UST because no excessively impacted soil was encountered during the Tank Closure activities completed in May, 1997.

### **3.0 GROUNDWATER ASSESSMENT ACTIVITIES**

#### **3.1 Monitoring Well Installation**

Three (3) groundwater monitoring wells, designated MW-1, MW-2 and MW-3 were installed at the subject site on August 21, 1997. The locations of these wells are shown in Figure 2, Site Plan.

Monitor wells MW-1, MW-2 and MW-3 were installed by hand auger at the subject site. MW-1 was designated as the upgradient monitor well, MW-2 was designated as the source monitor well and MW-3 was designated as the downgradient monitor well. The bore holes for the monitor wells were advanced utilizing a 4" stainless steel, decontaminated hand auger. Two (2) inch Schedule 40 PVC casing and screen was set to approximately 7.0 feet below grade; the total depth of the wells. Screened intervals (0.010" slot size) extended from the well bottoms to approximately two (2) foot below grade. The annulus of each well was filled with clean 20/30 silica sand to a depth of 1.0 feet above the screened interval. A six (6) inch thick layer of bentonite was then placed above the sand and hydrated. The remaining annular volume was then filled with neat Portland cement grout and completed with a locking cap. Lithologic Logs and Well Construction Details for monitor wells MW-1, MW-2 and MW-3 are presented in Appendices 2 and 5, respectively.

#### **3.2 Groundwater Sampling Protocol**

On August 27, 1997, groundwater samples were collected from Monitoring Wells MW-1, MW-2 and MW-3 in accordance with EAC's approved Comprehensive Generic QAPP #930135G on file with the Florida Department of Environmental Protection. The depth to the water table was measured in each well to determine the amount of groundwater to be evacuated prior to collecting the samples. Groundwater samples were collected using pre-cleaned, dedicated, teflon bailers at the monitoring well locations. Decontamination procedures in the field were as follows: The teflon bailers were first scrubbed with a nylon brush in an Alconox/Water solution, then thoroughly rinsed with Deionized Water. The bailers were then sprayed with laboratory grade isopropyl alcohol and finally rinsed with laboratory grade Analyte Free water and then allowed to air dry.

Prior to collection of the samples, the well volumes of each well were calculated, then three (3) well volumes were purged from each well in order to obtain a representative groundwater sample. In addition, temperature, pH and conductivity readings were obtained and recorded after each purging interval. Sample collection was achieved by using a teflon bailer to retrieve the groundwater samples from the monitor wells; the samples were then emptied into dedicated, glass vials. All samples were then placed in an iced cooler and transported to Progress Environmental Laboratories in Tampa, Florida for analysis.

Samples collected from MW-1 (upgradient well), MW-2 (source well), and MW-3 (downgradient well) were analyzed for compounds detectable by EPA method 602 as specified in FAC Chapter 62-770.

### **3.3 Analytical Results**

The results of the groundwater sample analyses are summarized on the following page in Table 3.3. The complete laboratory analytical results are presented in Appendix 3.

**Table 3.3: Volatile Organic Concentrations at Bradenton Herald Property (8/27/97)**

COMPOUND	MW-1	MW-2	MW-3	E.B.	MCL
MTBE	ND	ND	ND	ND	50
TVOA	0.56	ND	ND	ND	50
Benzene	ND	ND	ND	ND	1.0
Toluene	ND	ND	ND	ND	---
Ethylbenzene	ND	ND	ND	ND	---
Xylenes (Total)	ND	ND	ND	ND	---
Chlorobenzene	ND	ND	ND	ND	---
1,2-Dichlorobenzene	ND	ND	ND	ND	---
1,3-Dichlorobenzene	ND	ND	ND	ND	---
1,4-Dichlorobenzene	ND	ND	ND	ND	---

- All concentrations are given in micrograms per liter (ug/L).
- ND signifies Not Detected at or above laboratory detection limits.
- MCL = Maximum Contaminant Level as Established in FAC 62-770.
- EB = Equipment Blank.

### 3.3.1 Discussion

FAC Chapter 62-770.730 (5) (a) 1 specifies Gasoline Analytical Group contaminant target levels for G-II groundwater as follows:

<u>Contaminant</u>	<u>Concentration</u>
Benzene	1.0 ug/L
Total VOAs (sum of Benzene, Ethyl Benzene, Toluene and Xylene)	50.0 ug/L
Methyl-Tert-Butyl-Ether (MTBE)	50.0 ug/L

During the August 27, 1997 groundwater sampling event, Toluene was found to be present in the sample collected from MW-1 (upgradient well) at a concentration of 0.56 micrograms per liter (ug/l) (TVOA = 0.56 ug/l). In addition, compounds detectable by EPA method 602 were not found to be present in any of the groundwater samples collected from MW-2 or MW-3 (source and downgradient wells).

#### **4.0 HYDROGEOLOGIC DATA**

Groundwater flow direction was also determined, and an attempt was made to identify private and public supply water wells in the vicinity of the subject site.

#### **4.1 Groundwater Flow Direction**

Prior to the installation of MW-1, MW-2 and MW-3, three (3) temporary Piezometers (PZ-1, PZ-2 and PZ-3) were installed on the subject site in an attempt to determine the local groundwater flow direction at the subject property and to use this data in making a determination as to the placement of the monitor wells. Elevations of the piezometer casings were established relative to an assumed benchmark using a survey rod and level. Fluid levels in the piezometers were determined using an interface probe which allows measurement of the depth to the water table to within 0.01'. By applying the gauging data to the survey data (See **Appendix 4; Groundwater Elevation Data**), groundwater elevations for the piezometers were obtained. Initial groundwater elevation data from the piezometers was then plotted on the site plan and contoured. **Figure 3, Groundwater Elevation Contour Map (8/8/97)**, indicates that groundwater flow at the site is to the north - northwest. In addition, the elevations of the monitor well casings of MW-1, MW-2 and MW-3 were also established relative to an assumed benchmark in the field. Groundwater elevations for the monitor wells were then determined by the above stated method. The groundwater elevation data for the monitor wells was also plotted on the site plan and contoured, **Figures 3 and 4, Groundwater Elevation Contour Maps**, illustrate the groundwater flow for the subject site on these separate events (towards the north-northwest).

#### **4.2 Potable Well Survey**

EAC conducted a survey for private water wells within a one-quarter (1/4) mile radius and public supply wells within a one-half (1/2) mile radius of the subject site at the Manatee County Environmental Management Department in Bradenton, Florida. The potable well survey was performed on in order to identify potential receptors of groundwater migrating from the site. Based on information obtained within the well files at this office, six (6) irrigation wells are

located within a 1/4-mile radius of the subject site. In addition, no domestic potable supply wells are located within a 1/4-mile radius of the subject site and no public supply wells are located within a 1/2-mile radius of the site. See **Figure 6** for the location of the irrigation wells discovered within a 1/4-mile radius of the subject property.

<u>Well Type</u>	<u>Location of Well</u>	<u>Distance / Direction from Site:</u>
Irrigation	102 Manatee Avenue West	Subject Property
Irrigation	404 1st Street East	100 feet East
Irrigation	333 6th Avenue West	800 feet Southwest
Irrigation	311 4th Street East	1/4-mile Northeast
Irrigation	410 4th Avenue East	1/4-mile East
Irrigation	U.S. 41 / South of River	1/4-mile North

## **5.0 CONCLUSIONS**

Contamination Assessment activities have been performed at the subject site in accordance with FAC Chapter 62-770. Soil samples collected during the monitoring well installation procedure were subjected to headspace readings as prescribed by FAC Chapter 62-770.

Three (3) groundwater monitoring wells were installed in the immediate vicinity of the former UST area; one upgradient of the source area (MW-1), one downgradient of the source area (MW-3) and one in the source area (MW-2). Groundwater collected from MW-1 (upgradient well), MW-2 (source well), and MW-3 (downgradient well) were analyzed for compounds detectable by EPA method 602 as specified in FAC Chapter 62-770. All field work and groundwater sampling was conducted in accordance with EAC's approved Generic Comprehensive QAPP #930135-G.

During the August 27, 1997 groundwater sampling event, Toluene was found to be present in the sample collected from MW-1 (upgradient well) at a concentration of 0.56 parts per billion (ppb) (TVOA = 0.56 ppb). In addition, compounds detectable by EPA method 602 were not found to be present in any of the groundwater samples collected from MW-2 or MW-3 (source and downgradient wells). The monitoring well casings were surveyed, and their elevations were determined relative to an assumed benchmark located in the field. Depth to water measurements were obtained, and groundwater elevation contour maps were compiled on two different events, indicating that the groundwater flow direction at the subject site is to the north-northwest.

According to potable well information obtained from the Manatee County Environmental Management Department, six (6) irrigation wells are located within a 1/4-mile radius of the subject site. In addition, no domestic potable supply wells are located within a 1/4-mile radius of the subject site and no public supply wells are located within a 1/2-mile radius of the site.

## **6.0 RECOMMENDATION**

Upon consideration of the following, EAC recommends that no further assessment or remediation for this site is warranted, and proposes that the site be considered for No Further Action (NFA) status pursuant to FAC Chapter 62-770.630 (3) and the October, 1990, FDEP No Further Action and Monitoring Only Guidelines for Petroleum Contaminated Sites (NFA/MO) document:

- o No excessively contaminated soil were encountered during tank closure activities conducted on May 7, 1997 or during monitor well installation activities on August 21, 1997. Groundwater conditions at the site are well below the state's SRL's established in FAC Chapter 62-770.735 (a) for the Gasoline Analytical group. Furthermore, contaminate concentration levels at the subject site and potable well data for risk analysis meet No Further Action levels as defined in the "No Further Action and Monitoring Only Guidelines for Petroleum Contaminated Sites" document dated October, 1990.
- o No "excessively contaminated" soil exists on the site.
- o No phase separated hydrocarbons were encountered during the limited contamination assessment.
- o Six (6) irrigation wells exist within a 1/4-mile radius of the site; six (6); No domestic potable supply wells are located within a 1/4-mile radius of the subject site and no public supply wells are located within a 1/2-mile radius of the site.
- o The surficial soils beneath the site consist primarily of gray fine sand with shell fragments from land surface to approximately seven (7) feet BLS.
- o Off-site migration of dissolved hydrocarbons in the area of MW-2 is not evident.

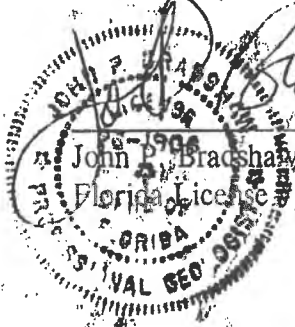

Based on the results of this Limited CA, EAC recommends that a "No Further Action (NFA) be implemented at this site.

**7.0 STATEMENT OF PROFESSIONAL REVIEW**

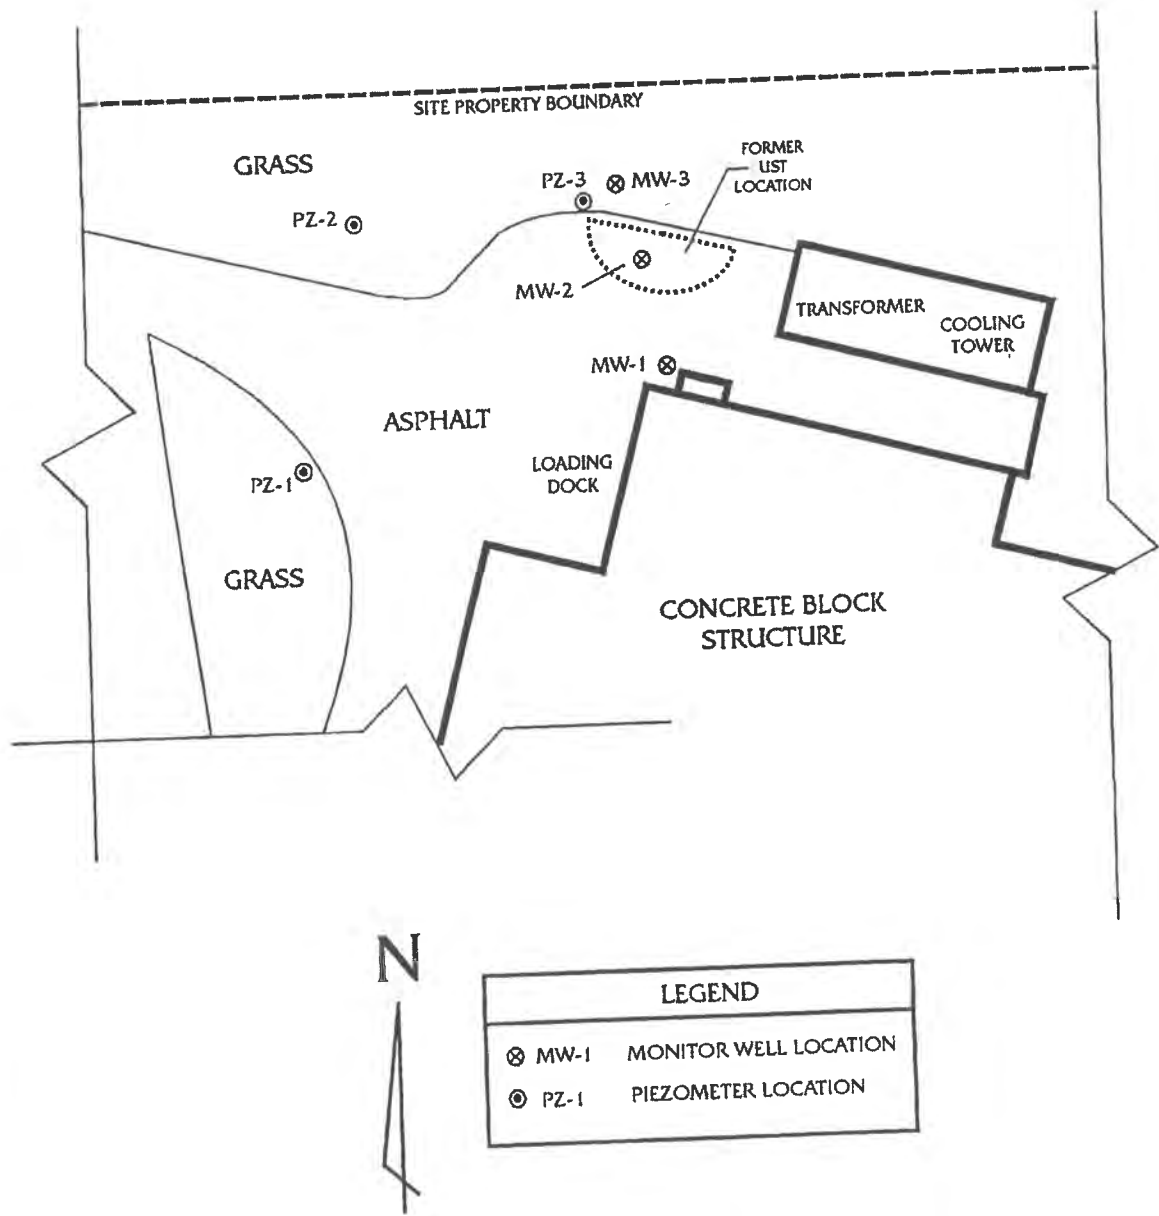

The discussions and conclusions contained in this Contamination Assessment Report have been reviewed by John P. Bradshaw, PG, President, Environmental Assessments + Consulting, Inc. and is found to conform to standard geological practices pursuant to Chapter 492 of the Florida Statutes. The professional services discussed herein have been performed using that degree of care and skill ordinarily exercised under similar circumstances by other geologists and engineers practicing in this field. No other warranty is expressed or implied as to the conclusions contained in this report.

This report was prepared by Environmental Assessments + Consulting, Inc.

**TYPE OF OWNERSHIP:** Private

**Introduction:**

The Bradenton Herald production plant was inspected October 29, 2008 to determine its compliance with state and federal hazardous waste regulations. Paul Panik and Wes Ripperger from the Manatee County Department of Environmental Management accompanied the inspector. The Herald was represented by Chet Syjud, the current Operations Manager, and David Payne, the current Press Room Supervisor. Daily newspaper production has recently ceased at this facility, however the equipment is still on site and is being used for smaller commercial printing operations. The facility is currently only generating non hazardous or exempt wastes - used oil, universal waste lamps, universal waste batteries and silver recovery wastes that are being reclaimed. The facility has the potential to generate hazardous wastes when disposing of unused, out of date commercial chemicals.

**Process Description:**

Pre-press operations include layout, negative printing, plate imaging and plate development. Currently all artwork, photography and paste up is done by computer. Digital images of the pages to be printed are exposed onto film negatives, which are then developed in a two stage automated processor. The spent photographic solutions are discharged directly through a silver recovery unit to the city sewer. An independent contractor, The Imaging Network, maintains the units and manages the recovered silver and spent cartridges.

The drain pipe is accessible from the press room floor, and remnants of a previous silver recovery system were located next to the pipe. Mr. Payne said that this system had not been used for several years, and that the sludges generated in the system had not been cleaned out. This material appears to have been speculatively accumulated, and is therefore a hazardous waste. However, as the total amount of waste does not exceed 1,000 kg, storage of this material is not a violation of hazardous waste regulations. The material was disposed of November 7, 2008.

The negatives are placed on to aluminum plates, pre-coated with a light sensitive emulsion. High

**Bradenton Herald Inspection Report**

Inspection Date: 10/29/2008

intensity lights are used to expose the plates rather than UV light. Yellow photosafe fluorescent lighting is used in the imaging room to control exposure of the plates before they are developed in an automated processor. The processor is cleaned about once per month, and the spent developer and stabilizer solutions are also discharged directly to the sewer.

The plant has one large and one small web fed offset presses. Most jobs are run using standard four color inks. Special colors can be blended and run, usually on the small press. Black ink is received by tanker and stored in a tank located in the ink room. Cyan, magenta and yellow inks are received by tote. Ink lines have bag filters to ensure that particulate matter is not sent to the presses. Inks are recovered and recycled by scraping them into a trough, then filtering the residues, blending in additional black ink and then by piping the ink back to the black ink tank. The spent filters generated by the process are one of the facility's primary non hazardous waste streams. The sinks and floor drains from the ink rooms and press areas drain to a four compartment settling tank. Waste water that separates from the ink is discharged to the City of Bradenton sewer system. Ink is periodically pumped out and disposed of as non hazardous. The last disposal event for this material was in November 2007, when 800 gallons of waste was pumped by EQ Tampa. Waste disposal is brokered through Stone Environmental of Placida, Florida.

The ink room has one parts washer that uses a high flash (over 200 F) solvent for roller cleaning. The same solvent is used with rags for blanket cleaning. Used rags are laundered by Aramark. Used oil generated in the press rooms was being accumulated in blue poly drums, which were stored under an open stairway. One was open with a funnel in the bung. As the stairway is not a fire evacuation route, this does not appear to be a violation of the fire code. Loose sheets of paper with the words "used oil" were placed on top of the drums, but the labels were somewhat obscured by debris falling through the stair grating. It was recommended that the sides of the containers be clearly labeled, as loose labels can blow off drums. Two drums of spent parts washer solution and a drum of ink filter waste were also stored in this location. The Herald does not store wastes outside.

Used oil was also being generated in the chiller room. The drum in this room was open, with a funnel in the bung. It was located within two feet of an overhead door to the outside, and was not provided with secondary containment, as required by FAC Rule 62-710.401(6). It was labeled "waste oil" rather than "used oil," also a violation of this rule. Two open unlabeled five gallon buckets of used oil were located further from the door in this room. These issues were corrected subsequent to the inspection.

The mechanical repair shop included a small parts washer that was not being used, a soldering station, a cabinet of assorted cleaning chemicals that appeared to be in good condition, a closed, labeled 5 gallon bucket containing universal waste batteries and a closed labeled tube container for universal waste lamps. Several open boxes of good lamps were also present, and a few of the lamps in those boxes appeared to be spent. Mr. Payne checked these lamps to ensure that all spent lamps were being stored in the closed, labeled container subsequent to the inspection. Universal wastes are disposed of through Envirolight.

The facility maintains fire extinguishers and a carbon dioxide based fire suppression system in the press room. Spill control equipment was on a wall adjacent to the ink storage area, along with spill control procedures and emergency contact information. One of the emergency coordinators listed was no longer with the Herald, however this is not a violation as the facility is conditionally exempt.

**POTENTIAL VIOLATIONS AND AREAS OF CONCERN WITH NO ASSIGNED AREA:****Pre-existing Potential Violations and Areas of Concern:****Used Oil Generator Checklist**

Type: Violation

**Bradenton Herald Inspection Report**

Page 3 of 5

Inspection Date: 10/29/2008

Rule: 279.22(c)

Question Number: 5.1.3

Explanation: Two five gallon buckets of used oil were not labeled. A 55 gallon drum was labeled "waste oil" rather than Used Oil. The violations were corrected subsequent to the inspection.

Corrective Action: Ensure all containers of used oil are clearly labeled with the words "used oil."

Type: Area Of Concern

Rule: 62-710.401(6)

Question Number: 5.1.6.1

Explanation: One container of used oil in the chiller room was stored without secondary containment and within two feet of an overhead door leading to the outside of the facility. This was corrected subsequent to the inspection.

Corrective Action: Ensure all used oil containers are provided with secondary containment if leaks could release oil to the environment.

**Summary of Potential Violations and Areas of Concern:**Potential Violations

Rule Number	Area	Date Cited	Explanation
Used Oil Generator Checklist 279.22(c)		10/29/2008	Two five gallon buckets of used oil were not labeled. A 55 gallon drum was labeled "waste oil" rather than Used Oil. The violations were corrected subsequent to the inspection.

Areas of Concern

Rule Number	Area	Date Cited	Explanation
Used Oil Generator Checklist 62-710.401(6)		10/29/2008	One container of used oil in the chiller room was stored without secondary containment and within two feet of an overhead door leading to the outside of the facility. This was corrected subsequent to the inspection.

**Conclusion:**

The Bradenton Herald was out of compliance with used oil storage requirements. This was corrected subsequent to the inspection. Universal waste lamp management requirements were also discussed.

**History:**

## Bradenton Herald Inspection Report

Page 4 of 5

Inspection Date: 10/29/2008

**Signed:**

A hazardous waste compliance inspection was conducted on this date, to determine your facility's compliance with applicable portions of Chapters 403 & 376, F.S., and Chapters 62-710, 62-730, 62-737, & 62-740 Florida Administrative Code (F.A.C.). Portions of the United States Environmental Protection Agency's Title 40 Code of Federal Regulations (C.F.R.) 260 - 279 have been adopted by reference in the state rules under Chapters 62-730 and 62-710, F.A.C. The above noted potential items of non-compliance were identified by the inspector(s).

This is not a formal enforcement action and may not be a complete listing of all items of non-compliance discovered during the inspection.

### Palmetto Economic Enhancement District

DRAFT

715 4<sup>th</sup> Street West  
Palmetto, Florida 34221

January 22, 2013

Kim Walker  
Environmental Administrator  
FL Dept. of Environmental Protection  
Division of Waste Management  
Bob Martinez Center  
2600 Blair Stone Road  
Tallahassee, Florida 32399-2400

BUREAU OF WASTE CLEANUP  
RECEIVED

JAN 28 2013

FEDERAL PROGRAMS SECTION

Dear Ms. Walker,

On December 3, 2012, the Palmetto City Commission unanimously adopted resolution 2012-39, which designated the bulk of the community redevelopment area in Palmetto as a brownfield area, to be called the "Palmetto Economic Enhancement District." Five property owners opted out and their parcels are listed in the motion to adopt the resolution as not to be included in the brownfield area designation. Minutes of the December 3 meeting were approved by the commission on January 7, 2013. Enclosed are copies of the resolution, the motion to adopt the resolution and a map of the brownfield area.

The Palmetto Community Redevelopment Agency coordinates redevelopment within the community redevelopment area and it will also facilitate brownfield redevelopment activities within the Palmetto Economic Enhancement District, as well. The main point of contact at the CRA will be Robert Marble, who can be reached by phone at 941 723-4988, by e-mail at [rmarble@palmettofl.org](mailto:rmarble@palmettofl.org), or through the CRA mailing address above. In addition, please do not hesitate to contact the undersigned on matters related to brownfield redevelopment.

We look forward to working with you in the future.

Sincerely,

A handwritten signature in black ink, appearing to read "Jeff Burton", is written over a faint, larger version of the signature.

Jeff Burton

## RESOLUTION NO. 2012-39

## FEDERAL PROGRAMS SECTION

A RESOLUTION OF THE CITY COMMISSION OF THE CITY OF PALMETTO, FLORIDA, DESIGNATING THE AREA FOR INCLUSION WITHIN THE PALMETTO COMMUNITY REDEVELOPMENT DISTRICT AS A BROWNFIELD AREA FOR THE PURPOSE OF ENVIRONMENTAL REMEDIATION, REHABILITATION AND ECONOMIC REDEVELOPMENT; AUTHORIZING THE CITY CLERK TO NOTIFY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION OF SAID DESIGNATION AS REQUIRED; AND PROVIDING FOR AN EFFECTIVE DATE.

**WHEREAS**, the State of Florida has provided in Ch. 97-277, Laws of Florida, codified as Sections 376.77 - 376.85, Florida Statutes, as amended, which is known as the "Brownfield Redevelopment Act" (the Act) for the designation by resolution of certain lands as a "Brownfield Area", and for the corresponding provision of environmental remediation, rehabilitation, and economic redevelopment for such areas; and

**WHEREAS**, the City of Palmetto shall notify the Florida Department of Environmental Protection of its decision to designate a Brownfield Area for remediation, rehabilitation, and economic redevelopment including the required map, as set forth in the Act; and

**WHEREAS**, the entire Brownfield Area is located within the Palmetto Community Redevelopment Area; and

**WHEREAS**, the City of Palmetto has complied with the procedures set forth in Section 166.041, Florida Statutes (2012), including notice and public hearing(s) in accordance with Sections 376.80(1) and 166.041(3)(c)2, Florida Statutes (2012).

**NOW, THEREFORE, BE IT RESOLVED BY THE CITY OF PALMETTO, FLORIDA:**

**Section 1. Recitals.** The recitals set forth in the whereas clauses to this Resolution are hereby adopted as the legislative findings of the City Commission.

**Section 2. Area and Conditions.** The mapped area described in Exhibit "A", attached here to and incorporated herein by reference, is hereby designated as the Palmetto Economic Enhancement District and as a Brownfield Area for environmental remediation, rehabilitation, and economic redevelopment as set forth in the Act under the following terms and conditions:

- a. The City of Palmetto shall, as soon as practical, designate the entity or entities responsible for the remediation and rehabilitation of the Brownfield Area, or specific portions thereof pursuant to Section 376.80(3), Florida Statutes. The designation of a responsible entity shall not render the City of

601384/1

Palmetto responsible for the costs and liabilities associated with site remediation, rehabilitation, economic redevelopment, or source removal, as those terms are denied in the Act unless the City of Palmetto specifically designates itself as a responsible person pursuant to said Section.

- b. The designation of such Brownfield Area by this Resolution does not render the City of Palmetto responsible for the costs and liabilities associated with site remediation, rehabilitation, economic development, or source removal, as those terms are denied in the Act unless the City of Palmetto specifically designates itself as a responsible person pursuant to Section 376.80(3), Florida Statutes (2012).
- c. Nothing in this Resolution shall be deemed to prohibit, limit, or amend the authority and power of the City of Palmetto, to designate any other property or properties as a Brownfield Site or Brownfield Area, or to modify, amend, or withdraw the designation as established herein.

**Section 3. Clerk's Notification.** In accordance with Section 376.80(1), Florida Statutes (2012), the City Clerk is hereby directed to notify the Florida Department of Environmental Protection of the City of Palmetto's designation of a Brownfield Area for rehabilitation for the purposes of Sections 376.77-376.85, Florida Statutes (2012).

**Section 4. Advisory Committee.** The CRA Advisory Board shall serve as the City Advisory Committee pursuant to Section 376.80(4), Florida Statutes (2012).

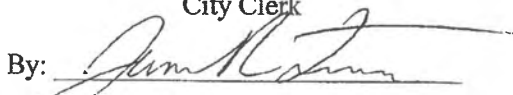

**Section 5. Effective Date.** The provisions of this Resolution shall take effect immediately upon adoption.

**APPROVED AND ADOPTED**, by the City Commission, in open session, with a quorum present and voting, this 3 day of December, 2012.

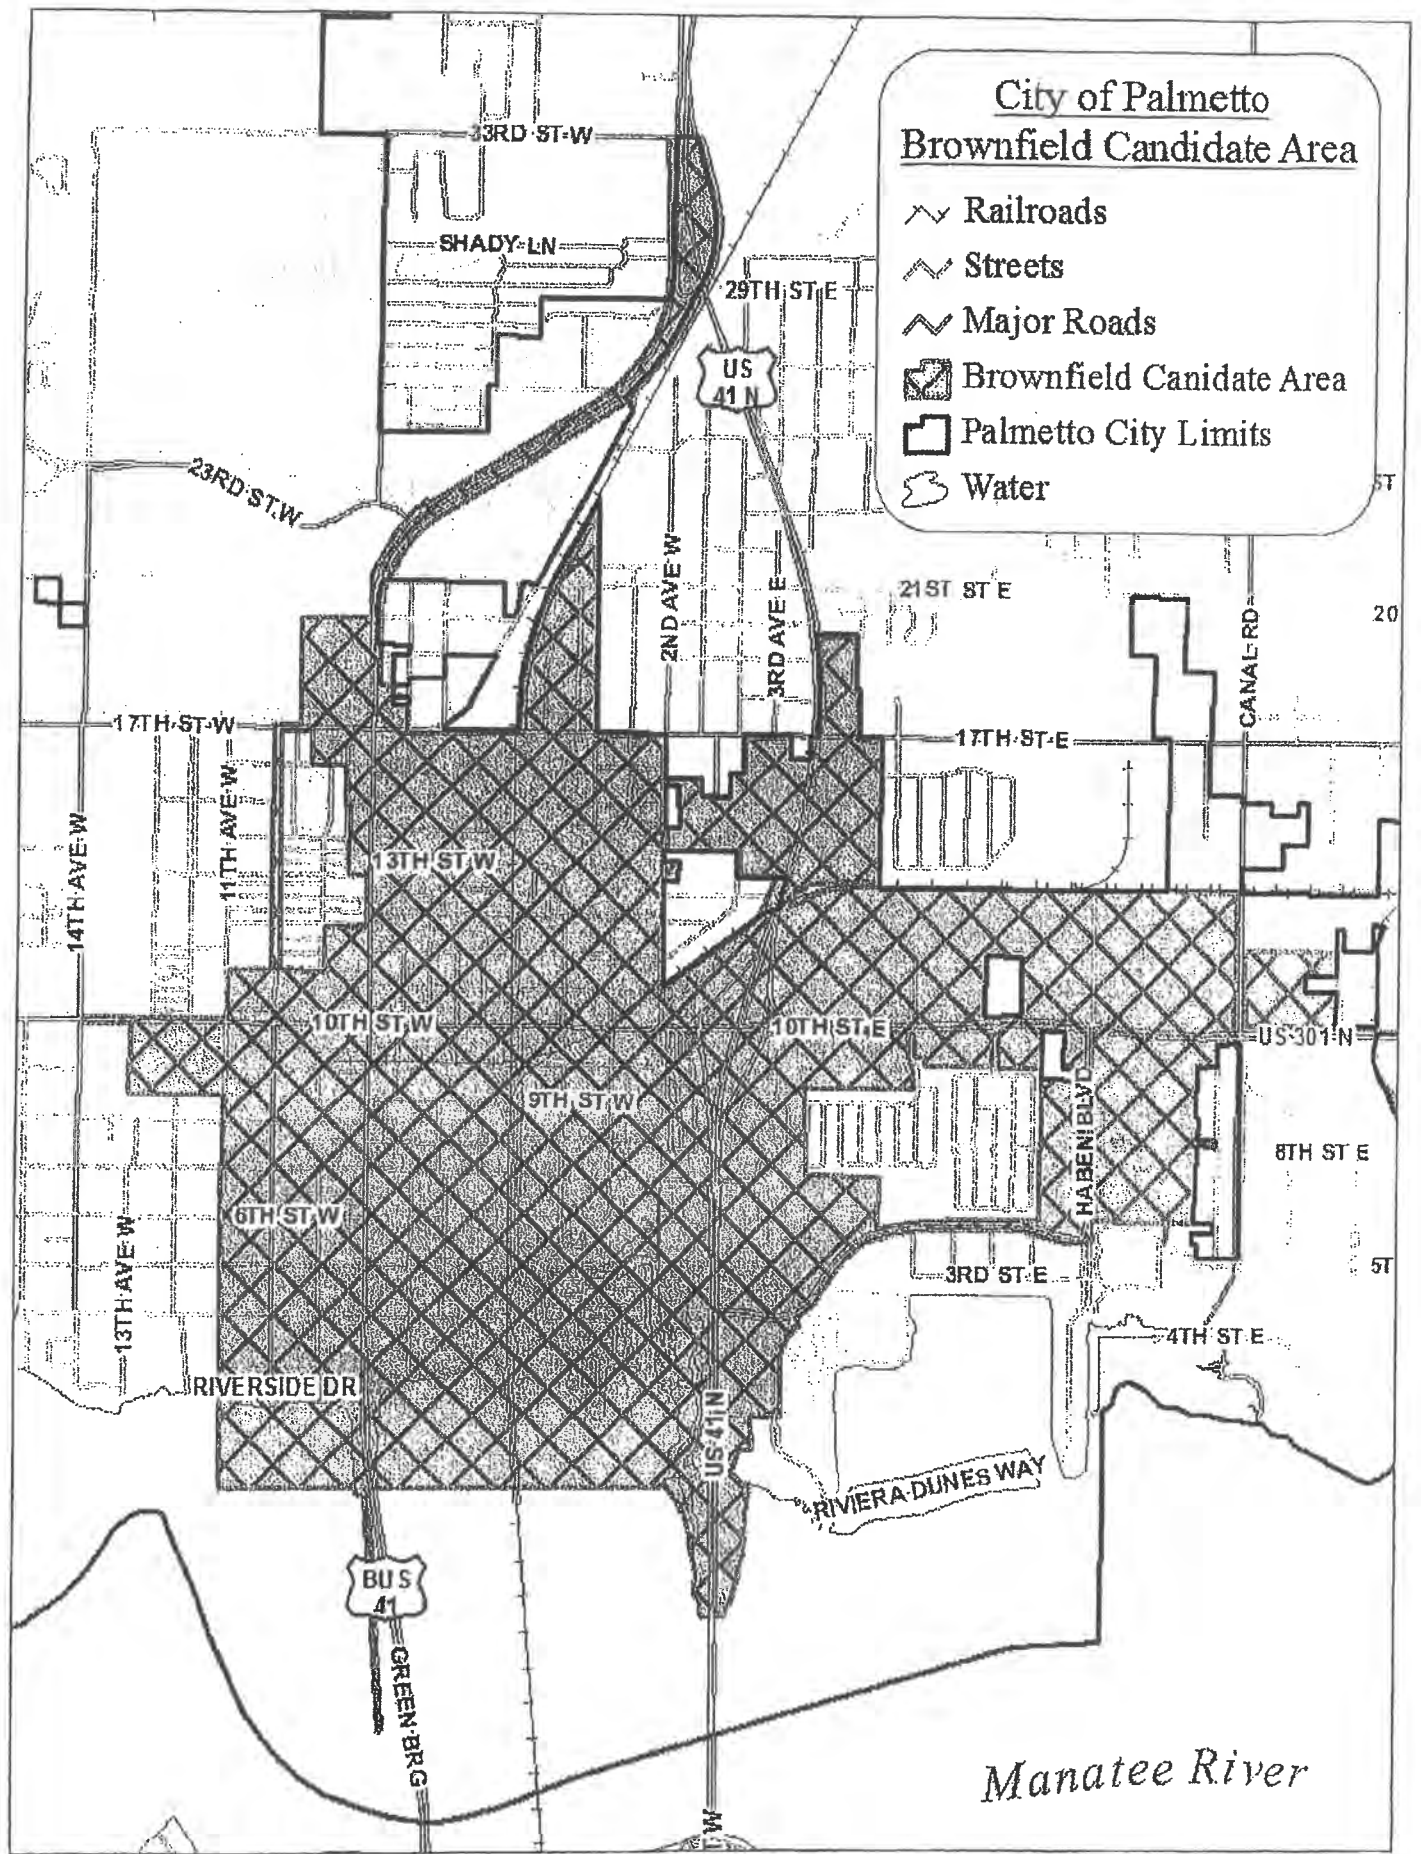

CITY OF PALMETTO, FLORIDA, BY

City Clerk/Deputy Clerk

**CITY OF PALMETTO  
CITY COMMISSION MEETING  
AND CRA BOARD MEETING  
DECEMBER 3, 2012  
7:00 PM**

Elected Officials Present

Shirley Groover Bryant, Mayor  
Brian Williams, Vice Mayor, Commissioner, Ward 3  
Tamara Cornwell, Commissioner-at-Large 2  
Jonathan Davis, Commissioner-at-Large 1  
Charles Smith, Commissioner, Ward 1  
Tambra Varnadore, Commissioner, Ward 2

Staff Present

Mark Barnebey, City Attorney  
Jeff Burton, CRA Director  
Jim Freeman, City Clerk  
Javier Vargas, Public Works Superintendent  
Rick Wells, Chief of Police  
Amber Foley, Assistant City Clerk

Vice Mayor Williams called the meeting to order at 7:00 p.m.

Larry Prichett, Pastor of Palm View First Baptist Church, gave the invocation, followed by the Pledge of Allegiance.

Judge Thomas Gallen, administered the Oath of Office to Mayor Shirley Groover Bryant.

Vice Mayor Williams relinquished the gavel to Mayor Shirley Groover Bryant to preside over the balance of the City Commission meeting.

Mayor Bryant gave her statement, commenting on several accomplishments that have been achieved during her first term as Mayor. She thanked current and past Commissioners and City staff for their hard work and effort in helping to accomplish these projects.

Mayor Bryant recessed the City Commission meeting at 7:13 p.m. for a reception to recognize her reelection.

Mayor Bryant resumed the City Commission meeting at 7:27 p.m.

All persons intending to address City Commission were duly sworn.

Non-agenda Item Public Comment:

Ian Boyle of Waste Service of Florida informed Commission they will be moving their regional office from Sarasota to Palmetto. The office will be located at 1312 16<sup>th</sup> Avenue East and will create approximately 25 full-time jobs.

1. CITY COMMISSION AGENDA APPROVAL

Mayor Bryant clarified that Item 2.A.1. of the Consent Agenda is for a term of two years, not three years. The attorney for the Board is working on making some changes to their policies and procedures to correct the terms to two years as stated in the Charter.

Mr. Freeman informed Commission that the total litigation related to the PBA Union is \$105,455.22. This amount includes the invoices that are on the agenda tonight.

Regarding 3.A., Mayor Bryant stated that another property owner has provided a written exemption requesting the removal of their property from the brownfields designation.

**Motion: Commissioner Williams moved, Commissioner Smith seconded, and the motion carried 5-0 to approve the December 3, 2012 Agenda.**

2. CONSENT AGENDA APPROVAL

**B. City Clerk's Office:**

1. Minutes: November 5, 2012
2. 2013 Holiday Schedule and 2013 Commission Meeting Schedule
3. Bryant Miller Olive and Blalock Walters Special Legal Billings
4. EAP Contract Renewal

**Motion: Commissioner Varnadore moved, Commissioner Cornwell seconded, and the motion carried 5-0 to approve the December 3, 2012 Consent Agenda.**

**3. 2<sup>nd</sup> PUBLIC HEARING BROWNFIELDS DESIGNATION**

This is a second public hearing to designate a portion of the CRA district as a brownfields area, to be called the "Palmetto Economic Enhancement District."

Mayor Bryant opened the public hearing.

**A) RESOLUTION NO. 2012-39**

A RESOLUTION OF THE CITY COMMISSION OF THE CITY OF PALMETTO, FLORIDA, DESIGNATING THE AREA FOR INCLUSION WITHIN THE PALMETTO COMMUNITY REDEVELOPMENT DISTRICT AS A BROWNFIELD AREA FOR THE PURPOSE OF ENVIRONMENTAL REMEDIATION, REHABILITATION AND ECONOMIC REDEVELOPMENT; AUTHORIZING THE CITY CLERK TO NOTIFY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION OF SAID DESIGNATION AS REQUIRED; AND PROVIDING FOR AN EFFECTIVE DATE.

The following people spoke with concerns regarding residents not having enough information about the designation of brownfields:

- Ellen Leonard
- Chris Kelly

Mr. Burton explained that the brownfield redevelopment program would make property owners in the brownfield eligible for grants, tax credits, and other benefits.

Mayor Bryant closed the public hearing after no further public comment.

**Motion: Commissioner Smith moved, Commissioner Williams seconded the motion to adopt Resolution No. 2012-39 with exemptions requested by five property owners for six pid numbers:  
Audrey Fedeles, 257 Melody Lane, Property ID# 2799611807  
Michael Fleming, 246 Palm Lane, Property ID# 2799610957  
Stephen Guzman, 1250 U.S. 301, Property ID# 2582500134 and #258500159  
Keith Stephen, 263 Meloday Lane, Property ID# 2799611500  
Richard & Joan Hickson, 171 4<sup>th</sup> Street West, Property ID# 2799605601**

Mr. Burton explained that property owners can come forward at any time to remove their property from the brownfields area. Those properties that have been removed can also have their property designated as a brownfields at a later date if they choose.

Commissioner Williams would like to see a flyer sent out to residents explaining the brownfields process.

Commissioner Davis opined that a community meeting could be beneficial to further educate the residents on what a brownfield is.

**Motion on the floor carried 5-0.**

Mr. Burton said he will mail fact sheets about the program to residents and hold a community meeting sometime in February.

**4. EXTENSION OF THE TEMPORARY OR PORTABLE FOOD VENDORS MORATORIUM-RESOLUTION NO. 2012-40**  
A RESOLUTION OF THE CITY COMMISSION FOR THE CITY OF PALMETTO, FLORIDA EXTENDING THE MORATORIUM AS TO THE FILING AND/OR PROCESSING OF APPLICATIONS FOR TEMPORARY AND PORTABLE FOOD VENDORS ADOPTED PURSUANT TO ORDINANCE 2012-08; PROVIDING THAT SAID MORATORIUM SHALL

Palmetto City Commission  
December 3, 2012  
Page 3 of 4

BE IN EFFECT ENDING JUNE 30, 2013 OR SHALL TERMINATE ON THE EFFECTIVE DATE OF THE CITY'S ADOPTION OF LAND USE AND DEVELOPMENT REGULATIONS TO REGULATE TEMPORARY AND PORTABLE FOOD VENDORS; AND PROVIDING AN EFFECTIVE DATE.

Attorney Barnebey explained that this is a resolution to extend the moratorium for another six months while he works on drafting a new ordinance regarding temporary and portable food vendors.

**Motion:** Commissioner Cornwell moved, Commissioner Varnadore seconded, and the motion carried 5-0 to adopt Resolution No. 2012-40 extending the moratorium on temporary or portable food vendors for six (6) additional months ending June 30, 2013.

Mayor Bryant recessed the City Commission meeting at 8:09 p.m. to open the December 3, 2012 CRA Board meeting

Mayor Bryant reconvened the City Commission meeting at 8:22 p.m.

Commissioner Smith entered the meeting at 8:22 p.m.

#### 5. BASEBALL FIELD UPDATE

Mr. Vargas informed Commission that a site plan should be coming to them at the first meeting in 2013.

#### 6. ASR WELL UPDATE

Mr. Vargas stated the subcontractor has drilled down 280 feet of the main well. The main well will be drilled to a depth of 525 feet. He has met with the engineer and is happy with the progress.

#### 7. DEPARTMENT HEADS' COMMENTS

Mr. Barnebey—Received a draft agreement for the ball fields last Friday. He is in the process of reviewing that and will be bringing it to Commission shortly.

He has sent out an email to Mr. Freeman and Mr. Tusing regarding a new case that came out related to utility collections and the City's ability to require the property owner to maintain utility accounts rather than tenants.

Chief Wells—Congratulated the Mayor on another four-year term.

Mr. Freeman—Staff is still working on determining a usage fee for the use of electricity on 5<sup>th</sup> Street. He is proposing a \$25 dollar usage fee for the First Friday's event on December 7<sup>th</sup>. He is working with FPL to determine the actual usage fee and will have a better estimate of the cost to the City after the event on the 7<sup>th</sup>. The Special Function Permit will then be modified with the actual usage fee.

Staff is going to be purchasing iPads to create a paperless work environment. Agenda books will no longer be created once the iPad is in place. The goal is to have them for the January meeting. Mr. Freeman will be using funds from the IT Department and City Commission with a cost of approximately \$7,100.00.

Mr. Freeman reminded Commission of the special PBA meeting on December 18<sup>th</sup> at 5:30 p.m.

He congratulated the Mayor on another four-year term

Mr. Vargas—Congratulated the Mayor on her reelection.

#### 8. MAYOR'S REPORT

Mayor Bryant informed Commission of the Mobile Home Park Community Meeting dates.

She stated that she attended the Christmas in the Park event on Friday, and it was a success. She read a card from a citizen that stated he was very pleased with the Christmas in the Park event.

Mayor Bryant said it has been a pleasure working with everyone, and she looks forward to working another four years with everyone.

Palmetto City Commission  
December 3, 2012  
Page 4 of 4

**9. COMMISSIONERS' COMMENTS**

Commissioner Varnadore—Has received requests from citizens on the development of a dog park. Mr. Burton stated that the CRA could enhance Taylor Park located on 7<sup>th</sup> Street. He will bring more information back to Commission.

Stated she received an email from County Commissioner Whitmore regarding a meeting to be held in Alabama by the Gulf Coast Ecosystem Restoration Council. The meeting will be to discuss the allocation of funds related to the Deepwater Horizon oil spill. She asked that staff follow up with this email and inform Commission what information they find out related to the fund allocation.

Commissioner Williams—Would like to see a letter sent to the County regarding the membership requirements for the Tourist Development Council. He would like to have the County add a requirement for an elected official from the City of Palmetto be on the Council.

Commissioner Davis—Suggested that the Commission draft a letter to the County addressing the fact that they are not pleased with the rebranding of the Manatee County Civic Center. Mayor Bryant said she will write a letter and have each Commissioner sign it.

Commissioner Davis congratulated the Mayor on her reelection.

Commissioner Cornwell—Thanked the Mayor for her positive comments she made tonight during her opening statement.

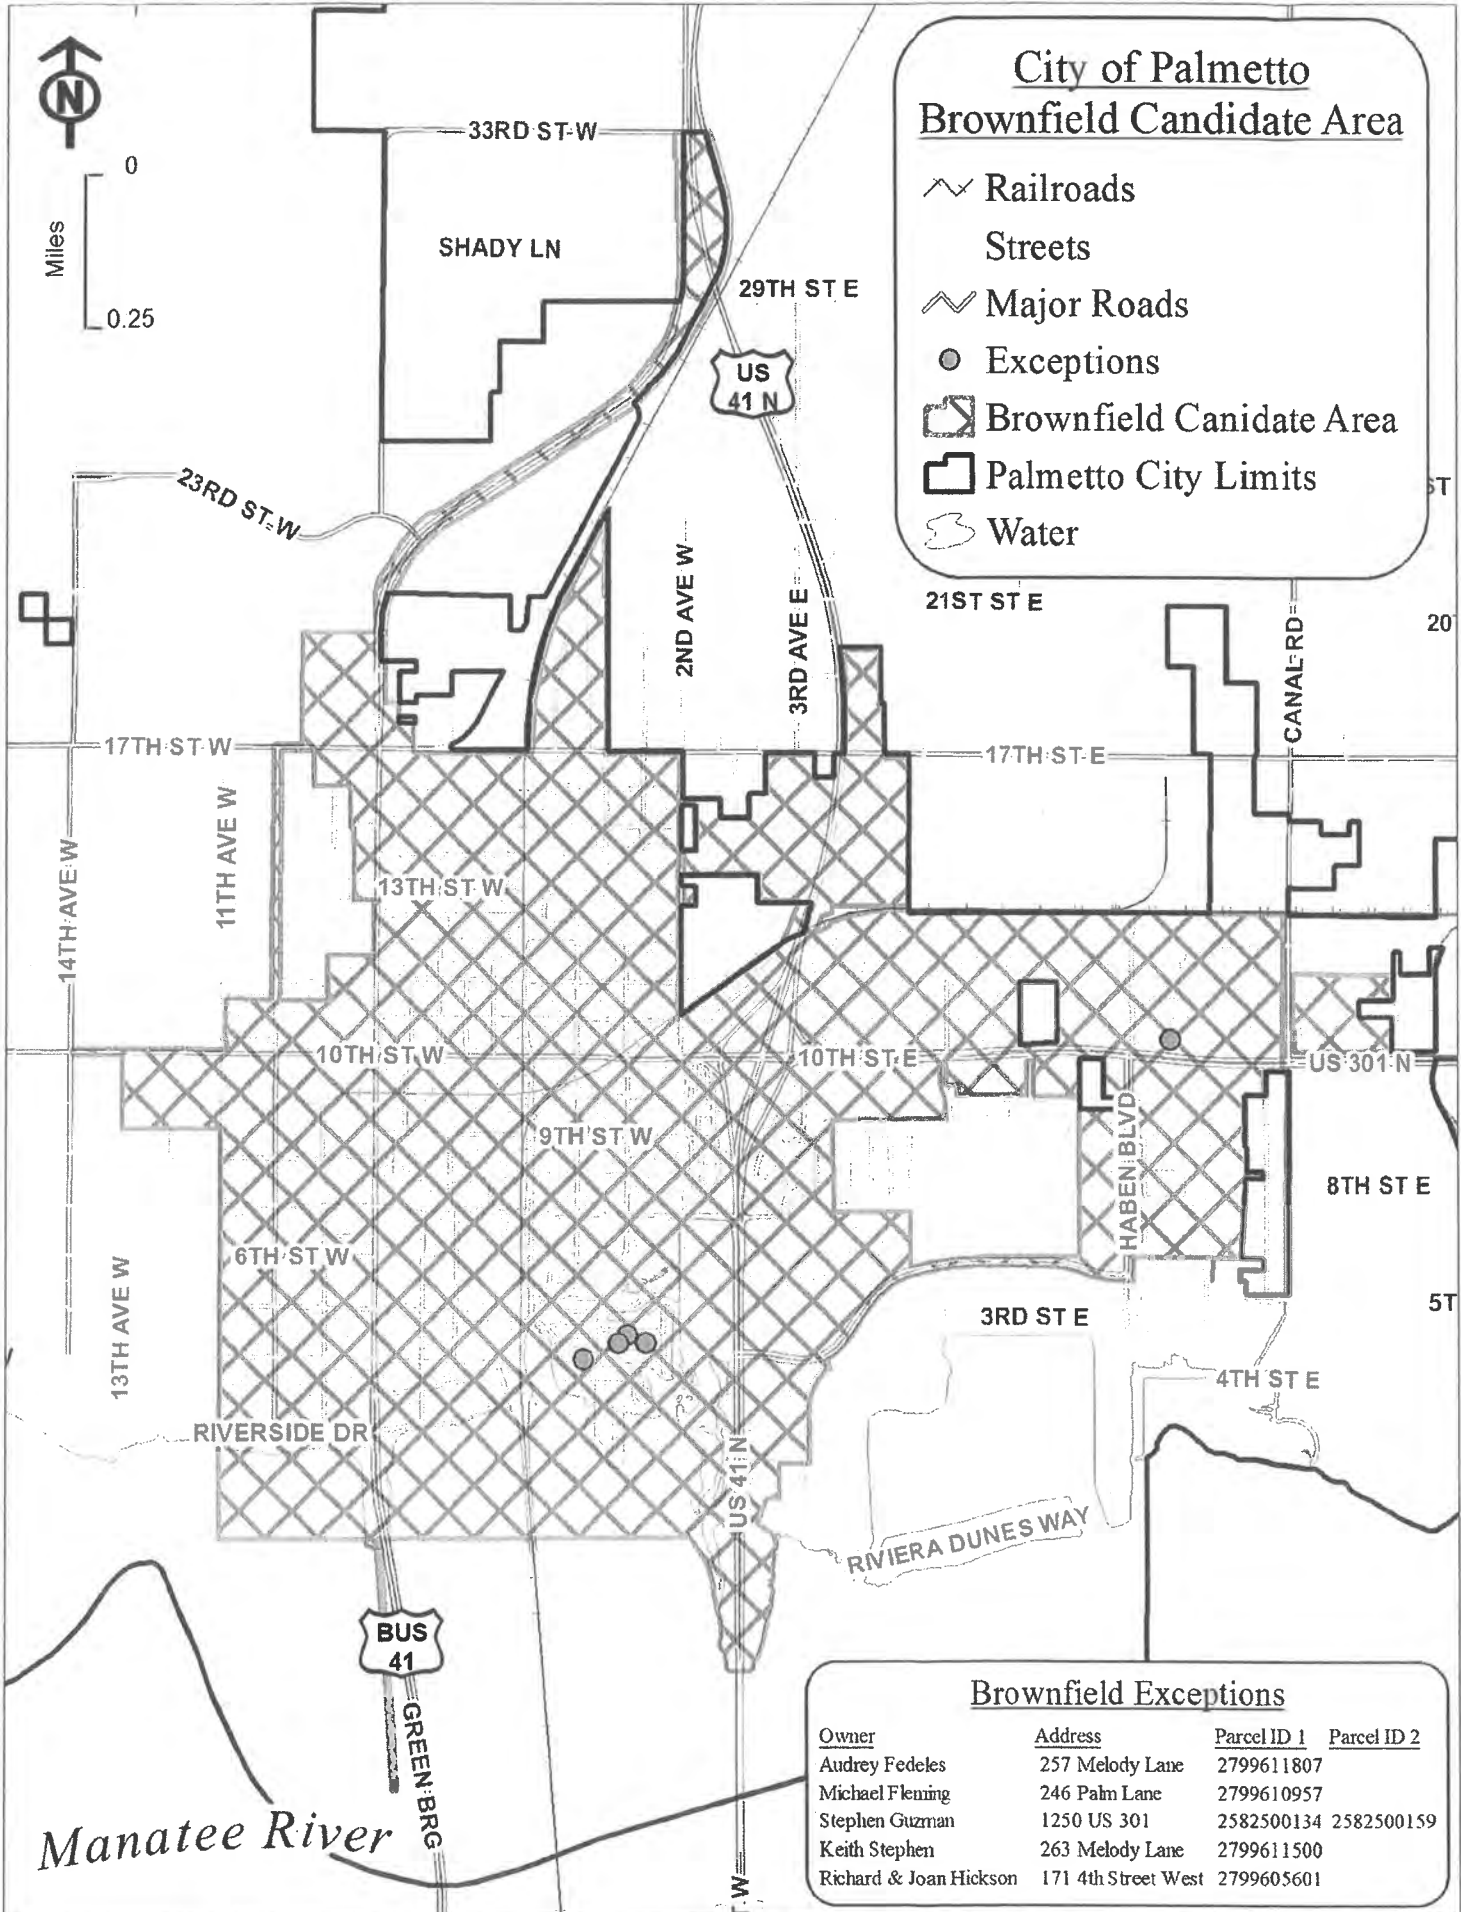

Commissioner Smith—Congratulated the Mayor on four more years.

Mayor Bryant adjourned the meeting at 8:54 p.m.

Minutes approved: January 7, 2013

Tampa, Florida 33619-4349

## 1.0 INTRODUCTION AND SCOPE OF WORK

Petroleum-impacted soil and groundwater were detected during replacement of the overfill buckets on the premium unleaded and diesel underground storage tanks (USTs) conducted on February 2, 2004, at 7-Eleven Store No. 33110 located at 208 U.S. Highway 41, Palmetto, Manatee County, Florida. As a result 7-Eleven, Inc. (7-Eleven) filed a Discharge Reporting Form (DRF) and contracted with Shaw Environmental, Inc. (Shaw) to conduct site assessment activities in accordance with Chapter 62-770, Florida Administrative Code. A copy of the Limited Closure Summary Report, which includes a copy of the DRF, is in **Appendix A**.

## 2.0 BACKGROUND

### 2.1 Area of Investigation

7-Eleven Store No. 33110 is located within Section 13, Township 34 South, Range 17 East of the United States Geological Survey Palmetto, Florida, Topographic Quadrangle. The site is located less than ½ mile north of the Manatee River with an average ground surface elevation of approximately 5 feet above mean sea level. A site location map is included as **Figure 1**.

The 7-Eleven retail building is located on the southeastern portion of the property. The site is primarily covered with concrete and asphalt. The current UST area is located in the northwest portion of the site adjacent to the dispenser islands. The site layout and adjacent land use are depicted on **Figure 2**.

### 2.2 Site Chronology

The following is a chronological summary of site assessment activities performed at the referenced facility:

- **February 2, 2004:** The premium unleaded and diesel overfill buckets were replaced at the referenced facility. Shaw conducted environmental monitoring.
- **February 16, 2004:** 7-Eleven submitted a DRF to the Manatee County Environmental Management Department, following the receipt of the laboratory analytical report.
- **March 4, 2004:** Shaw submitted a Limited Closure Summary Report to the Manatee County Environmental Management Department detailing the events of the overfill bucket replacements and Shaw's intent to conduct a site assessment.
- **April 13, 2004:** Shaw supervised the installation of six temporary wells (TW-1 through TW-6) with depths ranging from 10 feet below land surface (ft bls) to 13 ft bls using direct-push drilling methods. Groundwater and soil samples were collected.
- **August 6, 2004:** Shaw supervised the installation of one temporary well (TW-7) with a depth of 8 ft bls using direct-push drilling methods. One groundwater sample was collected.

### 3.0 SITE ASSESSMENT ACTIVITIES AND RESULTS

#### 3.1 Area Land Use and Water Well Survey

Shaw contacted the Southwest Florida Water Management District (SWFWMD) for records of wells within Sections 13, 14, 23, and 24 of Township 34 South, Range 17 East. Several private wells were listed by SWFWMD; however, no wells that were listed had addresses that were within ¼ mile of the subject property. Copies of the well permit lists from SWFWMD are in **Appendix B**.

Land use within ¼ mile of the facility is mainly commercial, residential, and undeveloped. The only commercial property immediately adjacent to the subject site is the Manatee Civic Center located to the north. Undeveloped property immediately bounds the property to the east, south, and west. The area land use is shown on **Figure 3**.

#### 3.2 Initial Investigation

On February 2, 2004, Shaw conducted environmental monitoring during the replacement of the premium unleaded and diesel overfill buckets at the site. Sixteen soil samples (SB-1 through SB-12, and SS-1 through SS-4) were collected from the excavation and screened on site for total organic vapors using an organic vapor analyzer (OVA) flame-ionization detector (FID). Four soil samples (SS-1, SS-2, SS-3, and SS-4) were submitted to Severn Trent Laboratories in Pensacola, Florida, and analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX) and methyl tertiary butyl ether (MTBE) by US Environmental Protection Agency (EPA) Method 8021, for polynuclear aromatic hydrocarbons (PAHs) by EPA Method 8310, and for total recoverable hydrocarbons (TRPH) by Florida Department of Environmental Protection (FDEP) Method FL-PRO. Laboratory results indicated that Soil Cleanup Target Levels (SCTLs) were exceeded in two samples, SS-3 and SS-4. A soil quality summary is in **Table 1**.

On February 2, 2004, one groundwater sample (GW-1) was collected from inside the open excavation and was analyzed for BTEX and MTBE by EPA Method 8021, for PAHs by EPA Method 8310, and for TRPH by FDEP Method FL-PRO. Analytical results indicated dissolved hydrocarbon concentrations exceeded Groundwater Cleanup Target Levels (GCTLs). A water quality summary is in **Table 3**. A Limited Closure Summary Report was prepared and submitted to the Manatee County Environmental Management Department on March 4, 2004, and is in **Appendix A**.

#### 3.3 Soil Sample Collection and Results

Shaw oversaw the installation of six temporary wells (TW-1 through TW-6) on April 13, 2004, and one temporary well (TW-7) on August 6, 2004, using direct-push drilling. The wells were installed to depths between 8 ft bls and 13 ft bls. The well locations are shown on **Figure 2**. The temporary well construction logs are in **Appendix C**. During the temporary well installations, soil samples were collected every two feet to two feet into the water table. The soil samples were screened onsite using a Photovac® OVA/FID. Each soil sample was screened for methane using a carbon filter.

The net OVA results indicated that petroleum vapors above the water table ranged from less than 10 parts per million (ppm) to 794.6 ppm. Three soil samples, TW-6 at 4 ft bls, TW-1 at 2 ft bls, and TW-2 at 2 ft bls, were collected from areas with low, medium, and high OVA readings, respectively. The soil

samples were sent to Accutest Laboratories in Orlando, Florida, and analyzed for BTEX and MTBE by EPA Method 8021, for PAHs by EPA Method 8310, and for TRPH by FDEP Method FL-PRO. The laboratory results show that no SCTLs were exceeded in any sample. A summary of the soil OVA and laboratory results is in **Table 2** and a copy of the soil laboratory report is in **Appendix D**. The highest OVA reading above the water table at each soil sample location is shown on **Figure 4**.

### 3.4 Groundwater Sampling and Results

Shaw collected groundwater samples from the geoprobe well points (TW-1 through TW-6) on April 13, 2004, and from TW-7 on August 6, 2004, and sent them to Accutest Laboratories for analysis. Groundwater samples TW-1, TW-2, TW-3, TW-5, TW-6, and TW-7 were analyzed for BTEX and MTBE by EPA Method 8021, for PAHs by EPA Method 8310, and for TRPH by FDEP Method FL-PRO. Because of a very slow recharge rate, TW-4 was only analyzed for BTEX and MTBE by EPA Method 8021.

The analytical results indicated that dissolved hydrocarbon concentrations did not exceed any GCTLs in any location. Dissolved hydrocarbon concentrations are depicted on **Figure 5**. Groundwater quality results are summarized in **Table 3**. The groundwater laboratory reports and FDEP groundwater sampling logs for TW-1 through TW-6 are in **Appendix D**.

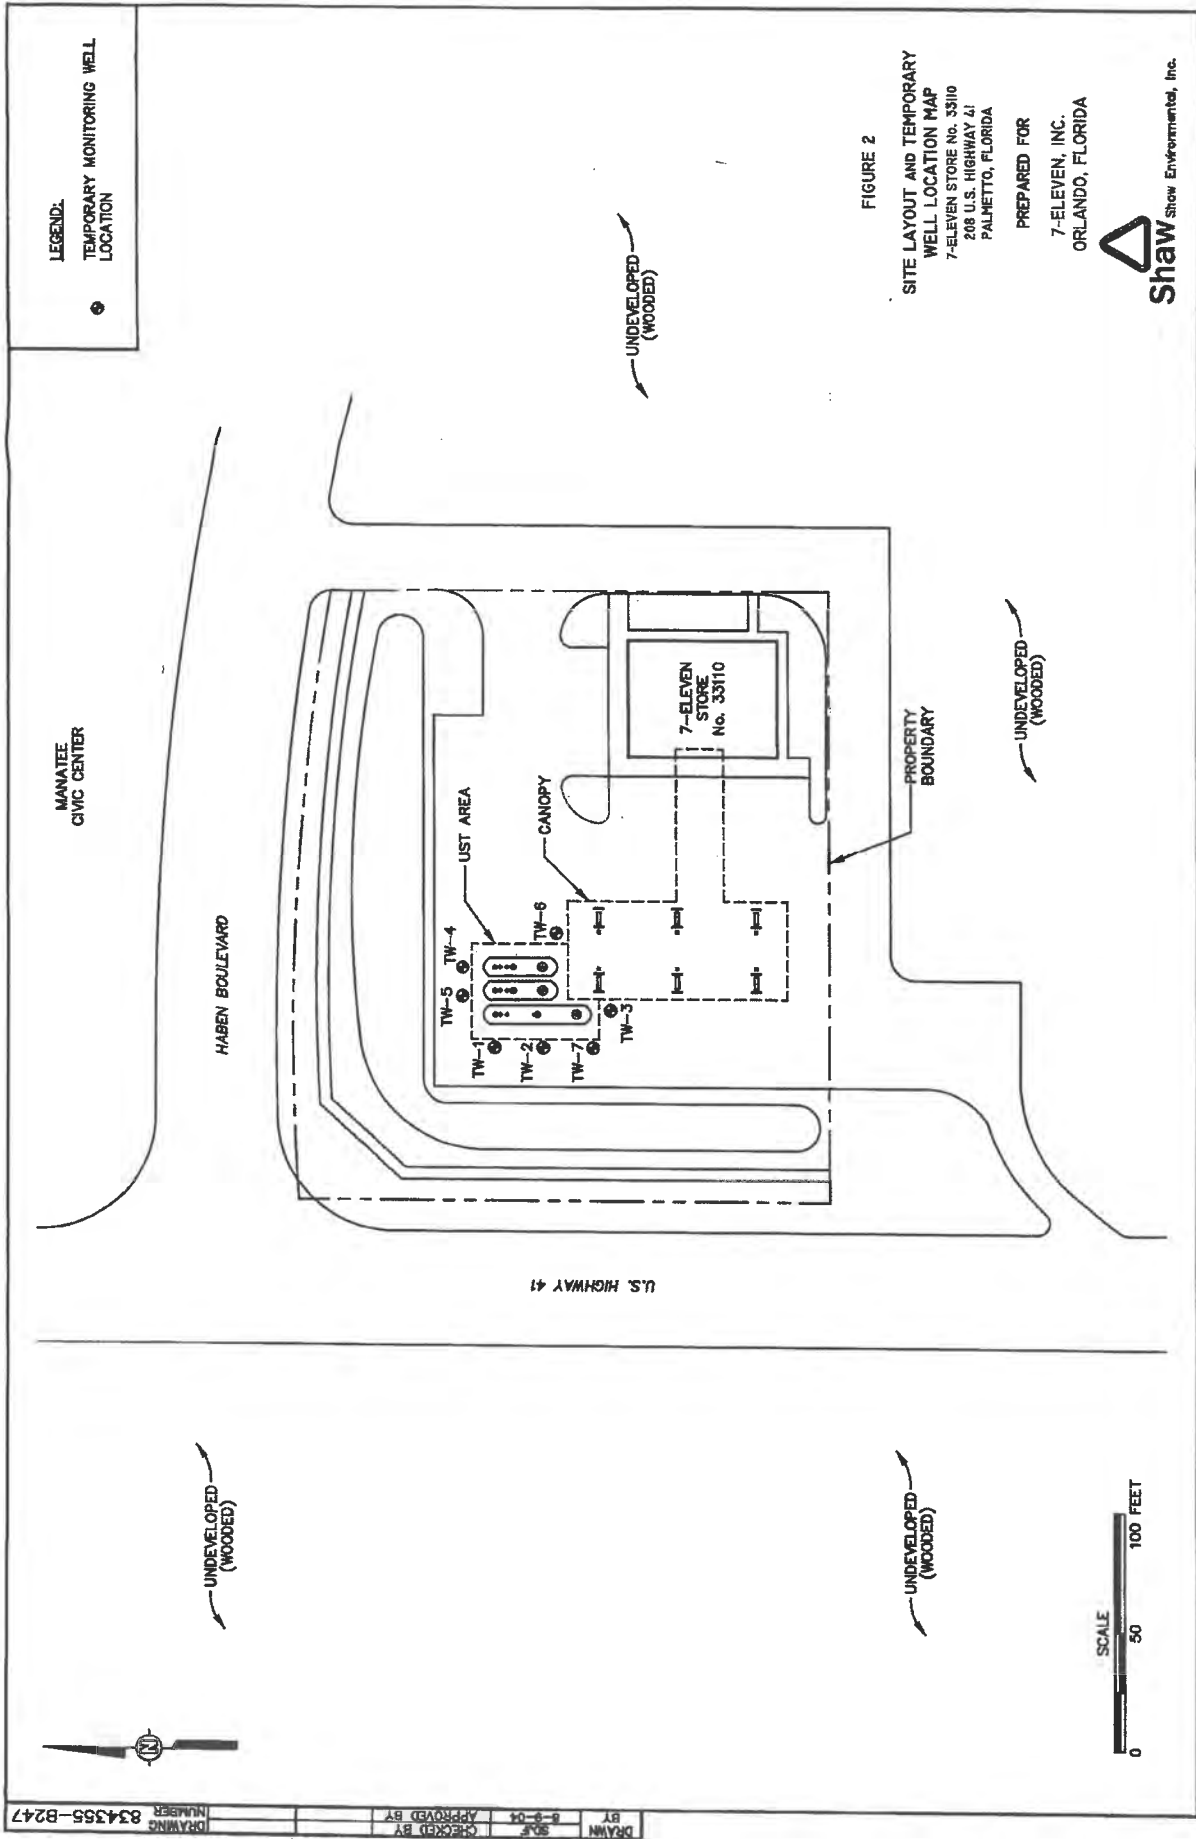

### 3.5 Site Geology

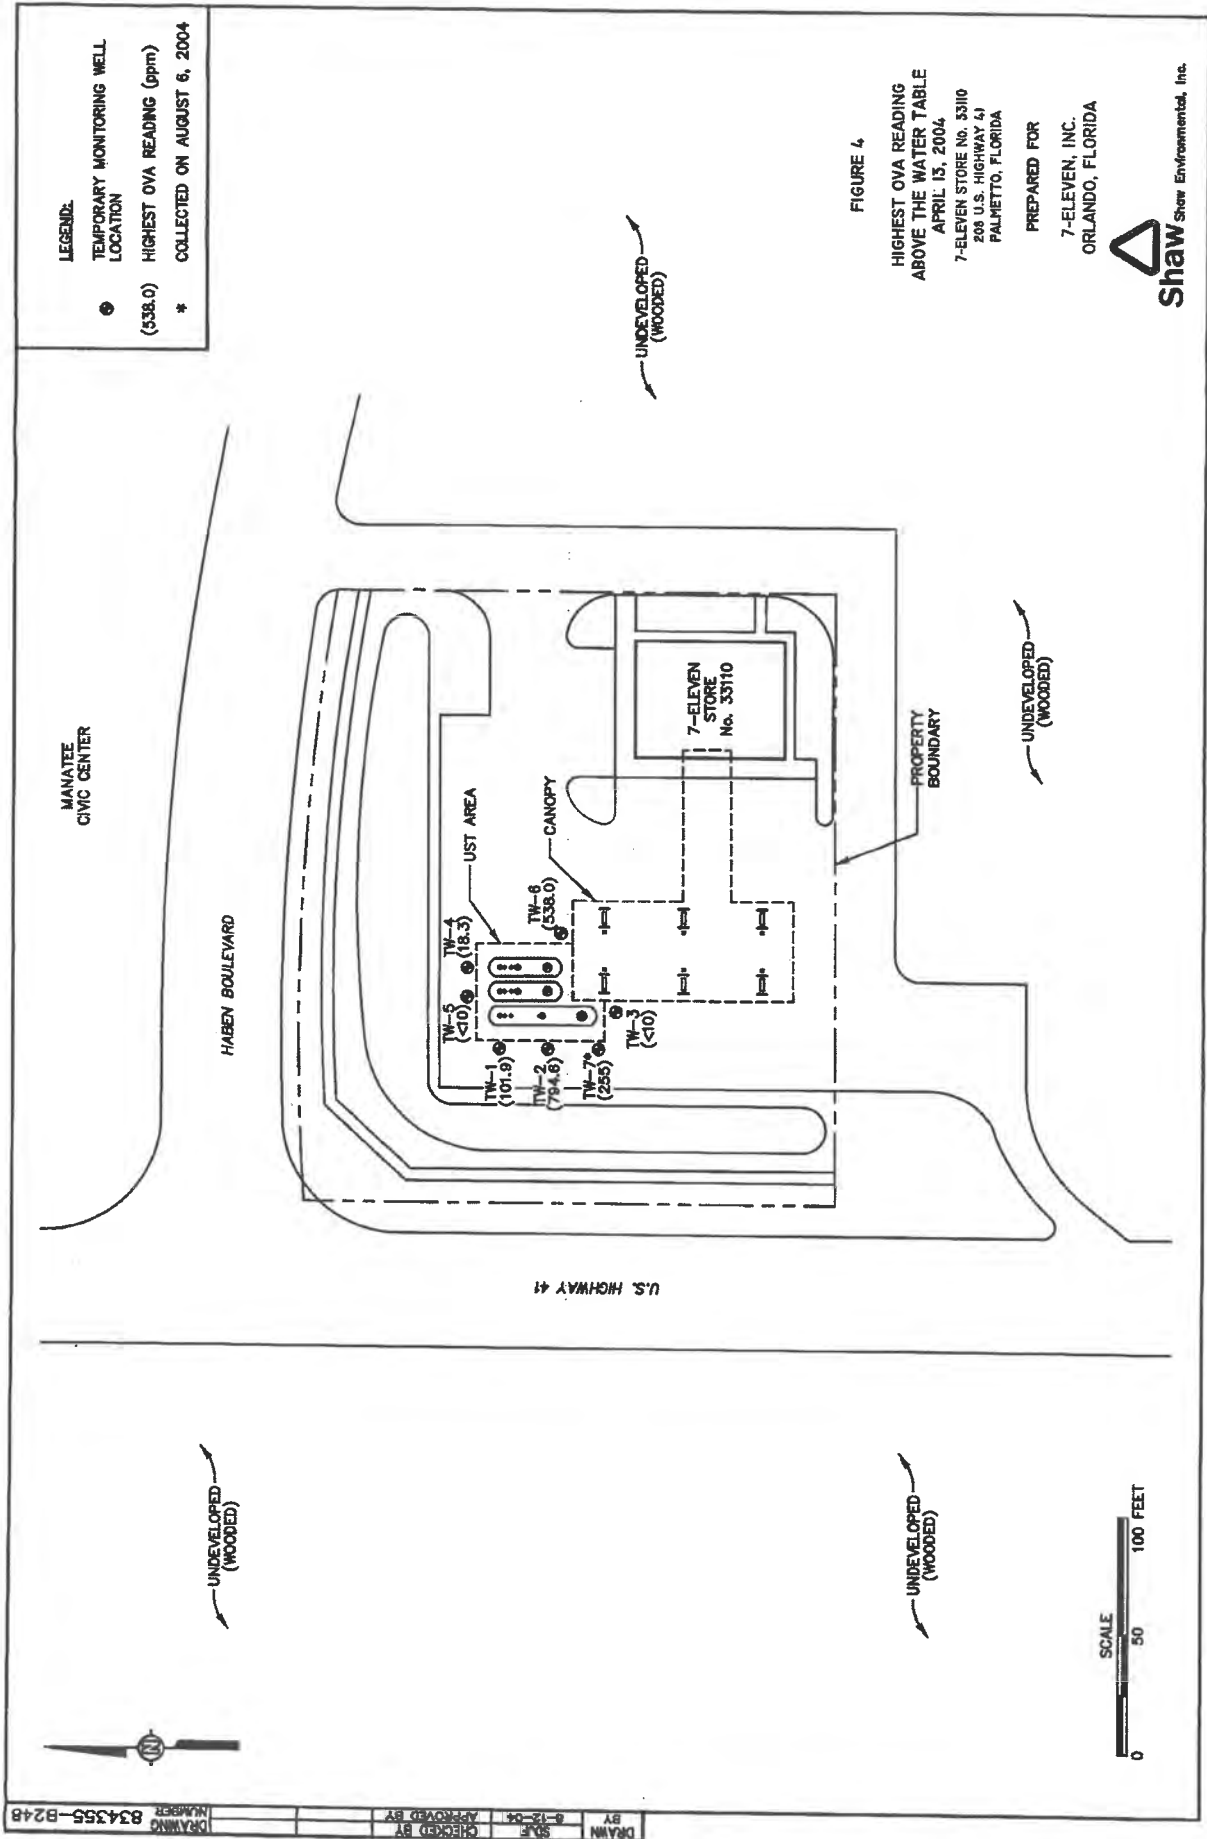

Data collected during the assessment activities indicates that alternating regressive and transgressive sequences underlie the site. Varying thicknesses of sand, clay, and limestone are interbedded to a depth of 13 ft bls. Temporary well construction and geologic logs are in **Appendix C**.

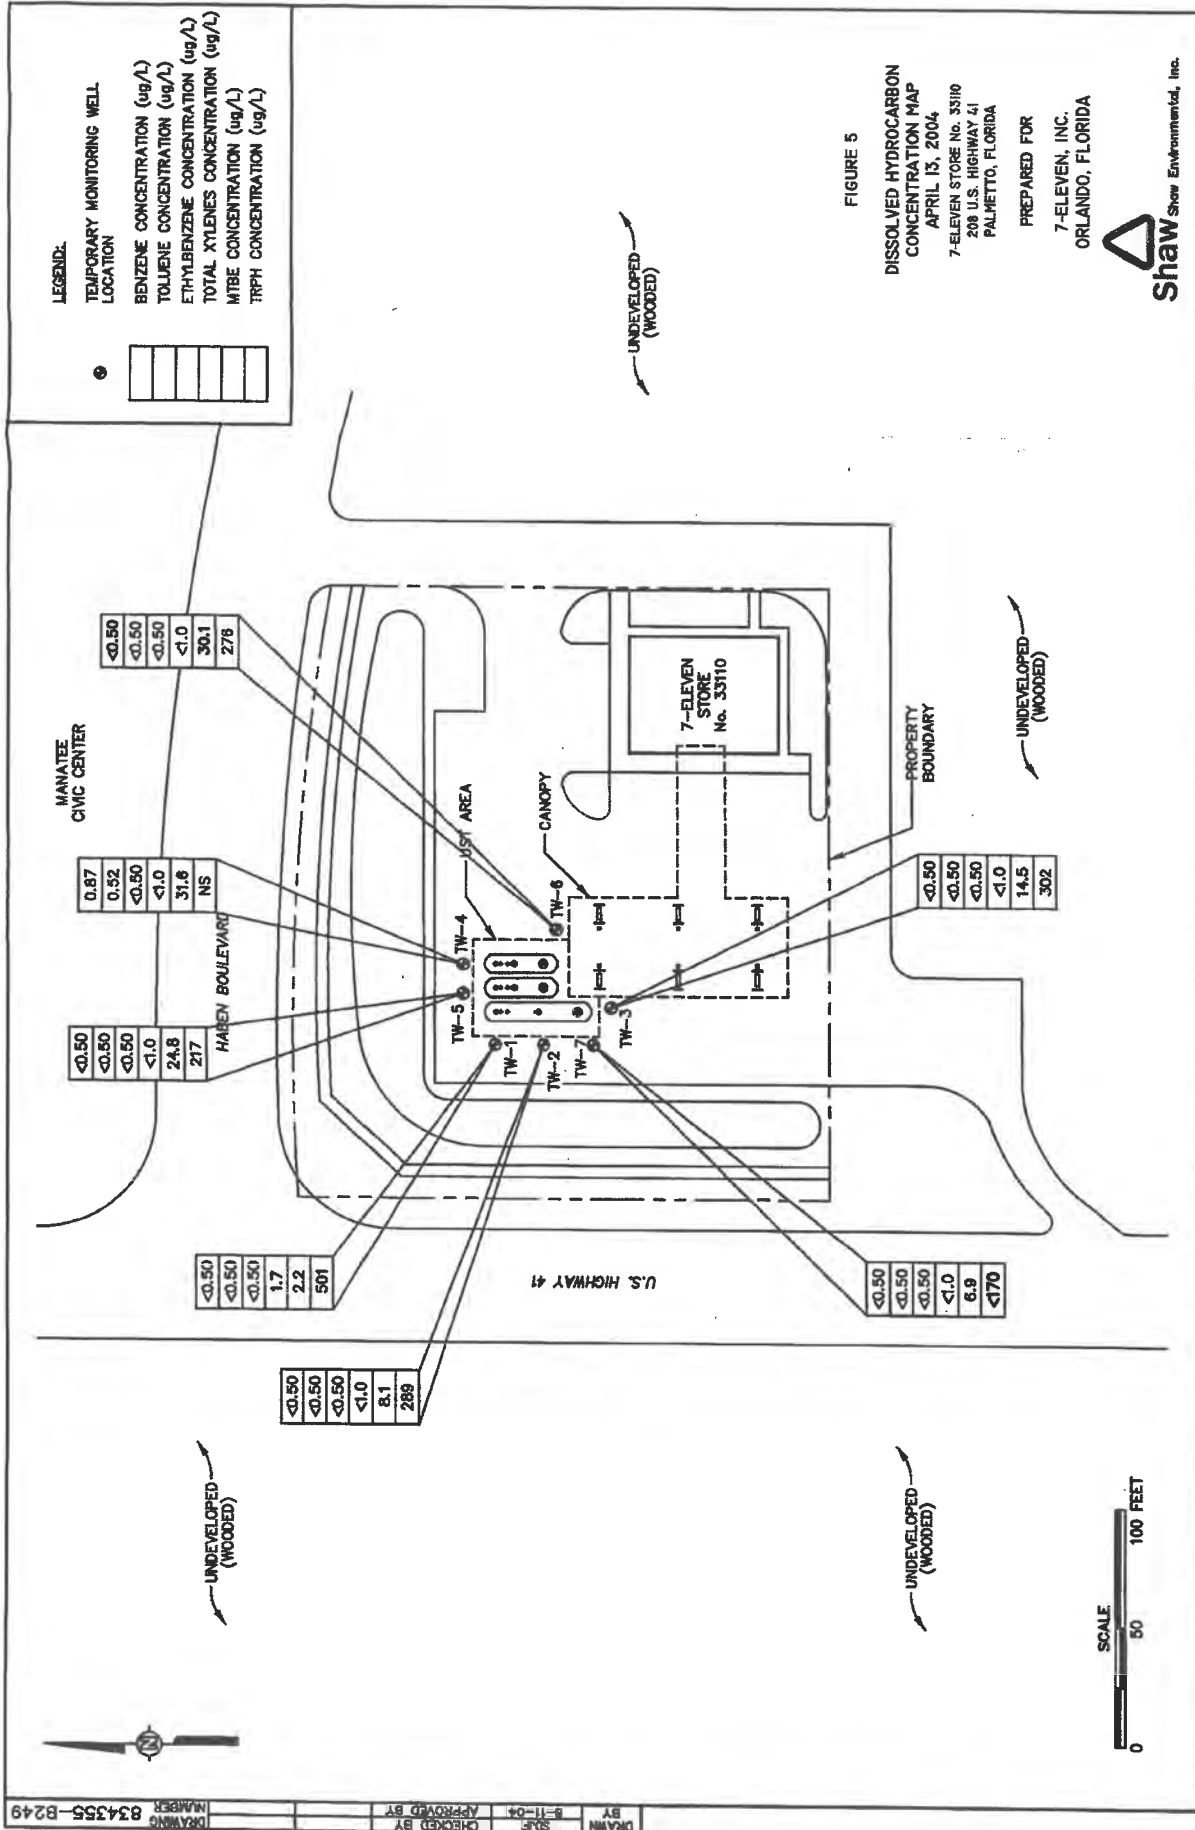

## 4.0 SUMMARY AND RECOMMENDATIONS

- No private wells are located within ¼ mile of the facility.
- Soil samples collected from areas with low, medium, and high OVA readings and submitted for laboratory analysis did not exceed any SCTLs. ✓
- Groundwater samples collected from TW-1 through TW-6 did not exceed any GCTLs. ✓

Based on these results, Shaw recommends No Further Action at this site. ✓

Mr. Ken Hilliard  
Manager of Environmental Services  
7-Eleven, Inc. (Loc. 0150)  
P.O. Box 711  
Dallas, TX 75221-0711

Subject: Site Rehabilitation Completion Order  
7-Eleven Store # 33110  
208 US Highway 41  
Palmetto, Manatee County, Florida  
FDEP ID# 419804045  
Discharge Date: 2/16/2004

Dear Mr. Hilliard:

John Vargo at the Bureau of Petroleum Storage Systems, Petroleum Cleanup Section 5, has reviewed the Site Rehabilitation Completion Report (SRCR) and No Further Action Proposal (NFAP), dated January 29, 2008 (received January 30, 2008), prepared and submitted by Shaw Environmental, Inc. for the petroleum product discharge referenced above. Documentation submitted with the SRCR/NFAP confirms that criteria set forth in Subsection -770.680(1), Florida Administrative Code (F.A.C.), have been met. Please refer to the attached map of the source property and analytical summary table. The SRCR/NFAP is hereby incorporated by reference in this Site Rehabilitation Completion Order (Order). Therefore, you are released from any further obligation to conduct site rehabilitation at the facility for petroleum product contamination associated with the discharge referenced above, except as set forth below.

- 1) In the event concentrations of petroleum products' contaminants of concern increase above the levels approved in this Order, or if a subsequent discharge of petroleum or petroleum product occurs at the facility, the Florida Department of Environmental Protection (Department) may require site rehabilitation to reduce concentrations of petroleum products' contaminants of concern to the levels approved in the SRCR/NFAP or otherwise allowed by Chapter 62-770, F.A.C.
- 2) Additionally, you are required to properly abandon all monitoring wells, except compliance wells utilized to meet the release detection requirements of Chapter

"More Protection, Less Process"

7-Eleven #33110  
FDEP Facility ID# 419804045

Page two

62-761 or 62-762, F.A.C., within 60 days of receipt of this Order. The monitoring wells must be plugged and abandoned in accordance with the requirements of Subsection 62-532.500(4), F.A.C.

### Legal Issues

The Department's Order shall become final unless a timely petition for an administrative hearing is filed under Sections 120.569 and 120.57, Florida Statutes (F.S.), within 21 days of receipt of this Order. The procedures for petitioning for an administrative hearing are set forth below.

Persons affected by this Order have the following options:

- 1) If you choose to accept the Department's decision regarding the SRCR/NFAP you do not have to do anything. This Order is final and effective as of the date on the top of the first page of this Order.
- 2) If you choose to challenge the decision, you may do the following:
  - a) File a request for an extension of time to file a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order; such a request should be made if you wish to meet with the Department in an attempt to informally resolve any disputes without first filing a petition for an administrative hearing; or
  - b) File a petition for an administrative hearing with the Department's Agency Clerk in the Office of General Counsel within 21 days of receipt of this Order.

Please be advised that mediation of this decision pursuant to Section 120.573, F.S., is not available.

### How to Request an Extension of Time to File a Petition for an Administrative Hearing

For good cause shown, pursuant to Subsection 62-110.106(4), F.A.C., the Department may grant a request for an extension of time to file a petition for an administrative hearing. Such a request must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from 7-Eleven, Inc., shall mail a copy of the request to 7-Eleven, Inc. at the time of filing. Timely filing a request for an extension of time tolls the time period within which a petition for an administrative hearing must be made.

7-Eleven #33110  
FDEP Facility ID# 419804045

Page three

### How to File a Petition for an Administrative Hearing

A person whose substantial interests are affected by this Order may petition for an administrative hearing under Sections 120.569 and 120.57, F.S. The petition must contain the information set forth below and must be filed (received) by the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, within 21 days of receipt of this Order. Petitioner, if different from 7-Eleven, Inc., shall mail a copy of the petition to 7-Eleven, Inc. at the time of filing. Failure to file a petition within this time period shall waive the right of anyone who may request an administrative hearing under Sections 120.569 and 120.57, F.S.

Pursuant to Subsection 120.569(2), F.S. and Rule 28-106.201, F.A.C., a petition for an administrative hearing shall contain the following information:

- 1) The name, address, and telephone number of each petitioner; the name, address, and telephone number of the petitioner's representative, if any; the facility owner's name and address, if different from the petitioner; the FDEP facility number, and the name and address of the facility;
- 2) A statement of when and how each petitioner received notice of the Department's action or proposed action;
- 3) An explanation of how each petitioner's substantial interests are or will be affected by the Department's action or proposed action;
- 4) A statement of the disputed issues of material fact, or a statement that there are no disputed facts;
- 5) A statement of the ultimate facts alleged, including a statement of the specific facts the petitioner contends warrant reversal or modification of the Department's action or proposed action;
- 6) A statement of the specific rules or statutes the petitioner contends require reversal or modification of the Department's action or proposed action; and
- 7) A statement of the relief sought by the petitioner, stating precisely the action petitioner wishes the Department to take with respect to the Department's action or proposed action.

This Order is final and effective as of the date on the top of the first page of this Order. Timely filing a petition for an administrative hearing postpones the date this Order takes effect until the Department issues either a final order pursuant to an administrative hearing or an Order Responding to Supplemental Information provided to the Department pursuant to meetings with the Department.

### Judicial Review

Any party to this Order has the right to seek judicial review of it under Section 120.68, F.S., by filing a notice of appeal under Rule 9.110 of the Florida Rules of Appellate Procedure with the Department's Agency Clerk in the Office of General Counsel at 3900 Commonwealth

7-Eleven #33110  
FDEP Facility ID# 419804045

Page four

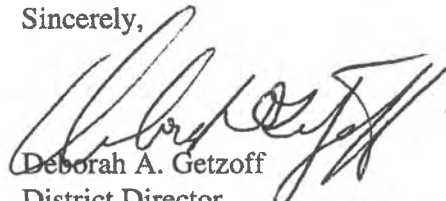

Boulevard, Mail Station 35, Tallahassee, Florida, 32399-3000, and by filing a copy of the notice of appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice of appeal must be filed within 30 days after this Order is filed with the Department's clerk (see below).

Questions

Any questions regarding the Department's review of your SRCR/NFAP should be directed to Alison Meetze at (813) 632-7600, ext. 493 or John Vargo at (850) 222-6446, ext. 248. Questions regarding legal issues should be referred to the Department's Office of General Counsel at (850) 245-2242. Contact with any of the above does not constitute a petition for an administrative hearing or a request for an extension of time to file a petition for an administrative hearing.

The FDEP Facility Number for this facility is 419804045. Please use this identification on all future correspondence with the Department.

Sincerely,

Deborah A. Getzoff  
District Director  
Southwest District

I have reviewed the Request for No Further Action (NFA) Determination dated January 29, 2008, (received by the Southwest District in Tampa on January 30, 2008, and by the Bureau of Petroleum Storage Systems in Tallahassee on February 4, 2008). Shaw Environmental, Inc. (SHAW) prepared the Fifth Semi-Annual Natural Attenuation Monitoring (NAM) Report Addendum as authorized by Mr. Ken Hilliard of 7-Eleven, Inc.

The referenced documents correspond to: (1) Limited Closure Summary Report dated March 4, 2004; (2) Site Assessment Report (SAR) dated August 12, 2004; (3) SAR Response to Comments dated November 18, 2004; (4) SARA Response to Comments dated May 26, 2005; (5) Department's NAMP Approval Order dated August 12, 2005; (6) First Semi-Annual NAM Results report dated September 27, 2005; (7) Third Semi-Annual NAM Results report dated September 22, 2006; (8) Fifth Semi-Annual NAM Report dated September 5, 2007; and, (9) Fifth Semi-Annual NAM Report Addendum dated January 29, 2008.

### Summary of Findings

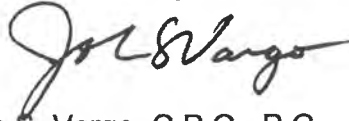

- 1) Summary of Soil Conditions (Spill Buckets)
  - a) Analysis of soil samples collected from the overfill bucket excavations in February 2004 revealed that concentrations of MTBE were detected in sample SS-3 at 3.5 feet depth at levels exceeding soil cleanup target levels (SCTLs) for leachability. Soil sample SS-3 was collected from the premium unleaded (PUL) gasoline overfill bucket excavation.
  - b) In order to achieve closure, sites need to either achieve the SCTLs or implement institutional controls. There are no special accommodations in the rule for exceptions due to practicality considerations. Hence, consideration for institutional controls is necessary if SCTLs cannot be achieved by active remediation or natural attenuation.
  - c) As previously stated, issues pertaining to a NFA with Conditions, due to soil conditions at PUL gasoline spill bucket location, may not be resolvable until the tanks are upgraded in the future.
- 2) Based on review of the Fifth Semi-Annual NAM Report Addendum dated January 29, 2008, the following was noted:
  - a) As previously stated, analysis of groundwater samples MW-1 to MW-4 collected on July 16, 2007, revealed that no contaminants of concern were detected at levels exceeding groundwater cleanup target levels (GCTLs) for the second consecutive semi-annual monitoring event.
  - b) On November 7, 2007, verification spill bucket soil borings SB-1 and SB-2 were performed down to 3.5 feet depth for collection of verification spill bucket soil samples for analysis. Field screening soil samples with an OVA revealed readings of zero parts per million (ppm). Verification spill bucket soil samples SB-1 (2') and SB-2 (2') were collected for analysis of BTEX/MTBE and PAHs.
    - i) Analysis of verification spill bucket soil samples SB-1 (2') and SB-2 (3') revealed that no contaminants of concern were detected at levels exceeding SCTLs for BTEX/MTBE and/or PAHs.
  - c) On January 14, 2008, verification spill bucket soil boring SB-3 was performed near soil boring SB-2 down to 3.5 feet depth for collection of verification spill bucket soil samples for analysis. Field screening soil samples with an OVA revealed readings of zero ppm. Verification spill bucket soil sample SB-3 (3') was collected for analysis by FL-PRO.
    - i) Analysis of verification spill bucket soil sample SB-3 (3') revealed that no contaminants of concern were detected at levels exceeding SCTLs for TRPH.

Based on my review of the referenced documents, a recommendation for NFA without conditions is appropriate for this area of the subject site (discharge #1 at spill buckets dated February 16, 2004) and that a Site Rehabilitation Completion Order (SRCO) should be issued by the Department, as this report has met the SAR requirements for assessment of soil and groundwater conditions per Chapter 62-770.600, F.A.C. and the NFA without conditions requirements of Chapter 62-770.680, F.A.C.

Mr. Burkhart:

The purpose of this report is to present the results of an asbestos survey and protective coating survey performed on July 13, 2011, at the above referenced project. We understand that this survey was requested due to the planned renovation and/or demolition of the structure.

**Regulated Asbestos Containing Materials (RACM) were identified at the site. Please refer to the attached report for details.**

Tierra appreciates the opportunity to provide this service to HNTB. If you have any questions regarding this report, please contact our office at your earliest convenience.

Respectfully Submitted,

## EXECUTIVE SUMMARY

Tierra, Inc. (Tierra) conducted an asbestos and protective coating survey of the Hernando Desoto Bridge, which crosses the Manatee River. The structure is located on US 41, in Manatee County, Florida. The bridge is identified as FDOT Structure Number 130053. It is our understanding that the FDOT is planning to renovate and/or demolish the bridge structure. The purpose of this survey was to identify and sample suspect asbestos-containing materials (ACM) and heavy metals based protective coatings to provide information regarding the identity, location, condition and approximate quantities of these materials so that proper remediation and disposal methods can be evaluated.

The survey was conducted on July 13, 2011 by an Asbestos Hazard Emergency Response Act (AHERA) accredited inspector in general accordance with the sampling protocols established in Environmental Protection Agency (EPA) 40 Code of Federal Regulations (CFR) 763. Seventeen (17) bulk samples were collected from five (5) homogeneous areas of suspect ACM. Chrysotile asbestos was identified at 1.5% in the felt paper located between the end bents and the bridge decking. This material was determined to be friable and classified as Regulated Asbestos Containing Material (RACM) per National Emission Standards for Hazardous Air Pollutants (NESHAP). Additionally, residual felt paper strips, observed on the underside of the decking, were found to contain less 1% chrysotile asbestos. The strips were presumably used to tape cracks in the deck forms and remained adhered to the concrete after the removal of the forms.

Steel bearing plates at the bridge we observed to be painted. The paint did not contain lead in a quantity to meet EPA's definition of Lead Based Paint (LBP).

## 1.0 INTRODUCTION

Tierra, Inc. (Tierra) conducted an asbestos and protective coating survey of the Hernando Desoto Bridge, which crosses the Manatee River. The structure is located on US 41, in Manatee County, Florida. The bridge is identified as FDOT Structure Number 130053. The survey was conducted on July 13, 2011 by an Asbestos Hazard Emergency Response Act (AHERA) accredited asbestos inspector. Suspect asbestos-containing material (ACM) samples were collected in general accordance with the sampling protocols outlined in EPA regulation 40 CFR 763. Samples were delivered to an accredited laboratory for analysis by polarized light microscopy.

### 1.1 Project Objective

We understand this asbestos survey was requested due to the planned renovation and/or demolition of the existing bridge structure. EPA regulation 40 CFR 61, Subpart M, National Emission Standards for Hazardous Air Pollutants (NESHAP), prohibits the release of asbestos fibers and other hazardous air pollutants to the atmosphere during renovation or demolition activities. The asbestos NESHAP requires that potentially regulated asbestos-containing building materials be identified, classified and quantified prior to planned disturbances or demolition activities. No previous reports or design plans were provided.

## 2.0 BRIDGE DESCRIPTION

The date for the construction of the bridge is unknown. The bridge is a cast in place, concrete beam, raised span bridge, consisting of four (4) lanes, two lanes servicing north and south bound traffic. It is approximately 2,250 feet in length and 60 feet in width. It is constructed on driven concrete piles with concrete piers and bent caps supporting concrete beams and a cast in place concrete bridge deck. Both sides are lined with concrete curbing and concrete guardrails. Guardrails at the approaches are galvanized "W" channel steel on wood posts.

## 3.0 FIELD ACTIVITIES

The survey was conducted by Mr. Scott Crandall, PE, an AHERA-accredited asbestos inspector. A copy of Mr. Crandall's asbestos inspector certificate is presented in **Appendix C**. The survey was conducted in general accordance with the sample collection protocols established in EPA regulation 40 CFR 763, the AHERA. A summary of the survey activities performed is provided below. The survey was limited to areas accessible by foot and included the bridge surface and underneath the structure at both end of the bridge.

### 3.1 Visual Assessment

Our survey activities began with visual observation of the structure to identify homogeneous areas of suspect ACM and painted coatings. A homogeneous material consists of building materials that appear similar throughout in terms of color, texture and date of application. Building materials identified as steel, concrete, glass, wood, masonry, metal or rubber were not considered suspect ACM. If surfaces are painted and/or otherwise covered with protective coating those materials are noted and sampled.

NESHAP Asbestos and Protective Coatings Survey Report  
Hernando DeSoto Bridge (No. 130053)  
FPID: 425033-1-22-01  
Page 2 of 6

### 3.2 Physical Assessment

A physical assessment of each homogeneous area of suspect ACM was conducted to assess the friability and condition of the materials. A friable material is defined by the EPA as a material which can be crumbled, pulverized or reduced to powder by hand pressure when dry. Friability was assessed by physically touching suspect materials.

### 3.3 Sample Collection

Based on results of the visual observation, bulk samples of suspect ACM and protective coatings were collected in general accordance with AHERA sampling protocols. Representative samples of suspect materials were collected in each homogeneous area. Tierra personnel collected bulk samples using wet methods as applicable to reduce the potential for fiber release. Samples were placed in sealable containers and labeled with unique sample numbers using an indelible marker.

Seventeen (17) bulk samples were collected from five (5) homogeneous materials of suspect ACM. A summary of suspect ACM samples collected during the survey is included in Section 5.0.

A visual inspection of the structure for protective coatings and painted surfaces indicated the steel bearing plates were painted. One (1) sample of the paint was collected for heavy metals analysis.

### 3.4 Sample Analysis

Bulk samples of ACM were submitted under chain of custody to Dove Environmental Corporation (Dove) of Miami, Florida for analysis by polarized light microscopy with dispersion staining techniques per EPA methodology (40 CFR 763, Subpart F). The percentage of asbestos, where applicable, was determined by microscopic visual estimation. Dove is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP Accreditation No. 102053-0).

The U.S. Environmental Protection Agency (USEPA) and the Occupational Safety and Health Administration (OSHA) define asbestos containing material (ACM) as any material which contains greater than one percent asbestos. When samples analyzed by Polarized Light Microscopy contain asbestos in amounts less than ten percent (< 10%), a more exact method of analysis called point counting may be performed at the client's request. The EPA point count method allows a sample in which asbestos was visually detected, but which is visually estimated to have 10% or less asbestos, to be quantified using a point count procedure. If not point counted, a sample in which asbestos was visually detected and estimated (including trace to  $\leq 1\%$ ) must be assumed to be greater than 1% and treated as an ACM. The EPA point counting procedure is as follows: an ocular reticule (cross hair or point array) is used to visually superimpose a point or points on the microscope field of view. A total of 400 points superimposed on either asbestos fibers or non-asbestos matrix material must be counted over at least eight different preparations of representative sub-samples. If an asbestos fiber and matrix particle overlap so that a point is superimposed on their visual intersection, a point is scored for both categories. Point counting provides a quantification of the area percent asbestos. Per EPA's regulations, materials which have been point-counted and, therefore, quantitatively determined to have less than or equal to one percent ( $\leq 1\%$ ) asbestos, can be treated as non-ACM. **No samples were point counted during this survey.**

## **4.0 REGULATORY OVERVIEW**

### **4.1 Asbestos Regulations**

The asbestos NESHAP (40 CFR Part 61, Subpart M) regulates asbestos fiber emissions and asbestos waste disposal practices. It also requires the identification and classification of existing building materials prior to demolition or renovation activity. Under NESHAP, asbestos-containing building materials are classified as either friable, Category I non-friable or Category II non-friable ACM. Friable materials are those that, when dry, may be crumbled, pulverized or reduced to powder by hand pressure. Category I non-friable ACM includes packings, gaskets, resilient floor coverings and asphalt roofing products containing more than 1% asbestos. Category II non-friable ACM are any materials other than Category I materials that contain more than 1% asbestos.

Friable ACM, Category I and Category II non-friable ACM which are in poor condition and has become friable or which will be subjected to drilling, sanding, grinding, cutting or abrading and which could be crushed or pulverized during anticipated renovation or demolition activities are considered regulated ACM (RACM).

In the State of Florida, asbestos activities are regulated by the Florida Department of Environmental Protection (FDEP). RACM must be removed prior to demolition activities which will disturb the materials. The owner or operator must provide the FDEP with written notification of planned removal activities at least 10 working days prior to the commencement of asbestos abatement activities. Removal of RACM must be conducted by a State of Florida licensed asbestos abatement contractor.

The OSHA Asbestos standard for construction (29 CFR 1926.1101) regulates workplace exposure to asbestos. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work.

### **4.2 Metals Based Protective Coatings and Lead Based Paint Regulations**

Cadmium, chromium, zinc and lead have historically been used in paints and coating. Specific regulations regarding lead based paints have been developed by the USEPA. Lead-based paint is defined as a surface coating or paint containing lead in excess of 1.0 milligram per square centimeter ( $\text{mg}/\text{cm}^2$ ) or 0.5% by weight (USEPA Toxic Substance Control Act, Section 401). 0.5% is equivalent to 5000 parts per million (ppm). Based on regulations contained in the Lead-Based Paint Poisoning Prevention Act (LBPPPA) and promulgated by the Consumer Product Safety Commission (CPSC), lead-based paint is defined as paint containing more than 0.06% lead as of June 1977. In 1978, the CPSC banned the sale of lead-based paint to consumers.

Under EPA regulations lead, chromium and cadmium impacted wastes generated during abatement activities are handled as either a solid waste or a hazardous waste, depending on the amount and form of each of the heavy metals. If the maximum level of the metal in an extract of a representative sample of the waste stream proposed for disposal, as determined by

**NESHAP Asbestos and Protective Coatings Survey Report**  
**Hernando DeSoto Bridge (No. 130053)**  
**FPID: 425033-1-22-01**  
**Page 4 of 6**

a Toxicity Characteristic Leaching Procedure (TCLP) laboratory analysis, is less than the regulatory level set in 40 CFR 261.24, then EPA regulations allow the material to be disposed of as solid waste at a solid waste landfill. If the TCLP analysis equals or exceeds the regulatory level, the material must be managed as a hazardous waste. The regulatory levels for cadmium, chromium and lead are 1.0, 5.0 and 5.0 milligram per liter (mg/L), respectively. Impacted materials that are recycled, such as painted steel beams sent to a scrap metal yard, are not considered waste; therefore, they are exempt from waste disposal regulations; however, other occupational and recycling regulations may apply.

The OSHA established the Lead Standard for the Construction Industry, 29 CFR 1926.62, which applies to all construction work where an employee may be exposed to lead. These exposures include demolition and salvage of structures where lead or material containing lead are present and removal or encapsulation of materials containing lead, as well as alterations and repairs including painting and decorating. The standard defines the occupationally permissible exposure limit and specific requirements for construction work with and in lead materials. OSHA does not have a percentage lead in paint action level in their current construction lead standard. OSHA considers the lead regulation enforceable if the presence of *any* lead in paint at detectable concentrations is present when demolition or renovation activities are performed. Any abatement of the lead-based paint or cutting, sanding, and/or grinding of the structures painted with lead based paint (LBP) should be performed in accordance with OSHA regulations.

Demolition activities are regulated under the NESHAP statute for general dust control. Specifications for the proper work practices, controls and disposal should be developed to document compliance with all applicable regulations.

## **5.0 FINDINGS AND RECOMMENDATIONS**

### **5.1 Asbestos**

Seventeen (17) bulk samples were collected from five (5) homogeneous areas of suspect ACM. A summary of suspect ACM is provided in the following table, along with the results from the laboratory. The analytical results are included in **Appendix A**.

**NESHAP Asbestos and Protective Coatings Survey Report**  
**Hernando DeSoto Bridge (No. 130053)**  
**FPID: 425033-1-22-01**  
**Page 5 of 6**

**Table 1: Summary of ACM**  
**Hernando DeSoto Bridge - FDOT Structure No. 130053**

Homo. No.	Sample No.	Material Description	Approx. Quantity	Lab Results % Asbestos	NESHAP Category
A	1	Residual tar paper strips on underside of decking from construction form joints	Not Measured	<1% Chrysotile	N/A
	2				
	3				
B	4	Tar paper at end bents between bridge decking	500 ft <sup>2</sup>	1.5% Chrysotile	RACM
	5				
	6				
C	7	Black expansion joint filler	Not Measured	Not Detected	N/A
	8				
	9				
D	10	Adhesive for reflectors	Not Measured	Not Detected	N/A
	11				
	12				
E	13	Concrete from deck, piles and caps	Not Measured	Not Detected	N/A
	14				
	15				
	17				

One of the seventeen (17) samples tested had asbestos mineral fibers at levels greater than 1 percent. The black tar paper located between the end bents and the bridge decking contained 1.5% chrysotile asbestos. The material was observed to be friable and thus when disturbed as a result of renovations or demolitions would be classified as RACM per NESHAP. The tar paper was not readily observed on intermediate bent caps; however, visual inspection of these areas were limited due to access.

Additionally, residual tar paper strips, approximately 2 inches in width and of various lengths (typically several feet long), were observed on the underside of the decking. These residual strips were found to contain less than 1% chrysotile asbestos. The strips were presumably used to tape cracks in the plywood deck forms at the joints where the sheets abutted and remained adhered to the concrete after the removal of the forms. This material is not ACM per EPA since it is below the 1% threshold.

It should be noted that suspect materials, other than those identified during the survey could exist within the structure in areas not accessible to the inspector at the time of the survey. Should suspect materials other than those which were identified during this survey be uncovered during the renovation/demolition process, those materials should be assumed to be ACM until sampling and analysis can confirm or refute their asbestos content.

**FPID: 425033-1-22-01**  
**Page 6 of 6**

## 5.2 Protective Coating/Lead Based Paint

The steel bearing plates at the bridge we observed to be painted. One (1) composite sample of paint was analyzed to determine the content of select heavy metals historically used in paints. The sample was analyzed for lead, cadmium, chromium and zinc. The paint did not contain lead in a quantity to meet EPA's definition of Lead Based Paint (LBP). A summary of the results are provided in the table below.

**Table 2: Grab Sample Total Metals**

Sample No.	Location	Lead mg/kg	Cadmium mg/kg	Chromium mg/kg	Zinc mg/kg
1	Silver paint on bearing plate	399	25.3	69.5	4,710

Based on the results for the total concentration of the metals, it does not appear that the coating materials would be classified as a hazardous waste per 40 CFR 261. This is dependent on whether the paint is removed as a separate paint waste or in combination with the bearing plates. Recycling the bearing plates as a whole, likely offers the best solution since recycled metals are generally exempt for the 40 CFR 261 requirements since they are not considered a "Solid Waste" but rather a recycled material. Prior to disposal of any waste paint materials, a TCLP analysis of the waste should be performed to make a final determination.

## 6.0 GENERAL COMMENTS

This survey was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions in the same locale, with the limitation noted above. The results, findings, conclusions and recommendations expressed in this report are based on conditions observed during our survey of the subject bridge structure. The information contained in this report is relevant to the date on which this survey was performed, and should not be relied upon to represent conditions at a later date. Tierra does not warrant the work of regulatory agencies, laboratories or other third parties supplying information which may have been used in the preparation of this report. No warranty, express or implied, is made.

Dove Environmental Corporation is solely responsible for analysis performed on sample content supplied by client and method 40 CFR Part 763 Subpart F App. EPA/600/R-93/116. Measurement Uncertainty information is available by contacting the Laboratory. Laboratory Reports will be kept for a period of three (3) years electronically. Percentages are visually estimated. Point count performed at clients request only. Results relates only to item analyzed. This report should not be reproduced by client or anyone without written permission from Dove Environmental Corporation. All samples will be stored for a period of 1 month. Our laboratory uses various microscopes and is NVLAP accredited. Floor-Tile is non-homogeneous and results only reflect sample content.

**DATA QUALIFIER CODES**

State of Florida, Department of Environmental Protection and  
Department of Health Rehabilitative Services / NELAC

---

- I** The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J** Estimated value; value not accurate. This code shall be used in the following instances:
1. Surrogate recovery limits have been exceeded.
  2. No known quality control criteria exists for the component.
  3. The reported value did not meet the established quality control criteria for either precision or accuracy but falls within the NELAC marginal exceedance range.
  - 3M. The reported value did not meet the established quality control criteria for either precision or accuracy and falls beyond the NELAC range for marginal exceedances.
  - 3R. The RPD for the LCSD exceeds the laboratory established control limits.
  4. The sample matrix interfered with the ability to make an accurate determination.
  5. The data is questionable because of improper laboratory or field protocols (e.g. composite sample was collected instead of a grab sample).
- L** Off-scale high. Actual value is known to be greater than the value given. To be used when the concentration of the analyte is above the acceptable limit for quantitation (exceeds the linear range of the highest calibration standard) and the calibration curve is known to exhibit a negative deflection.
- Q** Sample held beyond acceptable holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for the sample preparation or analysis.
- U** Indicates that the compound was analyzed for but not detected above the method detection limit (MDL).
- V** Indicates that the analyte was detected in both the sample and the associated method blank. Note: The value in the blank shall not be subtracted from associated samples.
- Y** The laboratory analysis was from an unpreserved or improperly preserved sample. The data may not be accurate.
- 

RL - Reporting Limit. The PEL lowest Practical Quantitation Limit (PQL), defined by the lowest point in the calibration curve.

**CASE NARRATIVE  
METALS**

**Spectrum Analytical Inc. Lab Reference No./SDG:** 3503559

**Client:** Crandall

**I. RECEIPT**

Exceptions encountered upon receipt are addressed in the Sample Receipt Confirmation Report, included with the Chain-of-Custody documentation, or communication included in the addendum with this package.

**II. HOLDING TIMES**

**A. Sample Preparation:** All holding times were met.

**B. Sample Analysis:** All holding times were met.

**III. METHOD**

Analyses were performed according to the Spectrum Analytical Inc. Standard Operating Procedures and EPA Method 6010B for ICP metals.

**IV. PREPARATION**

Soil samples were prepared according to PEL Laboratory's Standard Operating Procedures and EPA Method 3050B.

**V. ANALYSIS**

**A. Calibration:**

All acceptance criteria were met.

**B. Blanks:**

**1. Calibration Blanks:**

All acceptance criteria were met.

**2. Method Blanks:**

All acceptance criteria were met.

**C. Spikes:**

**1. Laboratory Control Spikes (LCS):**

An LCS/LCSD set was analyzed.  
All percent recovery and relative percent difference (RPD) criteria were met.

**2. Post Digestion Spike:**

All acceptance criteria were met with the exception of:

**CASE NARRATIVE  
METALS**

**Spectrum Analytical Inc. Lab Reference No./SDG:** 3503559

**Client:** Crandall

Post Digestion Spike 350355901A was analyzed with the soil samples on 07/20/11. The following analyte(s) were recovered below criteria: Lead at 43.6 % with criteria of (80-120). The most probable cause for the PDS exceeding limits is sample matrix due to the fact that the LCS/LCSD pass all quality control criteria. No further action was taken.

**3. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD):**

No spikes requested by client.

**D. Duplicate:**

No sample duplicates are reported with this method. (Spike duplicates are referenced above in section C. Spikes.)

**E. Serial Dilution:**

All acceptance criteria were met.

**F. ICP Interference Check Samples:**

All acceptance criteria were met.

**G. Samples:**

Sample analysis proceeded normally.

Sample Sample 1 required a 25X dilution due to high concentration of the following analyte(s): Zinc.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum Analytical Inc., both technically and for completeness, except for the conditions noted above. Work Assignment No: 027  
Tierra Project No.: 6512-11-011

Mr. Burkhart:

The purpose of this report is to present the results of an asbestos survey and protective coating survey performed on July 13, 2011, at the above referenced project. We understand that this survey was requested due to the planned renovation and/or demolition of the structure.

**Regulated Asbestos Containing Materials (RACM) were identified at the site. Please refer to the attached report for details.**

Tierra appreciates the opportunity to provide this service to HNTB. If you have any questions regarding this report, please contact our office at your earliest convenience.

Respectfully Submitted,

**TIERRA INC.**

## EXECUTIVE SUMMARY

Tierra, Inc. (Tierra) conducted an asbestos and protective coating survey of the Hernando Desoto Bridge, which crosses the Manatee River. The structure is located on US 41, in Manatee County, Florida. The bridge is identified as FDOT Structure Number 130053. It is our understanding that the FDOT is planning to renovate and/or demolish the bridge structure. The purpose of this survey was to identify and sample suspect asbestos-containing materials (ACM) and heavy metals based protective coatings to provide information regarding the identity, location, condition and approximate quantities of these materials so that proper remediation and disposal methods can be evaluated.

The survey was conducted on July 13, 2011 by an Asbestos Hazard Emergency Response Act (AHERA) accredited inspector in general accordance with the sampling protocols established in Environmental Protection Agency (EPA) 40 Code of Federal Regulations (CFR) 763. Seventeen (17) bulk samples were collected from five (5) homogeneous areas of suspect ACM. Chrysotile asbestos was identified at 1.5% in the felt paper located between the end bents and the bridge decking. This material was determined to be friable and classified as Regulated Asbestos Containing Material (RACM) per National Emission Standards for Hazardous Air Pollutants (NESHAP). Additionally, residual felt paper strips, observed on the underside of the decking, were found to contain less 1% chrysotile asbestos. The strips were presumably used to tape cracks in the deck forms and remained adhered to the concrete after the removal of the forms.

Steel bearing plates at the bridge we observed to be painted. The paint did not contain lead in a quantity to meet EPA's definition of Lead Based Paint (LBP).

## **1.0 INTRODUCTION**

Tierra, Inc. (Tierra) conducted an asbestos and protective coating survey of the Hernando Desoto Bridge, which crosses the Manatee River. The structure is located on US 41, in Manatee County, Florida. The bridge is identified as FDOT Structure Number 130053. The survey was conducted on July 13, 2011 by an Asbestos Hazard Emergency Response Act (AHERA) accredited asbestos inspector. Suspect asbestos-containing material (ACM) samples were collected in general accordance with the sampling protocols outlined in EPA regulation 40 CFR 763. Samples were delivered to an accredited laboratory for analysis by polarized light microscopy.

### **1.1 Project Objective**

We understand this asbestos survey was requested due to the planned renovation and/or demolition of the existing bridge structure. EPA regulation 40 CFR 61, Subpart M, National Emission Standards for Hazardous Air Pollutants (NESHAP), prohibits the release of asbestos fibers and other hazardous air pollutants to the atmosphere during renovation or demolition activities. The asbestos NESHAP requires that potentially regulated asbestos-containing building materials be identified, classified and quantified prior to planned disturbances or demolition activities. No previous reports or design plans were provided.

## **2.0 BRIDGE DESCRIPTION**

The date for the construction of the bridge is unknown. The bridge is a cast in place, concrete beam, raised span bridge, consisting of four (4) lanes, two lanes servicing north and south bound traffic. It is approximately 2,250 feet in length and 60 feet in width. It is constructed on driven concrete piles with concrete piers and bent caps supporting concrete beams and a cast in place concrete bridge deck. Both sides are lined with concrete curbing and concrete guardrails. Guardrails at the approaches are galvanized "W" channel steel on wood posts.

## **3.0 FIELD ACTIVITIES**

The survey was conducted by Mr. Scott Crandall, PE, an AHERA-accredited asbestos inspector. A copy of Mr. Crandall's asbestos inspector certificate is presented in **Appendix C**. The survey was conducted in general accordance with the sample collection protocols established in EPA regulation 40 CFR 763, the AHERA. A summary of the survey activities performed is provided below. The survey was limited to areas accessible by foot and included the bridge surface and underneath the structure at both end of the bridge.

### **3.1 Visual Assessment**

Our survey activities began with visual observation of the structure to identify homogeneous areas of suspect ACM and painted coatings. A homogeneous material consists of building materials that appear similar throughout in terms of color, texture and date of application. Building materials identified as steel, concrete, glass, wood, masonry, metal or rubber were not considered suspect ACM. If surfaces are painted and/or otherwise covered with protective coating those materials are noted and sampled.

### 3.2 Physical Assessment

A physical assessment of each homogeneous area of suspect ACM was conducted to assess the friability and condition of the materials. A friable material is defined by the EPA as a material which can be crumbled, pulverized or reduced to powder by hand pressure when dry. Friability was assessed by physically touching suspect materials.

### 3.3 Sample Collection

Based on results of the visual observation, bulk samples of suspect ACM and protective coatings were collected in general accordance with AHERA sampling protocols. Representative samples of suspect materials were collected in each homogeneous area. Tierra personnel collected bulk samples using wet methods as applicable to reduce the potential for fiber release. Samples were placed in sealable containers and labeled with unique sample numbers using an indelible marker.

Seventeen (17) bulk samples were collected from five (5) homogeneous materials of suspect ACM. A summary of suspect ACM samples collected during the survey is included in Section 5.0.

A visual inspection of the structure for protective coatings and painted surfaces indicated the steel bearing plates were painted. One (1) sample of the paint was collected for heavy metals analysis.

### 3.4 Sample Analysis

Bulk samples of ACM were submitted under chain of custody to Dove Environmental Corporation (Dove) of Miami, Florida for analysis by polarized light microscopy with dispersion staining techniques per EPA methodology (40 CFR 763, Subpart F). The percentage of asbestos, where applicable, was determined by microscopic visual estimation. Dove is accredited under the National Voluntary Laboratory Accreditation Program (NVLAP Accreditation No. 102053-0).

The U.S. Environmental Protection Agency (USEPA) and the Occupational Safety and Health Administration (OSHA) define asbestos containing material (ACM) as any material which contains greater than one percent asbestos. When samples analyzed by Polarized Light Microscopy contain asbestos in amounts less than ten percent (< 10%), a more exact method of analysis called point counting may be performed at the client's request. The EPA point count method allows a sample in which asbestos was visually detected, but which is visually estimated to have 10% or less asbestos, to be quantified using a point count procedure. If not point counted, a sample in which asbestos was visually detected and estimated (including trace to  $\leq 1\%$ ) must be assumed to be greater than 1% and treated as an ACM. The EPA point counting procedure is as follows: an ocular reticule (cross hair or point array) is used to visually superimpose a point or points on the microscope field of view. A total of 400 points superimposed on either asbestos fibers or non-asbestos matrix material must be counted over at least eight different preparations of representative sub-samples. If an asbestos fiber and matrix particle overlap so that a point is superimposed on their visual intersection, a point is scored for both categories. Point counting provides a quantification of the area percent asbestos. Per EPA's regulations, materials which have been point-counted and, therefore, quantitatively determined to have less than or equal to one percent ( $\leq 1\%$ ) asbestos, can be treated as non-ACM. **No samples were point counted during this survey.**

## **4.0 REGULATORY OVERVIEW**

### **4.1 Asbestos Regulations**

The asbestos NESHAP (40 CFR Part 61, Subpart M) regulates asbestos fiber emissions and asbestos waste disposal practices. It also requires the identification and classification of existing building materials prior to demolition or renovation activity. Under NESHAP, asbestos-containing building materials are classified as either friable, Category I non-friable or Category II non-friable ACM. Friable materials are those that, when dry, may be crumbled, pulverized or reduced to powder by hand pressure. Category I non-friable ACM includes packings, gaskets, resilient floor coverings and asphalt roofing products containing more than 1% asbestos. Category II non-friable ACM are any materials other than Category I materials that contain more than 1% asbestos.

Friable ACM, Category I and Category II non-friable ACM which are in poor condition and has become friable or which will be subjected to drilling, sanding, grinding, cutting or abrading and which could be crushed or pulverized during anticipated renovation or demolition activities are considered regulated ACM (RACM).

In the State of Florida, asbestos activities are regulated by the Florida Department of Environmental Protection (FDEP). RACM must be removed prior to demolition activities which will disturb the materials. The owner or operator must provide the FDEP with written notification of planned removal activities at least 10 working days prior to the commencement of asbestos abatement activities. Removal of RACM must be conducted by a State of Florida licensed asbestos abatement contractor.

The OSHA Asbestos standard for construction (29 CFR 1926.1101) regulates workplace exposure to asbestos. The OSHA standard requires that employee exposure to airborne asbestos fibers be maintained below 0.1 asbestos fibers per cubic centimeter of air (0.1 f/cc). The OSHA standard classifies construction and maintenance activities which could disturb ACM, and specifies work practices and precautions which employers must follow when engaging in each class of regulated work.

### **4.2 Metals Based Protective Coatings and Lead Based Paint Regulations**

Cadmium, chromium, zinc and lead have historically been used in paints and coating. Specific regulations regarding lead based paints have been developed by the USEPA. Lead-based paint is defined as a surface coating or paint containing lead in excess of 1.0 milligram per square centimeter ( $\text{mg}/\text{cm}^2$ ) or 0.5% by weight (USEPA Toxic Substance Control Act, Section 401). 0.5% is equivalent to 5000 parts per million (ppm). Based on regulations contained in the Lead-Based Paint Poisoning Prevention Act (LBPPPA) and promulgated by the Consumer Product Safety Commission (CPSC), lead-based paint is defined as paint containing more than 0.06% lead as of June 1977. In 1978, the CPSC banned the sale of lead-based paint to consumers.

Under EPA regulations lead, chromium and cadmium impacted wastes generated during abatement activities are handled as either a solid waste or a hazardous waste, depending on the amount and form of each of the heavy metals. If the maximum level of the metal in an extract of a representative sample of the waste stream proposed for disposal, as determined by

**NESHAP Asbestos and Protective Coatings Survey Report**

**Hernando DeSoto Bridge (No. 130053)**

**FPID: 425033-1-22-01**

**Page 4 of 6**

a Toxicity Characteristic Leaching Procedure (TCLP) laboratory analysis, is less than the regulatory level set in 40 CFR 261.24, then EPA regulations allow the material to be disposed of as solid waste at a solid waste landfill. If the TCLP analysis equals or exceeds the regulatory level, the material must be managed as a hazardous waste. The regulatory levels for cadmium, chromium and lead are 1.0, 5.0 and 5.0 milligram per liter (mg/L), respectively. Impacted materials that are recycled, such as painted steel beams sent to a scrap metal yard, are not considered waste; therefore, they are exempt from waste disposal regulations; however, other occupational and recycling regulations may apply.

The OSHA established the Lead Standard for the Construction Industry, 29 CFR 1926.62, which applies to all construction work where an employee may be exposed to lead. These exposures include demolition and salvage of structures where lead or material containing lead are present and removal or encapsulation of materials containing lead, as well as alterations and repairs including painting and decorating. The standard defines the occupationally permissible exposure limit and specific requirements for construction work with and in lead materials. OSHA does not have a percentage lead in paint action level in their current construction lead standard. OSHA considers the lead regulation enforceable if the presence of *any* lead in paint at detectable concentrations is present when demolition or renovation activities are performed. Any abatement of the lead-based paint or cutting, sanding, and/or grinding of the structures painted with lead based paint (LBP) should be performed in accordance with OSHA regulations.

Demolition activities are regulated under the NESHAP statute for general dust control. Specifications for the proper work practices, controls and disposal should be developed to document compliance with all applicable regulations.

## **5.0 FINDINGS AND RECOMMENDATIONS**

### **5.1 Asbestos**

Seventeen (17) bulk samples were collected from five (5) homogeneous areas of suspect ACM. A summary of suspect ACM is provided in the following table, along with the results from the laboratory. The analytical results are included in **Appendix A**.

**NESHAP Asbestos and Protective Coatings Survey Report**  
**Hernando DeSoto Bridge (No. 130053)**  
**FPID: 425033-1-22-01**  
**Page 5 of 6**

**Table 1: Summary of ACM**  
**Hernando DeSoto Bridge - FDOT Structure No. 130053**

Homo. No.	Sample No.	Material Description	Approx. Quantity	Lab Results % Asbestos	NESHAP Category
A	1	Residual tar paper strips on underside of decking from construction form joints	Not Measured	<1% Chrysotile	N/A
	2				
	3				
B	4	Tar paper at end bents between bridge decking	500 ft <sup>2</sup>	1.5% Chrysotile	RACM
	5				
	6				
C	7	Black expansion joint filler	Not Measured	Not Detected	N/A
	8				
	9				
D	10	Adhesive for reflectors	Not Measured	Not Detected	N/A
	11				
	12				
E	13	Concrete from deck, piles and caps	Not Measured	Not Detected	N/A
	14				
	15				
	17				

One of the seventeen (17) samples tested had asbestos mineral fibers at levels greater than 1 percent. The black tar paper located between the end bents and the bridge decking contained 1.5% chrysotile asbestos. The material was observed to be friable and thus when disturbed as a result of renovations or demolitions would be classified as RACM per NESHAP. The tar paper was not readily observed on intermediate bent caps; however, visual inspection of these areas were limited due to access.

Additionally, residual tar paper strips, approximately 2 inches in width and of various lengths (typically several feet long), were observed on the underside of the decking. These residual strips were found to contain less 1% chrysotile asbestos. The strips were presumably used to tape cracks in the plywood deck forms at the joints where the sheets abutted and remained adhered to the concrete after the removal of the forms. This material is not ACM per EPA since it is below the 1% threshold.

It should be noted that suspect materials, other than those identified during the survey could exist within the structure in areas not accessible to the inspector at the time of the survey. Should suspect materials other than those which were identified during this survey be uncovered during the renovation/demolition process, those materials should be assumed to be ACM until sampling and analysis can confirm or refute their asbestos content.

## 5.2 Protective Coating/Lead Based Paint

The steel bearing plates at the bridge we observed to be painted. One (1) composite sample of paint was analyzed to determine the content of select heavy metals historically used in paints. The sample was analyzed for lead, cadmium, chromium and zinc. The paint did not contain lead in a quantity to meet EPA's definition of Lead Based Paint (LBP). A summary of the results are provided in the table below.

**Table 2: Grab Sample Total Metals**

Sample No.	Location	Lead mg/kg	Cadmium mg/kg	Chromium mg/kg	Zinc mg/kg
1	Silver paint on bearing plate	399	25.3	69.5	4,710

Based on the results for the total concentration of the metals, it does not appear that the coating materials would be classified as a hazardous waste per 40 CFR 261. This is dependent on whether the paint is removed as a separate paint waste or in combination with the bearing plates. Recycling the bearing plates as a whole, likely offers the best solution since recycled metals are generally exempt for the 40 CFR 261 requirements since they are not considered a "Solid Waste" but rather a recycled material. Prior to disposal of any waste paint materials, a TCLP analysis of the waste should be performed to make a final determination.

## 6.0 GENERAL COMMENTS

This survey was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession currently practicing under similar conditions in the same locale, with the limitation noted above. The results, findings, conclusions and recommendations expressed in this report are based on conditions observed during our survey of the subject bridge structure. The information contained in this report is relevant to the date on which this survey was performed, and should not be relied upon to represent conditions at a later date. Tierra does not warrant the work of regulatory agencies, laboratories or other third parties supplying information which may have been used in the preparation of this report. No warranty, express or implied, is made.

### DATA QUALIFIER CODES

State of Florida, Department of Environmental Protection and  
Department of Health Rehabilitative Services / NELAC

---

- I** The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
- J** Estimated value; value not accurate. This code shall be used in the following instances:
1. Surrogate recovery limits have been exceeded.
  2. No known quality control criteria exists for the component.
  3. The reported value did not meet the established quality control criteria for either precision or accuracy but falls within the NELAC marginal exceedance range.
  - 3M. The reported value did not meet the established quality control criteria for either precision or accuracy and falls beyond the NELAC range for marginal exceedances.
  - 3R. The RPD for the LCSD exceeds the laboratory established control limits.
  4. The sample matrix interfered with the ability to make an accurate determination.
  5. The data is questionable because of improper laboratory or field protocols (e.g. composite sample was collected instead of a grab sample).
- L** Off-scale high. Actual value is known to be greater than the value given. To be used when the concentration of the analyte is above the acceptable limit for quantitation (exceeds the linear range of the highest calibration standard) and the calibration curve is known to exhibit a negative deflection.
- Q** Sample held beyond acceptable holding time. This code shall be used if the value is derived from a sample that was prepared or analyzed after the approved holding time restrictions for the sample preparation or analysis.
- U** Indicates that the compound was analyzed for but not detected above the method detection limit (MDL).
- V** Indicates that the analyte was detected in both the sample and the associated method blank. Note: The value in the blank shall not be subtracted from associated samples.
- Y** The laboratory analysis was from an unpreserved or improperly preserved sample. The data may not be accurate.
- 

RL - Reporting Limit. The PEL lowest Practical Quantitation Limit (PQL), defined by the lowest point in the calibration curve.

**CASE NARRATIVE  
METALS**

**Spectrum Analytical Inc. Lab Reference No./SDG: 3503559**

**Client:** Crandall

**I. RECEIPT**

Exceptions encountered upon receipt are addressed in the Sample Receipt Confirmation Report, included with the Chain-of-Custody documentation, or communication included in the addendum with this package.

**II. HOLDING TIMES**

**A. Sample Preparation:** All holding times were met.

**B. Sample Analysis:** All holding times were met.

**III. METHOD**

Analyses were performed according to the Spectrum Analytical Inc. Standard Operating Procedures and EPA Method 6010B for ICP metals.

**IV. PREPARATION**

Soil samples were prepared according to PEL Laboratory's Standard Operating Procedures and EPA Method 3050B.

**V. ANALYSIS**

**A. Calibration:**

All acceptance criteria were met.

**B. Blanks:**

**1. Calibration Blanks:**

All acceptance criteria were met.

**2. Method Blanks:**

All acceptance criteria were met.

**C. Spikes:**

**1. Laboratory Control Spikes (LCS):**

An LCS/LCSD set was analyzed.  
All percent recovery and relative percent difference (RPD) criteria were met.

**2. Post Digestion Spike:**

All acceptance criteria were met with the exception of:

**CASE NARRATIVE  
METALS**

**Spectrum Analytical Inc. Lab Reference No./SDG: 3503559**

**Client:** Crandall

Post Digestion Spike 350355901A was analyzed with the soil samples on 07/20/11. The following analyte(s) were recovered below criteria: Lead at 43.6 % with criteria of (80-120). The most probable cause for the PDS exceeding limits is sample matrix due to the fact that the LCS/LCSD pass all quality control criteria. No further action was taken.

**3. Matrix Spike/Matrix Spike Duplicate Samples (MS/SD):**

No spikes requested by client.

**D. Duplicate:**

No sample duplicates are reported with this method. (Spike duplicates are referenced above in section C. Spikes.)

**E. Serial Dilution:**

All acceptance criteria were met.

**F. ICP Interference Check Samples:**

All acceptance criteria were met.

**G. Samples:**

Sample analysis proceeded normally.  
Sample Sample 1 required a 25X dilution due to high concentration of the following analyte(s): Zinc.

I certify that this data package is in compliance with the terms and conditions agreed to by the client and Spectrum Analytical Inc., both technically and for completeness, except for the conditions noted above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or designated person, as, verified by the following signature.

# SAMPLE RECEIPT CONFIRMATION SHEET

Client Information			
SDG:	3503559	Req:	90612
Client:	Crandall	Project:	Generic
Level:	1	Date Rec'd:	7/18/2011 8:30:00 AM
Rec'd via:	Courier	Due Date:	7/25/2011

Sample Verification			
Samples/Cooler Secure?	<input type="text" value="Yes"/>	All Samples on COC accounted For?	<input type="text" value="Yes"/>
Temperature of Samples(Celsius)	<input type="text" value="ambient"/>	All Samples Rec'd Intact?	<input type="text" value="Yes"/>
pH Verified?	<input type="text" value="No"/>	Sample Vol. Sufficient For Analysis	<input type="text" value="Yes"/>
pH WNL?	<input type="text" value="No"/>	Samples Rec'd W/ Hold Time?	<input type="text" value="Yes"/>
Soil Origin (Domestic/Foreign):	<input type="text" value="Domestic"/>	Are All Samples to be Analyzed?	<input type="text" value="Yes"/>
Site Location/Project on COC?	<input type="text" value="Yes"/>	Correct Sample Containers?	<input type="text" value="Yes"/>
Client Project # on COC?	<input type="text" value="Yes"/>	COC Comments written on COC?	<input type="text" value="Yes"/>
Project Mgr. Indicated on COC?	<input type="text" value="Yes"/>	Samplers Initials on COC?	<input type="text" value="Yes"/>
COC relinquished/Dated by Client?	<input type="text" value="Yes"/>	Sample Date/Time Indicated?	<input type="text" value="Yes"/>
COC Received/Dated by PEL?	<input type="text" value="Yes"/>	TAT Requested:	<input type="text" value="STD"/>
Specific Subcontract Indicated?	<input type="text" value="No"/>	Client Requests Verbal Results?	<input type="text" value="No"/>
Samples Received By	<input type="text" value="Courier"/>	Client Requests Faxed Results?	<input type="text" value="No"/>
PEL to Conduct ALL Analyses?	<input type="text" value="Yes"/>		
Radioactivity Check?	<input type="text" value="No"/>		
COC Present?	<input type="text" value="Yes"/>		

PEER REVIEW:

Monday, July 18, 2011

Page 1 of 1

## APPENDIX B

Photograph Log

DRAFT

Homogeneous Material A – Residual tar paper

Homogenous Material B – Black tar paper between decking and end bent

Homogeneous Material C – Poured joint filler at expansion joints on decking

Homogeneous Material D – Adhesive for reflectors

Homogeneous Material E – Various concrete elements

## APPENDIX C

### Personnel Training Certificates

DRAFT

Vern Roberts Environmental Training, Inc.  
13987 94<sup>th</sup> Avenue N Seminole, FL 33776  
727-593-3067  
Asbestos Contractor Supervisor Refresher Training

This is to Certify that  
Scott Crandall

Training was in accordance with Title II of TSCA, 40 CFR Part  
763. Appendix C to Subpart E as revised  
Date of Examination 10/8/10

Date of Course: 10/8/10 Expiration Date 10/8/11  
Certificate # 10081004 CM Points: 1.0  
Course # FL490006321 Provider # FL490003810
